

Crosswalks

Opportunities

*What they can provide
to a streetscape:*

- Safer crossing for pedestrians
- Traffic calming, reduction of traffic speed
- Crosswalks can be integrated with curb extensions to reduce crossing distance and provide additional sidewalk space for other streetscape improvements like seating areas, planters, bike parking, street trees, etc, or they can be as simple as a painted area across the street

Challenges

- Without signalization, they can create a false sense of security for pedestrians, pedestrians still need to use caution crossing the street
- Need lighting to make pedestrians visible at night to oncoming motorists
