Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	Y

Chemical Name:	SEALER
Physical Description:	LIQUID
Case Number:	0000078933
Facility Id:	036161
Physical State Of The Substance:	2
Average Amount Possessed During The Year Code:	10
Maximum Amount Possessed During The Year Code:	11
Applicable Unit Of Measure Code:	2
Description Of The Unit Of Measure:	GALLONS
Type Code:	F
Description:	CAN
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365

SHERWIN WILLIAMS CO #9820 (Continued) **S104066466**

Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	200-499
Most Hazardous Ingridient:	METHYL ETHYL KETONE
United Nations/north America 4 Digit Class Number:	1263
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Flammable and Combustible Liquid
Second Hazardous Class Code For Chemical:	Acute Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	3.0
Hazard Class 2 Of The Chemical:	6.3
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: NA
. Waste name: NA

. Waste code: NONE
. Waste name: None

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P042
. Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)- (OR) EPINEPHRINE

. Waste code: P075
. Waste name: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

. Waste code: P081
. Waste name: 1,2,3-PROPANETRIOL, TRINITRATE (R) (OR) NITROGLYCERINE (R)

. Waste code: P188
. Waste name: BENZOIC ACID, 2-HYDROXY-, COMPD. WITH (3AS-CIS)-1,2,3,3A,8,8A-HEXAHYDRO-1,3A,8-TRIMETHYLPYRROLO[2,3-B]INDOL-5-YL METHYLCARBAMATE ESTER (1:1) (OR) PHYSOSTIGMINE SALICYLATE

EMANUEL HOSPITAL AND HEALTH CENTER (Continued) **1004769858**

. Waste code: U058
. Waste name: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-, 2-OXIDE (OR) CYCLOPHOSPHAMIDE

. Waste code: U132
. Waste name: HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-

. Waste code: U154
. Waste name: METHANOL (I) (OR) METHYL ALCOHOL (I)

. Waste code: U188
. Waste name: PHENOL

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 7822

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 50

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 10

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 5190

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 5200

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 5190

NORTH WILLIAMS APARTMENTS (Continued) **S103842233**

Updated Date: 11/13/2019
Decode for NarcdID: Contamination
NARR Comments: MTPugh 11/13/19 Contaminated areas described below were addressed through building demolition and soil removal. (2/2/1998 SAM/VCP) A former manufacturer of industrial batteries that later functioned as a distributor of and collection facility for old industrial batteries. Old acid tanks and other manufacturing equipment were dismantled. DEQ's Northwest Region carried out a RCRA inspection in 1992, which noted potential contamination from past practices, including lead contamination of walls, floors, and other surfaces; soil contamination on the property and perhaps on adjacent properties; a surface area around a drywell that was stained yellow with dead and stressed grass; and a UST. The facility owner began excavating around the drywell in 1993, which had received sulfuric acid waste/rinsate from the inside of the building. Tests on the excavated soil indicated that it was a RCRA hazardous waste (TCLP lead > 5 mg/L).

Created Date: 12/17/2002
Updated By: MPUGH
Updated Date: 09/05/2019
Decode for NarcdID: Remedial Action
NARR Comments: 9/5/19 MTPugh Port City LLC completed a remedial action per a DEQ-approved remedial action plan. The remedial action was designed to remove residual lead and petroleum-impacted soil left in place from the former Wagstaff Battery Manufacturing Company, a former occupant of the site. It was conducted to satisfy DEQ requirements to receive a No Further Action (NFA) and determination from DEQ and remove the existing Easement and Equitable Servitude (E&ES) from the property deed. Remedial actions included the demolition of former Buildings B and C , removal of the concrete floor slab, removal by excavation of areas of known contamination of contaminants of concern (COCs) above applicable DEQ risk-based concentrations (RBCs) from former sump discharge areas at Sumps 1 and 1A, Sump 2, the pocket soil area located in the north parking lot, and removal of undocumented fill material not suitable for structural fill and found to contain debris with high concentrations of lead. (2/2/1998 SAM/VCP) Once it was determined that the stockpiled soil was a hazardous waste, DEQ’s RCRA Section began working with the owner/operator to ensure proper disposition of the soil. The stockpile consisted of about 130 yards, and the first attempt at on-site lead stabilization, conducted in the spring of 1995, failed. In October 1995, the owner/operator planned to conduct another treatment on the pile, and return the soil to the open excavation pit (former drywell) if tests were to show TCLP lead <5mg/L. This backfilling would require a <quot>landfill<quot> permit from DEQ’s Solid Waste Section. On several occasions, the owner/operator declined participation in the Voluntary Cleanup Program. DEQ believes

NORTH WILLIAMS APARTMENTS (Continued) **S103842233**

contaminated soil remains in the excavation pit, and there is little, if any, documentation on confirmation sampling. In addition, placement of the soil back in the hole, even after treatment, will create a low-concentration source area for lead. (6/27/05 TER/VCP) As part of site redevelopment, Port City Development Center completed investigation and soil cleanup activities with oversight by DEQ's Voluntary Cleanup Program. Port City Development Center removed lead-contaminated soil outside the building to concentrations protective of human health. The contaminated soil was trucked to a permitted landfill for disposal. Contamination under the building could not be removed without compromising the building foundation. Some contaminated soil remains in place, capped by the concrete floor of the building or by asphalt, which prevents migration of contaminated soil to adjacent properties or exposure to people working or living at the facility. An Environmental Notice and an Easement and Equitable Servitude (E&ES) are recorded with Multnomah County for the property. These documents state that the property owner cannot expose soil in the capped areas without DEQ approval, notification to workers, and appropriate management of any excavated contaminated soil. Conditions in the DEQ No Further Action determination for the site call for future compliance with the provisions of the Environment Notice and E&ES.

Created Date: 12/03/2018
Updated By: MPUGH
Updated Date: 11/13/2019
Decode for NarcdID: Current Site Summary Statement
NARR Comments: MTPugh 11/13/19 Based on the available information, Site conditions are protective of public health and the environment for future residential use. The Site requires no further action under the Oregon Environmental Cleanup Law, ORS 465.200 et seq. unless new or previously undisclosed information becomes available, there are changes in Site development or land and water uses, or more contamination is discovered. DEQ further concludes that contamination that previously had warranted institutional and environmental controls has been addressed, such that the E&ES can be removed from the property deed. While the cleanup removed all known contamination that presented a potential risk to Site users, there is the potential for residual contamination to exist. Should contaminated soil be encountered during development it should be managed per the Contaminated Media Management Plan (CMMP) and all applicable local, County, State and Federal regulations. MTPugh 9/17/19 Port City LLC completed a cleanup of the former Wagstaff Battery Co. property located at 2140 N. Williamas Avenue (formerly identified as 2124 N. Williams) in Portland. The Oregon Department of Environmental Quality is preparing to certify that all actions required under a Consent Judgment with DEQ have been satisfactorily completed, and is proposing to issue a Certificate of Completion and a No Further Action determination. Interested parties may send comments to Mark Pugh at 700 NE Multnomah St., Suite 600, Portland, OR 97232 or pugh.mark@deq.state.or.us. Comments must be submitted by 5 p.m., Thursday, Oct. 31, 2019. Tax Lot 1000 under terms of a Prospective Purchaser Agreement with DEQ. DEQ is holding a public comment period in December 2018 to announce its proposal to issue a Certification of

NORTH WILLIAMS APARTMENTS (Continued) **S103842233**

Completion and a No Further Action determination for that property. MTPugh 12/3/18 The Oregon Department of Environmental Quality invites comments on its proposed consent judgment amendment to a prospective purchaser agreement entered into with Port City LLC July 24, 2017 regarding real property located at 2124 N Williams Ave., Portland. The amendment is to accommodate additional time needed for acquiring the property. Comments are due by 5 p.m., January 4, 2019. RWA 2/19/2019 Oregon DEQ and BRIDGE Housing invited public comments on the Proposed Analysis of Brownfield Cleanup Alternatives (ABCA) to address contamination during site redevelopment. The public comment period closed on February 18, 2019 with no comments received.

Site Comment: The property owner cannot expose soil in specified areas without approval of DEQ, notification to workers of the potential presence of contamination, and management as hazardous or solid waste of any soil excavated for disposal. Excerpts of message from Tom Roick, DEQ, 2/19/13: <quot>[A] consultant contacted me by phone today. The property changed hands and the current owner apparently had little knowledge of the Easement and requirement to notify DEQ if soil was disturbed. They are sending soil samples to the lab from an area that has been excavated, and will contact us when the results come in. [This] could be an example where an IC (the Easement) by itself hasn t been enough to ensure long term controls are being maintained.<quot>

Comments: The property owner cannot expose soil in specified areas without approval of DEQ, notification to workers of the potential presence of contamination, and management as hazardous or solid waste of any soil excavated for disposal. Excerpts of message from Tom Roick, DEQ, 2/19/13: <quot>[A] consultant contacted me by phone today. The property changed hands and the current owner apparently had little knowledge of the Easement and requirement to notify DEQ if soil was disturbed. They are sending soil samples to the lab from an area that has been excavated, and will contact us when the results come in. [This] could be an example where an IC (the Easement) by itself hasn t been enough to ensure long term controls are being maintained.<quot>

FINDS:
Registry ID: 110070528673
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110070528673

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

BRIDGE HOUSING (Continued) **1000913239**

discharge does not adversely affect water quality.

Decode for NarcdID: Remedial Action
NARR Comments: [6/18/13 SAM/ICP] A Phase II evaluation of the property occured in March 2013. Three outdoor soil samples were collected near areas where rodenticide may have accumulated. Pesticides were below laboratory reporting limits for outdoor soil samples. Interior dust samples near former mixing and packaging areas were planned, but insufficient quantities of soil/dust were available on floors, overhead cabinets or exhaust fan. [7/24/13 SAM/ICP] An NFA determination is recommended for the Mammal Survey and Control Services site based on the following: Soils sampled on-site in 2013 did not find strychnine or warfarin concentrations above reporting limits and EPA Industrial soil screening values. A DEQ Inspection report during operation in 1984 indicated the site did not pose a threat to the public or environment. The site does not contain significant ecological habitat.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	500-999
Most Hazardous Ingridient:	PETROLEUM HYDROCARBONS
United Nations/north America 4 Digit Class Number:	0000
Hazard Rank:	2
EHS Ingredient:	Not reported
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Combustible Material
Second Hazardous Class Code For Chemical:	Chronic Health Hazard
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	4.5
Hazard Class 2 Of The Chemical:	6.4
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	Not reported
EPA Pesticide Registration Number:	Not reported
Contains 112R:	Not reported
Contains EHS:	Not reported
Fertilizer:	N
Pesticide:	N
Contains 313:	Not reported

Chemical Name:	OXYGEN
Physical Description:	GAS
Case Number:	7782447
Facility Id:	024423
Physical State Of The Substance:	3
Average Amount Possessed During The Year Code:	20
Maximum Amount Possessed During The Year Code:	20
Applicable Unit Of Measure Code:	3
Description Of The Unit Of Measure:	CUBIC FEET
Type Code:	L

CITY OF PORTLAND - KERBY GARAGE (Continued) **U000433420**

Description:	CYLINDER
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	2
Pressure Description:	GREATER THAN NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE
Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	365
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	1,000-4,999
Description Of The Avg Qnty Code:	1,000-4,999
Most Hazardous Ingridient:	OXYGEN
United Nations/north America 4 Digit Class Number:	1072
Hazard Rank:	2
EHS Ingredient:	NONE LISTED ON SDS
Substance Pure:	True
Substance Mix:	False
First Hazardous Class Code For Chemical:	Oxidizers
Second Hazardous Class Code For Chemical:	Non-flammable Gas
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	5.1
Hazard Class 2 Of The Chemical:	2.2
Hazard Class 3 Of The Chemical:	Not reported

Additional Chemical:

Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	N
Pesticide:	N
Contains 313:	N

Chemical Name:	ARGON/CARBON DIOXIDE
Physical Description:	GAS
Case Number:	7440371
Facility Id:	024423

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

PORTLAND CITY OF VEHICLE SVCS KERBY (Continued) **1004770245**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

PPG INDUSTRIES INC (Continued) **1000119990**

Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (6/10/97 GMW) Site added to database due to suspected contamination from past operations, and based on an 8/96 visual survey of NE Martin Lurther King, Jr. Blvd. (ECSI #1996). In addition, the site was added to ECSI because the Portland Development Commission is seeking assistance on the environmental aspects of possible property redevelopment. Information on the site from the MLK area survey is as folows: 9/10/96 2808 Elsie's Old Gold Soul/Photography by Duane Sign at corner of lot says <quot>Two-G's Family Plaza<quot>; bldg & property occupy a full block; former site of a dairy. There appears to be an unknown business operating out of huge asphalted parking area on E side of bldg, where many pallets and other wood items are stored. There's a large HO tank (prob. in use) on N side of bldg, in Stanton sidewalk; there's also evidence of 1 (?) abandoned fuel UST behind NE corner of bldg. In this same area are what appear to be about 20 unlabeled 5-gal waste containers and an unlabeled 55-gal drum.

Decode for NarcdID: Remedial Action
NARR Comments: (9/20/99 GMW/SAS) Site has been redeveloped without DEQ involvement. Although no contamination was ever documented, DEQ has no information on how PDC and the developer may have addressed potential environmental issues. (1/26/10 SAM/SA) Two Phase I Environmental Site Assessment (ESA) were completed for the site in 1995 and 2009. The Phase I ESA performed in June 2009 by EVREN Northwest, Inc determined the unknown business was a pallet manufacturer and the unlabeled 5-gallon and 55-gallon containers were used for painting. Individual containers of 5-gallon paint were mixed in the 55-gallon drum and used as house paint for other properties. The paint and containers were removed or recycled prior to the demolition of the dairy in 1997. Prior to paving/redevelopment, no evidence of release from this material was apparently observed. Between 1997-2000 the six historic USTs located on-site were decommissioned. Based on this work, DEQ s Northwest Region UST program determined in a August 9, 2000 letter that no further action was necessary for the following (file #26-98-0418): One 10,000 gallon gasoline UST One 6,000 gallon heating oil UST One 2,000 gallon heating oil UST Three 1,000 gallon gasoline USTs DEQ concludes that based on the information presented to date, the Standard Dairy site is currently protective of public health and the environment and requires no further action under the Oregon Environmental Cleanup Law.

NARR Comments: The site was initially occupied by residential housing in the early 1900 s and redeveloped in the mid 1930s as a dairy/creamery. Operation of the dairy continued through 1981 when it was closed. During operation of the dairy, a small portion of the NW corner was used for other businesses including a sheet metal shop and a dog and

STANDARD DAIRY (Continued) **S103842938**

cat hospital , in 1950. Also, a fleet of milk delivery trucks were apparently maintained and stored on-site. Several retail shops and warehouses (including a wood pallet manufacturer) occupied the property between 1981 and the late 1990s. The current owner bought the property in May 1996. Between 1997 and 2000 the dairy was renovated and remodeled as a multi-use (mixed commercial and residential) development.

warehouse and office space. There is a smaller building connected to the main structure on the southwest side. The site was in residential use from the 1900's to the 1930's when the residences were removed. In the late 1930's, the site was redeveloped into a service station that operated until the late 1940's. The site was then occupied by a used car dealership until the 1980's when the property became a warehouse and office building. From the early 1980's to 2008, AAA Heating and Cooling occupied the building. At the time of the Phase II ESA, the buildings were vacant.

Environmental Interest/Information System:

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

NARR Comments: (07/10/2012 KPD/ICP) Four borings were advanced at this site in January 2009 as part of a site assessment. Soil gas samples were collected from each boring at five feet below ground surface, followed by soil samples at 15 ft bgs. The soil samples were analyzed for petroleum hydrocarbons, and none were detected. The soil gas samples were analyzed for volatile organic compounds. Tetrachloroethylene (also known as perchloroethylene or PCE) was reportedly detected in all of the soil gas samples at concentrations ranging from 240 micrograms per cubic meter to 2,300 ug/m3.

NARR Comments: The highest detected concentration of PCE at the site exceeds DEQ's risk-based standards for residential exposures. However, <quot>single-family home<quot> residential redevelopment of the site is unlikely, so this contamination poses no risks to current or future urban residential or commercial uses.

NARR Comments: The site was residential as of the early 1900s. A service station was constructed at the site in the late-1930s and operated until the late-1940s. A used car dealership then occupied the site until the 1970s. The current office/warehouse on the north half of the site was built in the early 1980s and was occupied by AAA Heating and Cooling until September 2008. The site is currently the home of SCRAP, which collects and resells donated arts and crafts, school, and office supplies.

Name:	REED PROPERTY
Address:	N WILLIAMS AND N FARGO
City,State,Zip:	PORTLAND, OR 97227
Recipient Name:	Portland, City of (Oregon)
Grant Type:	Assessment
Property Number:	R308609, R308610
Parcel size:	0.26
Latitude:	45.5460674
Longitude:	-122.6666631
HCM Label:	Address Matching-House Number
Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	In 2012, development interest from a prospective purchaser prompted a Phase I ESA which revealed that this site was on the Oregon Department of Environmental Quality's (DEQ) ECSI list for suspected contamination due to past use as a dry cleaner and known underground heating oil tanks. As a result, the sale and redevelopment of the property were put on hold until further investigation was complete. The property owner approached the Brownfield Program for assistance with a Phase II ESA to determine if past use had resulted in contamination. The results of the Phase II investigation detected small concentrations of benzo(a)pyrene near the former placement of the underground heating oil tank. Although the contamination in the soil exceeded the urban residential RBC limits, DEQ determined that the release did not pose a human health threat under the proposed use of the site. In October 2012, the property owner enrolled in the Voluntary Cleanup Program and received a No Further Action Letter (NFA) from DEQ in late November of 2012. Now the sale and redevelopment of the property can move forward. The prospective purchasers are interested in developing a net zero mixed use development with solar power, recycled and local building materials, resident gardening space, bio-swales, and support infrastructure for rapid transit and bicycle use. The majority or entirety of the ground floor is anticipated as commercial and retail space, to promote sidewalk and neighborhood activity.

Created By: Not reported
Created Date: 12/17/2002
Updated By: ACOATES
Updated Date: 01/19/2017
Decode for NarcdID: Contamination
NARR Comments: Extensive petroleum and solvent contamination found in soil during the 1991 decommissioning of UST; 2800 tons of contaminated soil were removed to the St. Johns Landfill. A large volume of contaminated soil was left in place due to risk of damage to installed transfer piping that would have been undermined. The soil left in place, as well as other locations (floor and walls of excavations), were not adequately characterized for solvent contamination. Lab methods used were adequate only for screening of samples for solvents. (12/31/92 KPD/SAS) In April 1991, there was an oil spill on a nearby gravel lot that Priestly leased from ODOT to park and store empty oil trucks and tanks. Soil samples contained up to 51 ppm TPH. (AC June 2014) Chemicals of potential concern (COPCs) were determined to be primarily chlorinated hydrogenated VOCs. Petroleum hydrocarbons, fuel additives, and other non-chlorinated VOCs are also COPCs to a lesser extent. COPCs that were found to be chemicals of concern (COCs) in the risk assessment include: Soil: PCE, TCE, TPH-d, and benzo(a)pyrene. Soil Vapor: PCE; TCE; 1,2-dichloroethane; benzene; 1,2,4-trimethylbenzene; 1,4-dioxane; chloroform; and methylene chloride. Groundwater: PCE; TCE; cis-1,2-dichloroethene; 1,1-dichloroethane; benzene; chloroform; and methylene chloride.

NARR Comments: The Facility covers the majority of the block bounded by North Russell and North Page Streets and North Borthwick and North Albina Avenues. In addition to the offices, the Facility has three warehouses, a Clean Room, a maintenance shop, and three aboveground storage tank (AST) containment areas. The Facility includes eight parcels (tax lots). The total area of the Facility is 1.49 acres. The

TARR ACQUISITION, LLC (Continued) **1000222568**

surface coverage consists of the following: Buildings, 32 percent; Paved driveway or parking areas, 60 percent; Tank farms with secondary containment, 8 percent; and Vegetated areas, less than 1 percent.

NARR Comments: Over the history of the Facility, a variety of chemicals have been handled. In general, chemical groups handled at the Facility included fuels (gasoline, diesel, and kerosene), solvents (e.g., petroleum, alcohol, ketone, chlorinated, and acetate/glycol), and lubricating oils. The features/areas where chemical storage or handling has occurred at the Facility (current or historical) include ASTs, USTs, loading racks, a card-lock dispenser, drum/tote storage, piping manifolds, blending areas, a paint booth, and maintenance areas. The function and chemical handling for each area of the Facility is summarized as follows: Warehouse 1 Lubricant and chemical storage in 5- to 55-gallon containers; Warehouse 2 Chemical blending and packaging; drum reconditioning (non-chlorinated solvents only during the 1990s) and packaging; historically, blending sometimes occurred outside the southwest corner of the warehouse; Warehouse 3A Lubricant and chemical storage in 5- to 550-gallon containers; Warehouse 3B Packaging and storage of lubricants in 5- to 330-gallon containers; historically included chemical blending and packaging; Clean Room Storage of isopropyl alcohol in 5- to 330-gallon containers; historically included lubricant and chemical blending and packaging; Maintenance Shop Vehicle maintenance; parts cleaning; storage of several 20- to 55-gallon containers of lubricant, non-flammable solvent, and antifreeze; Former UST Farm Storage of motor fuels and solvents, but never chlorinated solvents or lubricants; Lubricant AST Farm Storage of lubricants only; prior use as vehicle parking; Horizontal ASTs on Parcel 1 Solvent storage; historically the only location used for bulk storage of chlorinated solvents; and Solvent AST Farm on Parcels 4 and 5 Storage of motor fuels and solvents, but never chlorinated solvents.

NARR Comments: (12/31/92 KPD/SAS) Site Assessment recommends a Preliminary Assessment (PA) to more completely characterize on-site contamination. (6/3/08 AC/VCP) Tarr joined DEQ's Voluntary Cleanup Program in 2002, and completed a Phase II investigation in December 2002. On-site and off-site soil vapors were identified in 2007. On-site systems were installed in site buildings in 2007. An off-site system of soil gas vapor probes was installed in 2008. (12/20/10

TARR ACQUISITION, LLC (Continued) **1000222568**

AC/VCP) An expanded groundwater monitoring network was installed in summer 2010. Soil vapor extraction system is in operaton. Investigation of the extent of the groundwater plume is in progress, as is delineating the extent of off-site soil vapors. (June 2014 AC) The initial RI Report was submitted on November 15, 2011. DEQ comment letters were issued on January 19, 2012 and August 15, 2013. The second DEQ comment letter was in response to the revised risk assessment tables and calculations. the Revised Remedial Investigation Report was submitted on February 11, 2014. The Feasibility Study was completed in March 2016. The Staff Report went out for public comment on December 1, 2016.

NARR Comments: Soil and groundwater contamination. The Willamette River is approximately 1,400 feet from site. Vapor intrusion has been identified as a key pathway of concern. A soill vapor extraction system was operated as an interim remedial action and successfully reduced concentrations to below risk-based concentrations.

NARR Comments: Property that comprises the Facility was originally developed for residential uses in the late 1800s. Residential use continued until the 1950s. Commercial/industrial development began on the northern portion of the Facility in the late 1950s. By the 1970s, the transition of the area to commercial/industrial use was essentially complete. Industrial and commercial uses predominate within the Site. Limited urban residential, entertainment, and dining uses are present in the immediate vicinity of the Facility.

TARR ACQUISITION, LLC (Continued) **1000222568**

Unit of Measure: Gallons
Release Date: 12/05/2007
Description: Driver was loading product into his tank truck from a product rack and lost 22 gallons N-Propyl alcohol, which spilled onto asphalt. The facility immediately threw down absorbents and a boom around a nearby storm drain sump. The recoverable product was recovered, some of it made it to the SD. The SD goes to an Oil Water Separator, which is being pumped out this afternoon. The OWS has a capacity of 820 gallons and was not full to the discharge pipe. No product made it to surface water.

NARR Comments: (10/29/12 CWH/CU) A Phase I Environmental Site Assessment, completed in November of 2011 concluded that there may be site contamination issues from a former underground oil storage tank and a former dry cleaning business that operated in one of several storefronts located on tax lot 11300 between about 1960-70.

NARR Comments: (10/29/12 CWH/CU) This is a flat, undeveloped lot in a dense urban setting in north Portland. Some remnant structure is present on tax lot 11400 - which appears to be a former foundation or retaining wall. The property is surrounded by dense urban residential and commercial/retail businesses.

NARR Comments: (11/28/12 CWH/CU) Future Urban Residential and Occupational exposure risk The B1-7 and B2-8 samples were collected at seven and eight feet below ground surface. DEQ does not consider contamination at this depth to pose a risk to future residents and site occupational workers unless the soil is brought to ground surface during redevelopment. The overall low concentration results for PAHs and lack of other field observations of contamination do not indicate a significant release occurred and it is unlikely that higher concentrations exist in other areas of the property. Since there were no VOC detections in any soils sampled on the site, there is no threat to future residents or site occupational workers from vapor inhalation from site releases. Current and Future Construction and Excavation Worker exposure risk None of the detected PAHs were above RBCs for these exposure pathways, therefore there is no risk to construction and excavation workers. The overall low concentration results for PAHs and lack of other field observations suggest that a significant release of contaminants has not occurred.

NARR Comments: (11/28/12 CWH/CU) Based on Sanborn insurance maps and City of Portland reverse directory records presented in the Phase I report, the site was initially developed in the early 1900s. Tax lot 11300 had a building that supported three storefronts. City directories

REED PROPERTY (Continued) **S112198890**

indicate that a dry cleaning business operated out of one of the stores during the 1960s and possibly into the early 1970s. Tax lot 11400 formerly housed a residence, which is no longer present. No information is available on dry cleaning operations in the storefront on tax lot 11300, including the type of solvent used or location of dry cleaning equipment. A Phase II site investigation was performed in April of 2012. Twelve push-probe borings were advanced at locations, with field screening of soil samples with a photoionization detector and soil collection for laboratory analysis. All of the borings explored down to 20 feet below ground surface. Borings were advanced and samples collected from locations adjacent to the former dry cleaning operation and underground storage tank. Samples were analyzed for petroleum hydrocarbons and volatile organic compounds. The April 2012 investigation found some evidence of releases near the estimated location of a former underground storage tank on the east side of tax lot 11300. The PID screening showed low levels of volatile compounds in some borings, with a maximum reading of 4.3 parts per million (ppm) in Boring B-11. No other field or laboratory indicators of contamination were observed.

NARR Comments: (7/19/95 JAK/SRS) The basement of the original building (90' X 100') is the main point of concern, as it was used as a storage area for a variety of chemicals and laboratory equipment. A fire in 1967 collapsed the concrete floor of the building and all the materials in the basement were buried under the debris. Most of the undamaged materials were reportedly salvaged. In 1969, the building was demolished, the debris bulldozed, and the area filled with soil and seeded with grass by a subsequent owner of the property. The property is currently a vacant lot. Nature and extent of contamination was evaluated during the site investigation 9/95 to 10/96.

NARR Comments: (7/3/97 JAK/SRP) DEQ's Site Response Program issued a Consent Order to Nurnberg Scientific Company and Deborah Parker, current property owner, on 11/2/94 requiring a site investigation and removal assessment. The investigation was conducted in two phases. The first phase was conducted July 1995 to October 1995 and included the installation of soil borings and a monitoring well, and collection/analysis of soil and groundwater samples. The second phase of the site investigation was conducted from February 1996 to February 1997 and included test pit explorations and the collection and analysis of soil samples. No buried chemicals were found in the sampling locations during the site investigation. The analytical results of the soil samples were compared to the Numerical Soil Cleanup Levels. With the exception of arsenic and beryllium, none of the soil samples contained hazardous substances that exceeded the Numerical Soil Cleanup Levels. Arsenic and beryllium in some of the soil samples exceeded the Numerical Soil Cleanup Levels. However, the concentrations of arsenic and beryllium in the soils at the site are consistent with background levels found in soils throughout the Portland area. Results of the soil sampling indicate that soils at the site were not impacted by hazardous chemicals that were possibly present in the former building at the time of the fire. Groundwater

NURNBERG SCIENTIFIC CO. (Continued) **S103841434**

was encountered at the site at 163 feet below ground surface. The analytical results of the groundwater samples were compared to the federal drinking water standards or maximum contaminant levels (MCLs). Perchloroethylene (PCE) was detected in groundwater at a concentration of 22 micrograms per liter (mg/L), which exceeded the MCL of 5 mg/L. However, groundwater at the site is not currently used as a drinking water source, so there is no present threat to human health. Due to the depth of groundwater and the absence of PCE in the soils at the site, the PCE in groundwater at the site is believed to originate from a source other than Nurnberg Scientific Company operations. Based upon the results of the site investigations, DEQ has determined that no further investigations or remedial actions are required at this site. No further action is required at this site under the Oregon Environmental Cleanup Law, ORS 465.200 et seq., unless additional information becomes available in the future that warrants further investigation and/or remedial action.

Decode for NarcdID: General Site Description
NARR Comments: Former Westinghouse facility currently owned by City of Portland Water Bureau. Prior to multiple cleanup actions, high levels of PCBs were detected associated with historical transformer work. Multiple investigation and cleanup activities under DEQ, including remediation of off-site contamination in City of Portland storm sewer system. As part of redevelopment, most contamination removed. Groundwater impacts modest. Site is currently capped by new buildings and related. Source control decision and conditional NFA issued by DEQ in 2019. Ongoing cap inspection and maintenance required.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Based on DEQ's request, the City of Portland has agreed to complete a source control evalution for the site to assess potential and future impacts to the Willamette River. This work will be completed in 2012. DEQ is also provide technical assistance/oversight for environmental investigation at the former Westinghouse site related to pending site redevelopment by the Water Bureau. In January 2012, DEQ reviewed and commented on a plan for additional soil sampling, and oversaw investigation and removal of a former transformer oil UST. A Removal/Remedial Action Plan for PCB cleanup was submitted to DEQ and EPA TSCA (Region 10) in April 2012. The plan discussed both removal of PCB soil hot spots, and subsequent capping of the site as part of site development. A revised RAP was subsequently approved by DEQ and EPA. In September 2012 DEQ received (and subsequently approved) a proposal by the City to complete source control work under the existing IGA and a submitted Scope of Work. The SOW outlined groundwater monitoring and additional action to complete a full source control evaluation for the Westinghouse site. The approach and SOW were approved by DEQ. A draft CMMP for site action was submitted

PORTLAND CITY OF WATER BUREAU (Continued) **1001233571**

to DEQ in November 2012. DEQ provided comments, and a revised CMMP addressing DEQ and EPA comments dated February 2013 approved by DEQ. Hot spot removal completed in March 2013. (December 2013) PCB soil remediation work has been completed as part of site development work, and source control investigation is in progress. Four monitoring wells were installed on-site in late 2013, and will be monitored through 2014. Groundwater sampling was completed in 2014, with contamination detected in both on-site and upgradient (background) wells. A source control evaluation report was submitted to DEQ in 2015. DEQ commented on the work plan, and requested installation and sampling of additional wells to define the extent of site-related groundwater contamination. A work plan (Addendum #1) was approved in February 2016 and implemented. A Remedial Action Closure and Source Control Evaluation Report was submitted in January 2018, following extensive site cleanup and redevelopment, and approved by DEQ. DEQ recommended a source control decision and conditional NFA in January 2019. A conditional NFA was issued by DEQ on October 11, 2019.

MASTER CHEMICAL INC. (Continued) **S103842264**

NARR Comments: (8/23/95 SXF/SAS) There is no indication that significant spills have ever occurred at the site, nor that any kind of persistent toxic substances have ever been used at the site. The only hazardous substances that have been used at Master Chemical are sodium hydroxide (caustic), sodium hypochlorite solution (bleach), and chlorine gas (which dissipates). Therefore, no further action is required at this site.

NARR Comments: In response to a complaint alleging improper disposal of waste solvents, it was determined that this source was an unregistered generator of hazardous waste. The DEQ inspector discovered that Williamson & Bleid was generally unaware of and not in compliance with applicable provisions of hazardous-waste management regulations. Wastes were present in unmarked and unlabeled 55-gal. drums, as well as in an undetermined number of 5-gal. pails.

NARR Comments: [Nov. 2014] The former Kenton Foundry is in North Portland, adjacent to the Former Westinghouse site (ECSI #4497). Under the City of Portland's ownership, the property has been redeveloped as part of the Portland Water Bureau's maintenance center. Metals, petroleum, and some PCBs detected on-site, which have largely been removed during mass excavation associated with redevelopment work. The city is completing work under an ICP with DEQ, and expects to pursue a NFA determination for the site. An ICP report has not yet been submitted to DEQ.

Point of Reference:	Entrance Point of a Facility or Station
Highlights:	The former Campbell Dry Cleaner operated from 1952 to 1995 when the current owner, Gary Hampton and his wife, purchased the building from Mr. Campbell, their long-time neighbor. With plans to use the space as rental income, the Hamptons renovated both the upstairs apartment and downstairs commercial space. With the recent passing of his wife, Gary made the decision to sell the property. Due diligence from a prospective purchaser prompted Phase I and Phase II environmental site assessments. Unknown to Mr. Hampton, the assessments revealed significant amounts of TCE and PCE (common contaminants from the dry cleaning process) in the soil beneath the building. Due to the extent and nature of the contaminants, the sale of the property was put on hold. Gary Hampton has been encouraged by DEQ to have additional site assessments conducted to clarify potential vapor intrusion issues on neighboring properties. Gary Hampton came to the Portland Brownfield Program seeking financial assistance to complete the environmental site assessments necessary to help determine cleanup needs. The first Phase II investigation revealed PCE/TCE contaminated soil below the former dry cleaning machines. Air quality testing also revealed vapor intrusion issues on the property. Additional Phase II testing helped delineate the extent of contaminated soil. The owner is currently working with DEQ to implement a cleanup plan which is being funded through DEQ's Orphan Sites program. Gary Hampton is no longer interested in selling the property. He plans on continuing to live in the upstairs apartment and has a business plan for a coffee shop in the downstairs commercial space. There is support from the neighboring businesses for a coffee shop and within a 0.10 walking radius, there are approximately 400 employees that could benefit from this service. Although the current environmental concerns are stalling any future plans for the downstairs space, Mr. Hampton continues to research funding opportunities and has made personal investments by completing small business classes at Portland Community College.

Years later and after several improvements to the space, the Hampton's decided to sell the property. Due diligence from a prospective purchaser prompted a Phase I and Phase II environmental site assessments. Unknown to Mr. Hampton, the assessments revealed significant amounts of TCE and PCE (common contaminants from the dry cleaning process) in the soil beneath the building. Due to the extent and nature of the contaminants, the sale of the property was put on hold.

Point of Reference:	Entrance Point of a Facility or Station
Highlights:	The former Campbell Dry Cleaner operated from 1952 to 1995 when the current owner, Gary Hampton and his wife, purchased the building from Mr. Campbell, their long-time neighbor. With plans to use the space as rental income, the Hamptons renovated both the upstairs apartment and downstairs commercial space. With the recent passing of his wife, Gary made the decision to sell the property. Due diligence from a prospective purchaser prompted Phase I and Phase II environmental site assessments. Unknown to Mr. Hampton, the assessments revealed significant amounts of TCE and PCE (common contaminants from the dry cleaning process) in the soil beneath the building. Due to the extent and nature of the contaminants, the sale of the property was put on hold. Gary Hampton has been encouraged by DEQ to have additional site assessments conducted to clarify potential vapor intrusion issues on neighboring properties. Gary Hampton came to the Portland Brownfield Program seeking financial assistance to complete the environmental site assessments necessary to help determine cleanup needs. The first Phase II investigation revealed PCE/TCE contaminated soil below the former dry cleaning machines. Air quality testing also revealed vapor intrusion issues on the property. Additional Phase II testing helped delineate the extent of contaminated soil. The owner is currently working with DEQ to implement a cleanup plan which is being funded through DEQ's Orphan Sites program. Gary Hampton is no longer

CAMPBELL DRY CLEANER (Continued) **1016447305**

interested in selling the property. He plans on continuing to live in the upstairs apartment and has a business plan for a coffee shop in the downstairs commercial space. There is support from the neighboring businesses for a coffee shop and within a 0.10 walking radius, there are approximately 400 employees that could benefit from this service. Although the current environmental concerns are stalling any future plans for the downstairs space, Mr. Hampton continues to research funding opportunities and has made personal investments by completing small business classes at Portland Community College.

Environmental Interest/Information System:

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CAMPBELL DRY CLEANER (FORMER) - PORTLAND (Continued) **S111429247**

The Campbell Dry Cleaner site operated from 1952 to 1996. Previous investigations involving soil and soil vapor sampling have found concentrations of PCE and TCE in soil and soil vapor that exceed applicable risk-based concentrations. Additional site investigations to determine appropriate cleanup alternatives have been conducted using the City of Portland's Brownfield Program funds in conjunction with State of Oregon Orphan funds. Evaluaiton of cleanup alternatives will be performed using State of Oregon Orphan funds.

NARR Comments: [KRT 3/2016] Site investigations conducted between 2008 and 2014 identified tetrachloroethene (PCE) and trichloroethene (TCE) in soil, groundwater, soil vapor, and indoor ambient air. Analytical data from the site were compared to DEQ s human health risk-based concentrations (RBC) for potentially complete exposure pathways to site receptors (DEQ 2012). Risk screening identified concentrations of PCE in indoor air exceeding DEQ s inhalation RBC for urban residential and occupational receptors. PCE in soil and soil gas also exceeded the RBC for urban residential receptors via the vapor intrusion pathway. [SA/SAM 3/5/12] Vapor instrusion into buildings from subsurface contamination is the primary pathway of concern.

NARR Comments: (KRT 12/16) Easement and Equitable Servitudes document has not been recorded on propeorty deed by Multnomah County. The NFA determination from DEQ cannot be given without this action. (KRT 9/16) Working with property owner to craft acceptable Easement and Equitable Servitudes document. Latest draft E&ES provided to property owner on 7/15/2016 for review. Receipt of E&ES being attached to deed is required for DEQ to issuance NFA letter. (KRT 3/16) Oregon DEQ recommends a partial, conditional No Further Action (NFA) determination for the Former Campbell Dry Cleaner building, in Portland which was sent out for a 30-day public comment period in March 2016. The multiple cleanup tasks performed in response to site characterization and risk evaluation constitute a protective final remedy and are the basis for a partial conditional NFA proposal. The multiple cleanup tasks, especially the building crawlspace mechanical ventilation system, have been demonstrated to effectively mitigate vapor intrusion into the building from contaminated site soils. To ensure continued operation of the building crawlspace mechanical ventilation system, an Easement and Equitable Servitudes deed restriction has been prepared for submittal to Multnomah County. This No Further Action proposal is partial because if pertains only to the subject property, not the adjacent affected properties. It is conditional because protectiveness to building occupants requires continuous use of the building crawlspace mechanical ventilation system. The Campbell Dry Cleaner site operated from 1952 to 1996. Previous investigations involving soil and soil vapor sampling have found concentrations of PCE and TCE in soil and soil vapor above urban residential, occupational, construction and excavation exposure scenarios. The highest concentrations of soil impact have been found at the southwest corner of the building, which is the area where the dry cleaning washer was located. The primary purpose of investigation and cleanup work in 2015 was to produce safe indoor air environment for occupants of 817 & 819 North Russell Street (upstairs/downstairs addresses). With this focus, off-site data are limited and were collected to support investigation of the subject property. Additional site investigations to determine appropriate cleanup alternatives were conducted. Orphan funds were applied to complete cleanup work.

NARR Comments: Former auto repair facility operated on the southwest portion of the property. Also, 2 greenhouse buildings occupied the south-southeast portion of the property. 2 12,000-gallon USTs (gas and diesel) were decommissioned by removal prior to this becoming a cleanup site. No known release from the UST removal activities. As part of this cleanup, the former pump island area was investigated. From Phase II ESA, contaminants are mainly TPH.

NARR Comments: Elevated levels of PCE in soil and soil gas. PCE concentrations in soil were found up to 341 mg/kg. PCE concentrations in soil gas were found up to 1,700,000 ug/m3. No groundwater was encountered during any of the previous site investigations. Elevated PCE levels found in indoor air of adjacent properties. DEQ installed indoor air purifiers for interim remedial action in 2012. Cleanup involving chemical oxidation and soil vapor extraction to begin July, 2013.

NARR Comments: Previous use of the property included: residential from 1909 to 1924, office space and commercial use from 1924-1930, saw filer and lawn mower repair service from 1940-1950, and Ellis Dry Cleaners from 1950-1986. This site is currently vacant with the concrete slab from the now demolished building present in the center of the property. The previous owner and operator of Ellis Dry Cleaners indicated that approximately 0.5 gallons of PCE was dumped every week at the

ELLIS DRY CLEANERS FORMER (Continued) **S111119965**

property from 1950-1986. Numerous site investigations document a release of PCE to soil and soil gas.

NARR Comments: On March 15, 2013, 3300 N. Williams Ave. LLC entered into a Prospective Purchaser Agreement with DEQ that requires the following remedial action to be performed on the property: Complete remedial action to achieve the following: a) Treatment of hot spots of PCE and its daughter products including: trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride in soil and soil vapor to below hot spot levels. b)Remediation of soil and soil vapor to below applicable risk based concentrations for PCE and its daughter products on and below the Property. c) Reduction of soil vapor concentrations at the Property boundary to below residential soil vapor RBCs, and/or mitigate off site vapor migration through the installation of a vapor collection system that is shown to induce a vacuum in vadose zone soil at the site Property boundary. d) Carbon filtration will be required for concentrations of PCE, as measured from the pre-filtered effluent of the soil vapor extraction system, exceeding 4,469 ug/m3. Each carbon filter will consist of one, 55- gallon drum filled with 200 pounds of granular activated carbon. 3300 N. Williams Ave., LLC will hire a qualified sub-contractor to remove and properly dispose of the filters. II.Monitoring a) 3300 N. Williams Ave., LLC will conduct monitoring of the remediation system/remedial action to determine if

ELLIS DRY CLEANERS FORMER (Continued) **S111119965**

adjustments are necessary to optimize the reduction of PCE and its daughter products in soil and soil vapor. b) 3300 N. Williams Ave., LLC will conduct compliance monitoring following implementation of the remedial action to demonstrate that the remedial action is protective of human health and the environment. III.Deliverables a)3300 N. Williams Ave., LLC will submit a Remedial Action Work Plan. b) 3300 N. Williams Ave., LLC will submit a Construction Completion Report. c) 3300 N. Williams Ave., LLC will submit progress reports as set forth in Section 7.H of the Consent Order PPA. d) 3300 N. Williams Ave., LLC will submit a Compliance Monitoring Work Plan. e) 3300 N. Williams Ave., LLC will submit a Compliance Monitoring Report. IV.Recording of an Easement and Equitable Servitude a) DEQ reserves the right to implement institutional and/or engineering controls on the property to achieve protective conditions for current and future use. b) If DEQ determines that institutional and/or engineering controls are required due to the results of remedial action monitoring and compliance sampling of soil vapor exceeding applicable RBCs, 3300 N. Williams Ave., LLC shall implement institutional and/or engineering controls within 30 days of DEQ approval of a construction completion report. On April 8, 2013, 3300 N. Williams Ave LLC purchased the property and entered into a loan agreement with the City of Portland Brownfield Program's Revolving Loan Fund (RLF). Terms of the RLF require a public comment period for an Analysis of Brownfield Cleanup Alternatives and the development and implementaiton of a Community Relations Plan (CRP). The site cleanup will include injection of a chemical oxidation solution into the subsurface and operation of a soil vapor extraction (SVE) system. The SVE system will be filtered prior to being discharged at the site. The SVE filter was designed to be protective to human health and not increase the level of PCE in ambient air. Site Cleanup began in July, 2013 and will likely run for at least one year.

NARR Comments: [April 2014] DEQ is overseeing the cleanup of the former dry cleaner site, which began in July 2013. Cleanup activities on-site include chemical oxidation injection and installation and operation of a soil vapor extraction system. The cleanup is expected to take place for at least one year.

 Monitoring/treatment of adjacent properties affected by soil vapor contamination associated with Ellis Dry Cleaners is ongoing and will be conducted throughout the cleanup process. (July, 2018 RWA) The SVE system was turned off on July 2, 2018. Site remediation confirmation sampling will occur in early August to determine if contaminant levels are below applicable risk-based concentrations. If concentrations are below RBCs in August, the SVE system will remain off and another round of sampling will occur in December, 2018.

Highlights:	A Remedial Investigation Report was prepared in May 2007, and a Limited Historical and Environmental Records Review in July 2007. 12/5/2013 update Ellis Dry Cleaners operated on this site from 1950 to 1986. During that time the owner improperly disposed of the dry cleaning solvent tetrachloroethene (PCE or Perc) which we now know to be a cancer causing contaminant. When the current owners purchased this property in the late 1980s to start a small business they were unaware of the potential environmental concerns associated with dry cleaners. Performing site assessments was not yet a common practice for small commercial properties. When the business venture fell through site assessments were sought during the attempted sale of the property. Initial assessments revealed high levels of PCE far above acceptable human health levels for commercial properties. These findings prompted further testing. In 2006 the Portland Brownfield Program became involved to clarify the extent of contamination and

HALL - FORMER ELLIS DRYCLEANER (Continued) **1017782411**

possible mitigation needs. Further testing confirmed high levels of PCE as well as the potential for soil vapor to impact neighboring properties. Due to the extent of the contamination and potential cost of cleanup the site remained vacant and unsold. Today a prospective purchaser is working with the Oregon Department of Environmental Quality to develop and implement a cleanup plan on this property. The cleanup plan funded by a low-interest loan from the Portland Brownfield Program will include soil treatment and the installation of a vacuum system to remove vapors and mitigate impacts on neighboring properties so that the site can be redeveloped and brought back into active reuse.

Property Description:	This property operated as Ellis Dry Cleaners from the early 1950s until 1986, during which time approximately 900 gallons of drycleaning chemicals, PERC, were disposed of on the property. When the property was purchased for a new small business space, the owner was unaware of the environmental issues associated with dry cleaners and site assessments were not required at the time of purchase.

Point of Reference:	Entrance Point of a Facility or Station
Highlights:	A Remedial Investigation Report was prepared in May 2007, and a Limited Historical and Environmental Records Review in July 2007. 12/5/2013 update Ellis Dry Cleaners operated on this site from 1950 to 1986. During that time the owner improperly disposed of the dry cleaning solvent tetrachloroethene (PCE or Perc) which we now know to be a cancer causing contaminant. When the current owners purchased this property in the late 1980s to start a small business they were unaware of the potential environmental concerns associated with dry cleaners. Performing site assessments was not yet a common practice for small commercial properties. When the business venture fell through site assessments were sought during the attempted sale of the property. Initial assessments revealed high levels of PCE far above acceptable human health levels for commercial properties. These findings prompted further testing. In 2006 the Portland Brownfield Program became involved to clarify the extent of contamination and possible mitigation needs. Further testing confirmed high levels of PCE as well as the potential for soil vapor to impact neighboring properties. Due to the extent of the contamination and potential cost of cleanup the site remained vacant and unsold. Today a prospective

HALL - FORMER ELLIS DRYCLEANER (Continued) **1017782411**

	purchaser is working with the Oregon Department of Environmental Quality to develop and implement a cleanup plan on this property. The cleanup plan funded by a low-interest loan from the Portland Brownfield Program will include soil treatment and the installation of a vacuum system to remove vapors and mitigate impacts on neighboring properties so that the site can be redeveloped and brought back into active reuse.

NARR Comments:	(JKS, 4/15/14) In October 2013, Maul, Foster & Alongi (MFA) performed a focused Phase II ESA at the site to investigate areas of potential environmental concern. Eighteen borings were advanced in various areas of the site. Petroleum hydocarbons and/or PCBs were encountered at concentrations exceeding Risk-Based Concentrations in borings advanced near suspect USTs, disturbed soil, oil/water separator, and sump in the secondary garage. Metals including arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver were detected in selected soil samples. Arsenic detections exceeded applicable RBCs but did not exceed background levels in the Portland area. Polynuclear aromatic hydrocarbons were also detected in the soil samples.

NARR Comments: city of Portland plumbing records indicate at least one sump is present on site since 1927. Wastes may have been disposed of in the sump. If present, underground storage tanks may have leaked to subsurface. Vapor intrusion and direct contact to soils may be a potential pathway. In work completed between October 2013 and January 2014, soil contamination was removed from all areas at the site except for the eastern portion of the UST excavation. Therefore, risks from the Soil Ingestion, Direct Contact and Inhalation are not unacceptable. March 2014 soil-gas testing showed that vapor intrusion risks to likely future residents are not unacceptable (JKS 4-15-14).

NARR Comments: A site screen is recommended for the site. (JKS 4/15/14) Between October 2013 and January 2014, MFA excavated contaminated soil from the above-listed areas, as well as from a possible drywell, a former hoist in the Main Bay, piping assoicated with the former dispensers and other features and USTs in the right-of-way east of the site. With one exception, contaminated soil was removed from each of these areas until confirmation samples did not contain detectable levels of petroleum hydrocarbons or appropriate constituents. A soil sample collected from boring G27 at 10.5 feet bgs contained gasoline-range TPH at a concentration (6,810 mg/kg) above RBCs for the vapor intrusion pathway under likely future use scenarios. Based on data for nearby delineation borings, the volume of contaminated soil represented by this sample is low and it is limited in extent. However, a gas utility in the eastern portion of the UST excavation prevented removal of this soil. Soil-gas samples were collected from the portion of the property nearest to this sample but were not found to contain contain gasoline-range TPH or associated VOCs at concentrations above residential RBCs.

NARR Comments: Former auto service cener built in 1927. Information suggests the property has been vacant and unused since at least the mid-1980s. It has been the site of illegal dumping, abandoned vehicles, etc., with numerous complaints to the City of Portland.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [May 2014] A 2013 site investigation performed at the request of the site owner indicated the likely presence of contamination from past site operations. Between Oct. 2013 and Jan. 2014, petroleum-contaminated soil was excavated and removed from the site, and all USTs decommissioned in place.

 The property owner submitted the consultant’s final cleanup report to DEQ in March 2014. DEQ’s review confirmed that the recent remedial actions had removed threats to human health and the environment; DEQ therefore made a no-further-action determination for the site in April 2014. See the documents posted below for more details. In November 2015, during excavation related to construction of a residential apartment building, soil contamination was discovered near the northwest corner of the excavation. Accessible contamination was removed but residual

NE 7TH AND RUSSELL SERVICE STATION (FORMER) (Continued) **S113703057**

impacts were noted in the west and north sidewalls near the northwest corner. Because soil was removed to a uniform depth right up to the property boundary, it was necessary to shore using steel piles and timber lagging. Due to proximity to nearby residences, DEQ required assessment to determine the magnitude and extent of contamination. On November 25, 2015, PSI cut access holes in the timber lagging and advanced horizontal hand auger borings. Samples collected six inches beyondthe sidewall contained gasoline up to 2,300 ppm, diesel up to 21,800 heavy oil up to 54,000 ppm. Follow up analyses revealed VOCs at levels below urban residential RBCs for vapor intrusion and low levels of PAHs. However, samples collected at distances 5 to 8 feet beyond the sidewall were ND for all petroleum hydrocarbons, indicating the pockets attenuate rapidly with distane. Contamination is at depths (approximately 9 feet) unlikely to be encountered by area residents. Based on low VOC content and thickness of clean cover, contamination is not considered likely to pose VI risks. DEQ prepared a comfort letter indicating that DEQ would not require further assessment or cleanup (JKS 3-21-16).

NARR Comments: Phase 1 Environmental Site Assessment prepared by K&S Environmental, Inc., dated December 19, 2017 Soil samples collected from 9 direct-push borings advanced at the project site indicated that fill material present beneath the project site is impacted with metals and PAHs. Leachable lead was detected in one of the soil samples at a concentration greater than the EPA hazardous waste regulatory level, but less than applicable DEQ RBCs. Arsenic was detected at concentrations greater than DEQ Soil Ingestion, Dermal Contact, and Inhalation RBC for an occupational receptor. Groundwater samples indicated that petroleum hydrocarbons were detected at concetrations less than applicable DEQ RBCs.

NARR Comments: The property proposed for acquisition by Defendant, currently owned by Wayne B. and Rebecca A Van Raden (the Van Radens), is an approximately 1.78 acre site located at 2100 N. Albina Street, Multnomah County, Oregon. (3) According to reports on the Property, the site has been developed since the late 1800s. Until the 1920s, uses of the Property included residential and storefront commercial. Between the 1930s and 1970s, a variety of commercial operations were conducted on the Property, including various machine shop and fabrication operators, lumber companies and concrete companies. Between the late 1970s and 1984, the Property was vacant, at which time it was purchased by the Van Radens. Since being acquired by the Van Radens, the Property has primarily been used as a welding and fabrication shop specializing in heavy haul trailer suspension repairs. The Property was divided by an overpass built by the City of

BSS ALBINA (Continued) **S122879590**

Portland in the early 2000s. Presently, a large (divided) warehouse, a single story office/administrative building, a storage shed and parking are the main features on the Property. Currently, the property owner is seeking a PPA agreement to redevelop the property.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110004796962

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Grant Type: Cleanup
Property Number: -
Parcel size: 0.37
Latitude: 45.5476791
Longitude: -122.6611456
HCM Label: -
Map Scale: -
Point of Reference: -
Highlights: All hazardous materials were removed from the Grant Warehouse property prior to demolition of the former structure in order to provide a clean property for residential/mixed-use redevelopment. Through a significant collaboration effort between EPA, the Oregon Department of Environmental Quality, the City of Portland Brownfield Program, and the formerly Portland Development Commission (now Prosper), pooled resources to complete cleanup at the site and secured a no further action finding from the DEQ in July 2006. The property has met the community goals of removing harmful contaminants from the neighborhood and will provide an opportunity for community-based redevelopment in the form of much needed housing. Affordable housing is slated to be constructed on the site in 2018.

Past Use: Multistory	-
Property Description:	This corner warehouse was used as a metallurgical laboratory for over 20 years. In October 1998, Portland Police responding to a dispute at the address and called emergency responders when they found large quantities of chemical waste in the building. Chemicals were stored in containers ranging from small vials to industrial-sized vats. Some 55-gallon drums were stacked four high. The chemical wastes included corrosives, oxidizers, poisons, flammables and potentially explosive compounds. Prosper complied with all work plan, schedule, and terms and conditions requirements. All grant funds, and an additional $161,404 in funding provided by Portland Brownfield Program, were expended in completing cleanup. A no further action finding from the DEQ was secured in July 2006.

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory

GRANT WAREHOUSE (Continued) **1009311599**

agency whose job is to protect the quality of Oregon's Environment.
DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.
US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

NARR Comments: [August 2007] In April 2005, 15 soil borings were completed during a site investigation. Soil samples were not contaminated, except one that indicated a low level of heavy-oil range petroleum hydrocarbons (at 1,260 mg/kg). In August 2005, four additional soil borings were advanced near the former battery manufacturing facility. No contaminants were detected. In August 2006 during site demolition, contamination was observed by visual evidence (discolored soils). Analytical results indicated elevated levels of lead and petroleum hydrocarbons. 152 tons of soil were removed and disposed of as hazardous waste at the Arlington Landfill, while another 107 tons were removed and disposed of as solid waste at Hillsboro Landfill. Analytical results after soil removal indicated total lead in soils had been reduced below residential risk-based criteria and within regional background range, and that petroleum hydrocarbon levels had been reduced below detection limits. Also in August 2006, additional sampling in the area with the 1,260 mg/kg heavy oil sample evidence showed no evidence of contamination.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [January 2017] Former ECSI sites #2385 (Grant Warehouse) and 4711 (McCann/Lenske) exist with the new property boundaries of this site. The site is also within the study area of ECSI 5788 (Grant Warehouse Areawide). During investigation of the site, historical issues that remained were an area of elevated lead in soil (eastern side) and trichloroethylene in soil gas (southwest quarter). MLK & Cook Apartments Limited Partnership is seeking a Prospective Purchaser Agreement to redevelop the site.

NARR Comments: [2/25/13 SAM/ SA] Insufficient sampling was conducted at residential and commercial properties in close proximity to the site, and therefore, the extent of soil with lead concentrations greater than DEQ RBCs for residential receptors at these properties is unknown. DEQ has defined the area of potential concern as properties within a 100 yard radius from the former Grant Warehouse property based on our review of previous off site sample results in 1999. DEQ plans to perform a Preliminary Assessment (PA) with limited sampling at nearby and adjacent properties in close proximity to the former Grant Warehouse site. [6/19/13 SAM/SA] The PA found Lead concentrations were above residential risk based concentrations at the residential property, just east of the former Grant Warehouse facility. Other sources of lead from leaded gasoline (high volumes of cars and large trucks), nearby historic industrial facilities in the general vicinity, and lead based paint may also have contributed to the moderate lead concentration in soil on this property. Other properties sampled for lead were below risk based concentrations, except in areas where lead based paint may be expected, near drip lines and in close proximity to the home footprint. DEQ plans to contact the property owner of 436 NE Ivy Street to discuss the results of the assessment and make recommendations to either remove soil or create a physical barrier to prevent direct contact with soil in locations greater than 400 mg/kg on the property. DEQ will also send a letter to the owners of all properties monitored for this PA to inform them of the results and provide information regarding best management practices to minimize exposure to lead on their property, particularly in older homes with lead-based paint.

NARR Comments: The former Grant Warehouse site (ECSI#2385) covers approximately 0.37 acres of property and is located in an area of mixed residential and commercial use. The property was allegedly used as a metallurgical lab and metals recycling facility for approximately 20 years, from 1970 to 1999. The site is currently a vacant lot (Tax Lot 1700). EPA conducted an emergency removal of chemicals and debris from the site in 1998 and 1999. As part of the removal action, EPA collected soil samples at the site and from nearby residential and small commercial properties. Analysis of off-site samples confirmed concentrations of lead in soil above EPA PRGs DEQ risk-based concentrations of 400 mg/kg for direct exposure to residents. Additional investigation and remedial action was conducted at former Grant Warehouse in 2003, and remedial action to include the removal of underground storage tanks, hazardous waste-contaminated soil, asbestos, and the demolition of site buildings was completed in 2006. DEQ issued a No Further Action determination for the site on July 13, 2006; the No Further Action did not cover the offsite soils.

NARR Comments: [June 2016] In 2006, DEQ made a no further action decision at the former Grant Warehouse site (ECSI #2385). However, this NFA does not apply to properties adjacent to the former Grant Warehouse, which comprise this site (ECSI #5788).

 In March 2016, a potential buyer of the former Grant Warehouse and some surrounding properties applied to DEQ for a Prospective Purchaser Agreement. Work for the new conglomerate site was performed under ECSI # 6146.

Narrative:

NARR ID: 5738482
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: RWILLIA
Updated Date: 09/29/2004
Decode for NarcdID: Contamination
NARR Comments: In October 1998, Portland police responded to a dispute at the site and discovered numerous chemical and waste containers, as well as debris, stacked wall-to-wall in the building and in the outside yard. Portland Fire Bureau and DEQ inspectors later documented thousands of chemicals of all sorts, including corrosives, oxidizers, flammable/explosives, and dusts containing very high levels of lead. A number of homeless persons had been occupying the premises. Based on these findings, DEQ requested EPA assistance to abate the imminent and substantial endangerment the site presented, and EPA's Criminal Investigation Division initiated a criminal inquiry based on the apparently illegal storage of chemicals. (3/16/04 RKW/SRS) In October 2003, a Phase II Environmental Site Investigation was completed. Soil and concrete samples were collected from 23 locations in the buildings and yard. Remaining environmental concerns included three historic USTs, a pump island, catch basins, a suspect hoist and mechanic's pits, concrete flooring, and yard soils. Samples were analyzed for TPH, PAHs, PCBs, metals, and VOCs. The solvents PCE (14 mg/kg) and 1,1,1-TCA (0.026 mg/kg) were found in shallow soil in one area below the outside pavement where the asphalt appeared degraded. Solvents were not found in the next deeper soil sample. A low concentration of the petroleum-related VOC, 1,3,5-trimethylbenzene, was found near one end of a heating oil UST. TPH, PAHs, and PCBs were not found. Metals detected were generally within the range of natural background concentrations.

Updated Date: 03/16/2004
Decode for NarcdID: Hazardous Substance/Waste Types
NARR Comments: Building materials were surveyed in a Hazardous Building Materials Survey. Various building materials contained asbestos and lead. Dust inside the buildings contained heavy metals, particularly lead. Ash and debris in the foundry firebox contained high concentrations of heavy metals and is considered a hazardous waste.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The closest residence is less than 100 feet from the warehouse, on NE Ivy St., which borders the building's north side. A day care facility is also nearby, on NE Ivy, on the east side of the warehouse. Across NE Martin Luther King, Jr. Blvd. to the west are a combination of commercial establishments and residences. Off-site sampling conducted by EPA suggests that historical operations at the Grant Warehouse have not affected the surrounding community.

Updated By: GWISTAR
Updated Date: 07/20/2006
Decode for NarcdID: Remedial Action
NARR Comments: (7/2/99 GMW/SAS) From 11/98 to 2/99, EPA and its contractors conducted a $1 million removal operation at this site. This action had to be conducted in sequential steps, consisting of moving debris to make room for <quot>hazard categorization<quot> of the approximately 10,000 chemical containers at the site (both indoors and outdoors), disposing of chemicals and solid wastes at appropriate facilities, cleaning up spills as they occurred, and collecting and removing lead-contaminated dusts from rafters, walls, and floors. This removal action also consisted of sealing interior chimneys with concrete plugs, to prevent possible direct contact with metals-contaminated interior portions of the chimneys. EPA then sampled soil from various depths in unsurfaced parts of the yard, initially finding high levels of metals, PAHs, and other compounds. Finally, EPA removed and disposed of 12-18 inches of soil from the entire unsurfaced part of the yard, and replaced it with imported clean fill. No confirmation samples were collected following soil removal. EPA's removal action eliminated immediate threats, but did not necessarily result in the site's cleanup to standards that are protective of human health and the environment in the long-term. As a result, further environmental evaluation of this site is needed, with the scope dependent on projected future land uses. In June 1999, the U.S. Army Corps of Engineers began a Level I/II Environmental Site Assessment in conjuction with the City of Portland's Brownfield Showcase program. (2/1/05 RKW SRS) Workers have begun cleanup of hazardous building materials within Grant Warehouse structure. This includes asbestos roofing material, lead paint, and chimney structures. USTs and piping were removed with little sign of

GRANT WAREHOUSE REMOVAL (Continued) **1001404277**

contamination. (2/24/05 RKW SRS) Both brick chimneys have been completely removed. The outdoor ambient air sampling was ND showing that the negative air containment place on the roof was effective and the interior enclosure also passed air sampling. (5/16/05 RKW SRS) The warehouse building has been demolished. A small spill area of yellow soil was found below the building. Contaminated soil has been excavated. (1/18/06 RKW SRS) In January additional confirmation samples were collected in the yellow-stained soil area beneath the former building. (7/20/06 M. Greenburg/VCP) All known areas of soil contamination have been remediated to either non-detect levels or residential risk-based concentrations, and no further action is required for the site. This NFA does not apply to off-site properties where elevated lead concentrations were observed. The source of this off-site contamination has not been determined.

NARR Comments: [July 2006] All known areas of soil contamination have been remediated to either non-detect levels or residential risk-based concentrations, and DEQ is requiring no further action at the site. This NFA does not apply to ECSI #5788 (off-site properties with elevated lead concentrations, the source of which has not been determined). Site was later part of a conglomerate of parcels that were redeveloped under ECSI # 6146.

NARR Comments: In 2002, Portland Department of Transportation (PDOT) completed construction of the on-ramp and the results of the follow-up site investigation conducted in 2003 indicated that soils were impacted sporadically with petroleum hydrocarbons (including low concentrations of petroleum constituents; polynuclear aromatic hydrocarbons or PAHs) and PCBs. Site groundwater was not significantly impacted from on-site sources. After completion of the vehicle on-ramp, the site was completely covered by either elements of the ramp or by newly placed asphalt pavement and curbing. On July 22, 2004, the City of Portland recorded an easement and equitable servitude (EES) with the property deed, which documented the site

TUCKER BUILDING (Continued) **1006858623**

conditions and required maintenance of the on-ramp as an effective barrier to site contamination.

Decode for NarcdID: Remedial Action
NARR Comments: (8/5/04 ACV/VCP) Approximately 650 tons of petroleum-impacted soil were removed from the on-ramp footing excavations and disposed of at Hillsboro Landfill. PCB-contaminated concrete, where PCB concentrations exceeded a federal PCB cleanup level of 25 parts per million (ppm), from building floors was removed and disposed of off-site. The remaining building materials and concrete (with PCB concentrations below 25 ppm) were crushed and placed in the building basement before being covered by fill soil. The new on-ramp covered the site and if left in-place adequately mitigates future potential direct contact risks. The site remedy was submitted for public comment in April 2004 with no comments received. A deed restriction (Easement and Equitable Servitude) was placed on the property in July 2004. A conditional no further action decision was provided to the City of Portland in August 2004. (10/28/05 JMW/SAP) Comment period for Confirmed Release List (CRL) and Inventory listing closed on October 17, 2005. No comments were received, and the site has been listed.

NARR Comments: The current on-ramp structure and new paved parking areas have effectively eliminated site risks, and will continue to prevent human exposure as long as the on-ramp and paving remain in-place and are maintained. There were no unacceptable ecological risks found at the site.

NARR Comments: Prior to the on-ramp redevelopment in 2001/2002, the Tucker Property covered an entire city block and included a two-story building (with basement) on half of the property and asphalt-paved parking on the other half. Significant historic uses of the property had been an electrical equipment service center (PacifiCorp); and small retail and business offices since about the 1920/s. PacifiCorp used the facility to service and maintain electrical transformers and other electrical equipment.

NARR Comments: December 2012. As noted elsewhere in this ECSI report, a conditional NFA was issued for the site in 2004, which is contingent on the site cap remaining in place. The restriction is necessary because the site soil contains elevated contaminants including PCBs. As property formerly owner/operated by PacifiCorp, the Tucker property was included in a source control-related preliminary assessment completed in 2009 (<quot>Preliminary Assessment Report for the Albina Area Properties<quot>; Bridgewater Group, Inc., March 2009). the PA was subsequently revised. A source control investigation and activities report was completed for the site by the City of Portland 2010 (<quot>Former Tucker Building Storm System Investigation and Source Control Activities Report<quot>; City of Portland BES, April 2010). DEQ is currently evaluating a number of Albina area properties, including the former Tucker site, from a source control perspective. A source control decision is expected in 1st Quarter 2013. Cap inspection completed 1/4/13 by City of Portland at DEQ request.

NARR Comments: (11/27/13 DH) Attention to the RM11E area is based on the detection of elevated PCBs and other contaminants in river sediment; an Area of Potential Concern and Sediment Management Area have been identified for sediment in the area as part of Portland Harbor work. (01/12/2018) A RM11E Sediment Decision Unit is identified in the January 2017 Record of Decision issued by EPA. The primary COCs for the area, as indicated in Figure 29 of the ROD, are total PCBs and dioxin (PeCDD).

RIVER MILE 11E STUDY AREA - PORTLAND HARBOR (Continued) **S115330269**

Created Date: 11/27/2013
Updated By: DHAFLEY
Updated Date: 01/12/2018
Decode for NarcdID: Remedial Action
NARR Comments: (11/27/13 DJH) Investigation of in-water contamination and potential contribution from upland sources is being completed along the east bank of the Willamette River between approximately River Mile (RM) 10.9 and 11.6 for EPA by the so-called RM11E Group under a 2013 Settlement Agreement. An RI/FS work plan has been approved by EPA to better characterize the extent of contamination in the study area and prepare for early implementation under the Portland Harbor ROD. Proposed work includes collection and analysis of sediment and pore-water samples, riverbank sampling, and installation and monitoring of riverbank wells to assess potential impacts from upland sources. Work began in fall 2013 and will continued through 2014. EPA, DEQ and other parties are reviewing/overseeing site work. Work has been completed although a recontamination assessment is still outstanding. Multiple phases of work has been completed by RM11E Group participants, focusing on riverbank and in-water areas. Initial sampling results are presented in a Supplemental RI/FS Field Sampling and Data Report dated july 2014.

NARR Comments: Work is ongoing at the Portland Harbor/Willamette River River Mile 11 East (RM11E) area, under the direction of EPA Region 10, to support remedy selection and implementation in the area. Remedial action will be based on the january 2017 ROD issued for Portland Harbor by EPA. The RM11E area is an important area within the Harbor, being located at the most upstream end of the study area and containing high concentrations of contaminants, notably PCBs. It has been identified as an <quot>early action<quot> area by EPA. Important investigation work elements completed in the past few years under EPA have included: a) upland groundwater and riverbank investigation efforts; b) sediment investigation; c) porewater investigation; and d) remedy implementability analysis. In January 2018, an Administrative Steelement Agreement and Order on Conset for Supplemental RI/FS Work and Remedial Design, Amendment No. 1, was complete by EPA and the RM11E Group parties. In March 2018, a draft Basis of Design Report WP was submitted to EPA, and included DEQ review and comment. A revised document (BODR WP) was submitted to EPA. In May 2018, a Recontamination Assessment (upland and in-water) was submitted to EPA on behalf of the RM11E Group. The document is currently under review.

Decode for NarcdID: Project Issues Summary
NARR Comments: At the request of DEQ, site owner/operator entered into an agreement to complete a Portland Harbor source control evaluation at the site. A Stormwater Assessment Workplan dated July 2011 was approved by DEQ, and sampling of site catchbasins has been completed. A report is pending. DEQ also completed a bankline inspection in September 2011, which indicated that most of the site riverbank is well-armored. There is some exposed soil both above and below mean high water, in particular in the northern site. PCB sampling results from the riverbank (collected below ordinany high water) are generall below 100 ug/kg. Catchbasin sampling completed in 2011 identified elevated metals in catchbasin sediment. PCBs and pesticides were not detected. Based on this work, DEQ requested that stormwater sampling be completed under ongoing 1200Z monitoring. Monitoring results for outfalls 2 through 7 was performed in November 2012. PCBs, pesticides, and mercury were not detected; metals and PAHs in two samples were modestly elevated. DEQ will review the results of the next round of stormwater sampling and determine whether data is sufficient to complete a source control evaluation.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Source control evaluation in progress. Riverbank is generally armored and a low risk for erosion. Catchbasin sampling in 2011 identified elevated metals; no PCBs were detected. Followup stormwater sampling in progress. In November 2012 1200Z sampling, PCBs, pesticides, and mercury were not detected. Modestly elevated metals and PAHs (in two samples) were detected, but below Portland Harbor screening values. Storwmater monitoring continues, and a source control evalution is expected in mid-2013. Completion of source control work at the site was delayed pending the collection of additional data by the RM11E Group, including bankline and upland groundwater sampling. A Supplemental RI/FS Field Sampling and Data Report for the RM11E area, including Cargill, was completed in July 2014 and is currently under review. Based on data in the report, Cargill (Temco) submitted a source control evaluation report (dated July 2014) that is currently under review.

NARR Comments:	(11/27/00 GMW/SAS) According to EPA, this is one of a number of former W.R. Grace facilities nationwide that processed or handled vermiculite ore from a mine in Montana. This ore contained asbestos as a by-product. Vermiculite has several uses, such as a soil amendment for house plants.

NARR Comments: (11/27/00 GMW/SAS) EPA Region 10 has added the site to CERCLIS as part of its nationwide investigation of former WR Grace facilities that handled asbestos-containing vermiculite. DEQ has not been involved in the investigation at this site, but will be tracking EPA's efforts to determine whether the past handling of asbestos-containing vermiculite presents any current threats to human health or the environment. (9/4/13 GMW/SAS) EPA conducted a removal action for asbestos between June and Novermber 2006.

NARR Comments: [From EPA Removal Report]: The building was built in the 1940s, and W. R. Grace operated it as Vermiculite Northwest until the early 1990s. The facility was used as a processing plant for vermiculite ore mined in Libby, Montana. W. R. Grace shipped raw vermiculite ore via rail to processing plants throughout the country, including this facility in Portland. At the facility, the raw vermiculite ore was processed for use in consumer and building products, by mixing it with hot air, whereupon it would greatly expand in size. The processed vermiculite had many useful properties; it was a lightweight material that was absorbent, fireproof, and a good insulator. W. R. Grace used the processed vermiculite in a number of consumer and building products, including a soil conditioner for gardening, as house insulation, and as a spray-applied fire-proofing.

 In the late 1990s, a local businessman named Walter Pelett, Sr. bought the building, and he sold it in early 2006 to Greg Nystrom and Walter Pelett III of Priority Delivery, who are the current owners (as of 2007). As a condition for the sale of the building, Mr. Pelett, Sr. agreed to be responsible for any asbestos-related issues.

UNION PACIFIC RAILROAD - ALBINA (Continued) **S102521605**

the site file. Soil: Contaminants detected in soil included metals, PAHs, TPH, PCBs and VOCs. Arsenic, lead, PAHs dibenzo(a,h)pyrene and benzo(a)pyrene, diesel range hydrocarbons and PCB Arochlor 1260 were identified as COIs in the RI. the risk assessment concluded that unacceptable risk was associated with dibenzo(a,h)pyrene and benzo(a)pyrene in shallow soil. Groundwater: Contaminants detected in groundwater included total and dissolved metals,PAHs and TPH. LNAPL: Free-phase petroluem hydrocarbons in the diesl and fuel oil range are present in 2 monitori wells on site and in a few soil borings. The RI concluded that it is stable and not increasing over time but the risk assessment did identify potential risk to possible future excavation workers.

NARR Comments: Remedial Investigation and Risk Assessment was completed in 2011. A Feasibility Study was completed in 2012 and a reccomendation for a Remedial Action to remove PAH contamination in shallow soil in the North Yard and institutional controls for LNAPL in the South Yard are being proposed. The Remedial Action is designed to mitigate upland human health risks at the site. A 30-day public notice and comment period will open on May 1st and a remedy will be determined after public comments are considered. The Portland Harbor Source Control Evaluation at the site is ongoing and is not addressed in the proposed Remedial Action.

Updated Date: 04/26/2012
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soil and surface water are known to have been contaminated; shallow groundwater is also affected. Groundwater contamination and petrleum LNAPL have proven to not be migrating toward the river and LNAPL is imobile. No complete pathways for groundwater on site. Shallow soil pathway to on-site workers is complete, but risks will be mitigated by the proposed remedial (removal) action. Possible migration pathways resulting in sediment contamination include: stormwater runoff, surface soil, erosion, and historic spills discharging into the river.

UNION PACIFIC RAILROAD - ALBINA (Continued) **S102521605**

Decode for NarcdID: Remedial Action
NARR Comments: (GMW 7/25/96) There appear to be areas with significant soil and possibly groundwater contamination at this site. The yard should be placed on the Confirmed Release List. In addition, a preliminary assessment should be conducted to summarize historical operations, spills/releases, and facility features, as well as to evaluate potential exposure pathways. Further state action is a low-to-medium priority. (1/20/00 TBG/SAP) Based on sampling results from a river sediment quality study and from the Portland Shipyard Sediment Investigation (Port of Portland and Cascade General), the UPRR-Albina site has been identified as a potential source of contamination to the Portland Harbor. A Strategy Recommendation was completed on October 1, 1999. An Expanded Preliminary Assessment (XPA) is required to evaluate past waste management practices, potential upland site contaminant sources, and the extent of contamination in near-shore sediment (high priority). (4/20/00 RGS/VCP) DEQ is performing a PA/XPA of the UPRR - Albina Yard using one of DEQ's environmental contractors. (9/26/00 RGS/VCP) The field investigation was performed in August 2000. Results pending. (4/2/01 RGS/VCP) XPA indicated presence of hazardous substances in soil and groundwater on-site and in sediments adjacent to the site. UPRR requested to perform RI of facility. (11/21/01 RGS/VCP) UPRR signed a Voluntary Agreement to perform a RI and Source Control Measures. UPRR submitted a draft <quot>Pre-RI Work Plan<quot> in July 2001. DEQ approved the final work plan in October 2001. (12/23/02 RGS/VCP) The Pre-RI report was submitted in July 2002, and recommended a RI be performed. The RI proposal was submitted to DEQ in November 2002, and was approved by DEQ in December 2002. Final remedial investigation activities were completed at the site in 2010, and a Final Remedial Investigation/Source Control Measures Evaluation Report submitted in November 2011. The report was approved by DEQ, although a number of comments were made to carry forward into the FS. A revised FS work plan was approved by DEQ in July 2011, and a formal FS was completed in February 2012. (4/9/12 M. Romero/VCP) The Feasibility Study evaluated and recommended 4 remedial alternatives to deal with shallow soil contaminated with PAHs in the North Yard and immobile petroleum LNAPL in deepr soils and on the water-table in the South Yard. Soil removal is reccomened for shallow soil in North Yard and restricted access is recommended for imobile petroluem in the South Yard. 30-day public comment period starts May 1

Release Date: 12/22/2015
Description: 2015-3034 Portland. Union Pacific Railroad (888-877-7267) reported that diesel fuel had sprayed out of a locomotive for an unknown reason. They did not have an estimate for how much fuel was sprayed. No waterways were affected, and the company was in the process of hiring a cleanup contractor when I spoke with them last night, although they did not have details on which company was going to be hired or when they were arriving. The UP Case number is 2015-12-22-204RLS

Decode for NarcdID: Contamination
NARR Comments: Possible contamination related to historical activities including shipbulding and operation of a fuel company (with presumed storage and distribution) on-site. These could include metals, PCBs, TPH, volatile and semi-volatile organic compounds, and butyl tins. In limited sampling to date with narrow contaminant anaysis, petroluem hydrocarbons and VOCs (dichlorobenzenes) have been detected in soil, and VOCs (TCE and PCE) and phthalates in groundwater.

PORTLAND CEMENT TERMINAL (Continued) **S108662246**

Updated Date: 08/12/2013
Decode for NarcdID: General Site Description
NARR Comments: The Glacier Northwest Portland Cement Terminal is located on the east bank of the Willamette River, approximately between RM 11.15 and 11.35. The facility is owned and operated by Glacier NW as a cement distribution facility. The site consists of two parcels (North Parcel and South Parcel) with a total area of approximately 5.1 acres, and is largely paved. Bulk cement is delivered by ship, pneumatically conveyed to on-site storage buildings, and then loaded into customer trucks and railcars for off-site delivery. There is bulk distribution only, with no manufacture or processing of cement on site. Small volumes of non-contact cooling water are discharged via a dedicated outfall under a NPDES 100J permit. Stormwater is discharged from the site via three main private outfalls. A private connection to the existing City of Portland stormwater system (discharge point OF-44) is currently being eliminated. Glacier sues common fluids/oils in hydraulic systems, and operates 3 above-ground fuel storage tanks (ASTs). There are no hazardous wastes generated on-site. Historical industrial activity on the North Parcel has included fuel storage/distribution, manufacturing of wooden shingles, and shipbuilding and repair. An aerial photo from approximately 1943 shows the site to contain at least five shipbuilding <quot>ways<quot> and associated structures. Historical activity on the south Parcel has included operation of a cement distribution facility. Some activity related to Ship construction also appears to have occurred on-site.

NARR Comments: Site is located along east bank of Willamette River within Portland Harbor Superfund site. Elevated PCBs and other contaminantss detected in sediment in site vicinity. Site currently operated as cement storage/distribution facility, but was occupied in past by large shipbuilding yard and fuel facility. DEQ has requested source control evaluation. Stormwater Source Control Screening Evaluation Work Plan submitted in February 2011. Revised plan submitted to DEQ in May 2011 and approved. Stormceptor sampling was completed at the site in summer 2011 per the approved work plan. Elevated metals, phthalates, TPH, and PAHs were detected in sediment. Total PCBs were detected to 75 ug/kg. Follow-up stormwater sampling will be completed starting in fall 2011.

Updated Date: 10/23/2018
Decode for NarcdID: Current Site Summary Statement
NARR Comments: Sampling related to Portland Harbor (RM 11E) source control is ongoing. Sediment samples fro three site stormceptors were collected in July 2011 with elevated metals, PAHs, and phthalates detected. Follow-up stormwater sampling (four events, including two <quot>first flush<quot> events) will be performed starting fall 2011. Stormwater sampling completed, and Draft Stormwater Source Control Screening Evaluation submitted to DEQ. DEQ requested additional stormwater sampling and sampling of the south end of the site riverbank. Riverbank sampling completed in fall 2012, and stormwater sampling ongoing. Source control decision expected in mid 2013. June 2013. Results of riverbank sampling and additional stormwater monitorin have been received. Under settlement with EPA 10, RM 11E PRPs have committed to additional site characterization, which is expected to include soil and groundwater sampling at Glacier site. DEQ will wait on receipt of results before completing a source control decision for site. Decision likely near the end of 2013. Revised SCE delayed by additional RM11E site investigation work. A revised Source Control Evaluation incorporating upland data from the RM11E RI/FS was submitted to DEQ at the end of october 2014. In 2015, a riverbank stabilization effort was completed in the southern site. Following additional stormwater sampling, a Source Control Measures Implementation report was submitted to DEQ in November 2016. (10/23/18). Following communication between CalPortland and DEQ regarding the need for phthalate source tracing, a source tracing investigation was completed by Glacier/CalPortland in 2018. Results are presented in a September 27, 2018 DRAFT Phthalate Source Survey letter report. Phthalate issues have not been resolved as of later 2018.

NARR Comments: The <quot>site<quot> includes several properties currently or formerly-owned/leased by PacifiCorp that are located within City Outfall Basins #44 and #44A. These outfalls discharge immediately upstream of the Fremont bridge on the east side of the river. All but one of the properties are located in the vicinity of River and Loring Streets between the bridge and Albina Ave. The other property is an operating substation located west of NE Rodney Ave, between NE Russell and NE Knott Streets. Operating PacifiCorp substations remain on Blocks 71, 81, and 82, while remaining blocks have been redeveloped and are no longer owned or used by PacifiCorp.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Oct. 2010] This site includes a number of tax lots that PacifiCorp currently or formerly owned/leased within City of Portland Outfall Basin #44 and #44A just upstream of the Fremont Bridge. Blocks 71, 81, and 82 contain an active PacifiCorp substation. Blocks 69, 78, 79, 80, and 83 were formerly owned/used by PacifiCorp and have since been sold and redeveloped. Block 83 is known as the Former Tucker Building site (ECSI# 3036) and owned by the City of Portland. The elevated levels of PCBs in adjacent (RM 11E) Willamette River sediments prompted a DEQ source-control (SC) evaluation to determine whether these properties could be PCB sources. Pacificorp signed a source control agreement and was asked to submit a Preliminary Assessment (PA) of all of the Albina properties. Preliminary PAs for the Albina Area and Knott St. properties were submitted in March 2009, and revised reports in November 2009, based on DEQ comments. Subsequent soil sampling adjacent to the 69kV, 11kV, and 115kV operating substation sites revealed low-level PCB contamination. PacifiCorp prepared a SC work plan to address contamination; it was finalized in June 2010, with work completed in October 2010. A SC cleanup report is expected in late 2011. A separate analysis by

PACIFICORP ALBINA RIVERLOTS (Continued) **S109493957**

PacifiCorp on potential PCB migration via preferential pathways (groundwater-to-surface water) is ongoing. DEQ will make a final decision on the previously submitted PAs after reviewing the two reports. (November 2012). Source control investigation, remediation, and upgrade work has been completed for the substation properties. Stormwater sampling completed by Portland BES in spring 2012 did not identify significant PCBs in stormwater downstream of the Albina Riverlots, while stormwater from the more distant Knott St. substation property discharges to outfall 44A and is being diverted to the east side CSO. (December 2012). DEQ approved the Knott St. Stormwater Source Control report on December 21, 2012. Knott St. is not considered a significant source control concern re the Willamette River. DEQ is currently reviewing the source control report for the Albina Substations, and expects to provide comments by the end of 2012. DEQ will follow with a source control determination for both sites. A source control decision for the PacifiCorp - Knott Street substation was completed on April 5, 2013. Albina Properties SCE has been delayed to due ongoing RM11E investigation work and is now scheduled for delivery to DEQ in September 2014. Revised Source Control Evaluation for the Albina Substation properties was submitted to DEQ in August 2014 has been approved. A source control decision has been completed by DEQ and will be fowarded to EPA and Portland Harbor stakeholders in November 2016 for their consideration. DEQ responded to EPA and Five Tribes comments on the source control document, along with revisions to the document, in July 2017. Both the tribes and EPA subsequently concurred with DEQ's assessment that upland sources are effectively controlled. PacifiCorp has developed and will implement a Source Control Management Plan for the active Albina Substation properties (July 2017). Excepting the Tucker Property (ECSI# 3036) that comprises one block of the Albina Properties, DEQ has not issued NFA determinations. All are currently considered low priorities for further action at this time. (September 2018). Substation upgrades are planned for Block 81 (69 kV Yard) in 2018 and 2019. A draft Erosion, Sediment, and Pollutant Control Plan has been prepared, and will be revised and provided to DEQ. Early 2019 work is expected to include generation and management of soil which may contain PCBs. PacifiCorp will keep DEQ updated on site improvements.

NARR Comments: (Aug. 2011) In a letter dated August 19, 2008, DEQ asked Ross Island Sand & Gravel Co. (RIS&G) undertake a Portland Harbor Source Control Evaluation for the property at 1208 N River St. in Portland. This request was based on the detection of elevated contaminants in sediment within the Willamette River in the vicinity of this site. The evaluation was to determine whether the site was a source of ongoing or potential future contaminant releases to the Willamette River. On October 15, 2008, DEQ received a letter from Aaron Courtney of Stoel Rives on behalf of RIS&G that laid out a rationale supporting the conclusion that RIS&G is not a liable party for the contamination cited in DEQ s letter. DEQ again contacted RIS&G in September 2010 to discuss its interest in having a source control evaluation conducted at the RIS&G site. After an exchange of information, RIS&G invited DEQ to tour the site on December 17, 2010. As a result of information obtained during the site visit and a review of additional sediment data collected in the vicinity of the RIS&G site, DEQ rescinded its request for a a source control evaluation. The basis for this decision is as follows: - RIS&G presented a series of aerial photos demonstrating that sand and gravel operations have taken place at the site since the early 1900s, and that the site was never within the footprint of the former Albina Engine Works shipyard. This information significantly diminishes DEQ s concerns that polychlorinated biphenyls (PCBs) are likely to be present at the site (PCBs being the contaminant most notably elevated in river sediments in the area). - Stormwater is managed under an NPDES permit (1200A general stormwater permit for gravel mining operations). All site stormwater is collected and pre-treated by an oil/water separator prior to being discharged to the river via the City of Portland s Outfall 44A. - The site is above river level and the bank is well-armored. - Data collected in the vicinity of the site (including Outfall 44A) by the Lower Willamette Group and the City of Portland include three sediment and one bank soil samples.

ROSS ISLAND SAND & GRAVEL - N RIVER ST. (Continued) **S115330261**

None had elevated PCB concentrations. nother sediment sample collected offshore from Outfall 44A had PCB concentration between 150-300 ug/kg. However, given that sediments closer to the outfall had relatively low PCB concentration, it is unlikely that the offshore PCBs are related to Outfall 44A discharges. Based upon these findings, DEQ determined that the RIS&G site is unlikely to have been a significant source of contamination to the river, or represent a current or future source provided that site operational activities do not change.

NARR Comments: [Aug. 2011] DEQ has determined that the RIS&G site is unlikely to have been a significant source of past contamination to the Willamette River. DEQ has also concluded that the RIS&G site is unlikely to be a current or future source, provided that site operational activities do not change. See documents below for more details. DEQ's evaluation was limited to considering (and ultimately not requiring) a Source Control Decision, and thus did not include a full site review.

NARR Comments: (8/1/95 KAM/SRS) The Industrial Battery building was constructed prior to 1970. The building was shared by Industrial Battery and Macro Manufacturing. The building was abandoned in 1981, when ODOT acquired a right-of-way across a portion of the property for an off-ramp from I-5 to Greeley Avenue. (The property owner would not allow the building to be torn down as part of the right-of-way acquisition, even though the right-of-way cut off access to the site). Multnomah County acquired the building in 1986 through foreclosure, and hired Pegasus Environmental Management Services (PEMS) to perform an Environmental Assessment on the property in 1989. Sampling by PEMS found hazardous levels of lead in soils at the site. The County held off investigating the site further, worried that any actions on its part might make them liable for the cleanup. Finally, in 1993, DEQ reached agreement with the County to investigate and clean up the site. DEQ would pay for the removal of contaminated materials, while Multnomah County would pay to have the building torn down and the site regraded.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The site is located along the right-of-way for a freeway off-ramp. A steep, vegetated hillside is to the north of the site; Greeley Avenue and the Albina Rail Yards are to the southwest. The Willamette River is a quarter-mile southwest of the site. The nearest residence is 300 feet up the hill. Soils at the site are gravelly silts, grading to clayey silts at 2 feet bgs. The abandoned building was occupied by vagrants, who covered the walls with graffiti <quot>tags<quot> and spray-painted murals.

NARR Comments: (8/1/95 KAM/SRS) Resampling by DEQ's Site Response Section (SRS) found high levels of lead in a soil pile in front of the site (82,000 ppm total lead; 450 mg/l TCLP lead) and in a sump inside the building (130,000 ppm total lead; 240 mg/l TCLP lead). The soil pile was removed by Riedel in November 1993; 21 tons of contaminated concrete and soils from the sump were removed in May 1994. Multnomah County razed the building in the summer of 1994. (The north wall of the building doubled as a retaining wall for the hillside. This wall was left standing; the other concrete wall slabs were stacked up behind this wall. The concrete was covered with fill, graded and reseeded). SRS has determined that no further action is necessary at this site.

NARR Comments: The King Crusher site is a 0.22-acre property located on the southwest corner of Northeast Wasco Street and Northeast 2nd Avenue in Portland, Oregon. The vacant, grass-covered lot is owned by the PDC and is comprised of Multnomah County Tax Lots 1400 and 1500. Surrounding land use includes surface parking lots to the north, west, and south, an undeveloped lot to the east, and a residence to the northeast. The site is currently zoned central residential, which allows for high density dwellings with ground level commercial space.

NARR Comments: (1/11/12 RWA/VCP) The following is a summary of previous site investigations that have led to DEQ's no further action determination:. Phase I Environmental Site Assessment and Limited Building Survey In 2003, the PDC retained Hahn and Associates, Inc. (HAI) to perform a Phase I Environmental Site Assessment of the property. The Phase I included a site history, a geophysical survey of the property subsurface, and a regulated building materials survey and sampling of lead paint and asbestos. The building materials survey also included a PCB and light fixture assessment to determine the presence of PCB containing transformers and light ballasts. Several recommendations for further investigation were presented in the Phase I report, including: 1. Determining if the active 2,000-gallon HOT, which provided heat to the commercial building, had released petroleum to the subsurface. 2. Conducting additional soil sampling in the vicinity of the former 1,000-gallon gasoline UST, fuel pump, and 250-gallon diesel above ground storage tank (AST) located on the north side of the commercial building. Although DEQ s LUST program issued a NFA for the gasoline UST, only one soil sample was collected from the tank excavation and analyzed by EPA Method 418.1. Method 418.1 was less stringent than the analytical standard in 2003. Because DEQ does not regulate ASTs, no previous sampling was performed in the area of the diesel AST. 3. Conducting an additional subsurface investigation on the northern portion of the property where an anomaly was noted during the geophysical survey. Building materials containing greater than 1% asbestos were identified at various locations within the commercial building. None of the painted surfaces at the property exceeded the United States Department of Housing and Urban Development lead-based paint criteria. Fourteen

KING, IVAN C. (Continued) **U000433548**

light ballasts in the commercial building were identified as potentially containing PCBs, however none of them appeared to have leaked. Phase II Environmental Site Assessment Report To address the recommendations presented in the Phase I report, an investigation and sampling event was completed in 2003 by HAI. Nineteen soil samples were collected from sixteen push probes, advanced up to 24 feet bgs. The borings were advanced on the north side of the property in the areas of the former UST excavation and geophysical anomaly, and in the vicinity of the active HOT located at the southwest corner of the commercial building (see Attachment 3). No groundwater was encountered in any of the borings. Numerous samples were collected at depths ranging from 1.5 to 24 bgs. Sample analysis included Total Petroleum Hydrocarbons (TPH-HCID), TPH-gasoline (Gx), TPH-diesel (Dx), volatile organic compounds (VOCs), and total (RCRA 8) metals. Laboratory analysis was based on proximity of the soil samples to suspected source areas and field screening results. All samples analyzed for TPH-HCID, TPH-Dx, VOCs and BTEX were non-detect for contaminants. Gasoline was detected (0.663 mg/kg) only in sample B-3, collected from the former gasoline UST excavation. Three soil samples were analyzed for total metals. Arsenic, barium, chromium, and lead were detected up to 6.77 mg/kg, 177 mg/kg, 21.2 mg/kg, and 70.2 mg/kg, respectively. The sample results from the Phase II investigation did not show levels of contaminants above relevant DEQ or EPA RBCs in any samples. Therefore, the Phase II report concluded that appropriate management and disposal measures only need to be employed if previously unidentified areas of petroleum contamination are encountered during site redevelopment. The report further noted that although analysis of soil samples collected adjacent to the active HOT showed no presence of contamination, the soils directly beneath the HOT will need to be assessed for petroleum impacts, and the HOT appropriately decommissioned, following termination of use. Finally, the Phase II recommended that appropriate abatement measures for asbestos, lead paint, and PCBs be implemented during building demolition to not cause a release of contaminants into the environment. HOT Cleanup and Demolition of Commercial Building Prior to demolition of the commercial building, the HOT was decommissioned by removal in 2003. During the decommissioning, petroleum contaminated soil was observed beneath the tank. Approximately 115 tons of petroleum contaminated soil was removed and disposed of at the Hillsboro (Subtitle D) Landfill. Confirmation samples collected from the excavation were below 500 mg/kg for TPH-Dx. The HOT program issued a closure letter for the HOT in July, 2003. In 2003, the commercial building and concrete slab were removed and building materials recycled or disposed of appropriately. IRS Environmental submitted notification forms and a waste shipment manifest to DEQ s Asbestos Program for the disposal of 14 bags of boiler insulation and floor tiles at Hillsboro landfill. A certificate of recycling for 31 pounds of ballasts was issued by Electronic Product Recycling and Recovery on November 10, 2003. Following the removal of the building slab, a 1,250ft2 area of petroleum-impacted soil was observed on the south side of the property. Approximately 60 tons of impacted soil were removed to a depth of 10 to 12 inches and disposed of at Hillsboro Landfill. No confirmatory samples were collected during this work. PDC Supplemental Sampling Investigation In 2010, the PDC collected three shallow soil samples (10-14 bgs) from the commercial building slab excavation area (see Attachment 4). The three samples were composited into one sample and analyzed for TPH-Dx, TPH-Gx,

KING, IVAN C. (Continued) **U000433548**

VOCs, polycyclic aromatic hydrocarbons (PAHs), PCBs, and leachable lead, chromium, and cadmium. The only contaminants detected were the petroleum constituents benz(a)anthracene (4.69 ug/kg), chrysene (4.69 ug/kg), fluoranthene (7.67 ug/kg), phenanthrene (4.95 ug/kg), and pyrene (8.08 ug/kg). None of the detected contaminants exceed DEQ RBCs for the most conservative exposure pathway associated with the site residential direct contact. Conclusions Contamination detected at the King Crusher site has been modest, and well below relevant screening values for residential exposure. Detected contamination is shallow, and is not expected to present a risk to groundwater present at greater than 100 feet bgs at the site. PCBs have not been detected on-site, and metals are only slightly above background. Therefore, DEQ concludes that current environmental conditions at the site do not pose an unacceptable risk to human health and the environment, and therefore, the property meets the requirements of the Oregon Environmental Cleanup Laws. No further action is therefore required. A health and safety plan should be developed prior to site redevelopment activities as per OSHA 1910.120. If contaminated media are encountered during site redevelopment, the materials should be handled in accordance with all applicable regulations. (9/17/14, RWA/VCP) A six-story mixed use building with 47 residential units and no sub-grade parking/development is proposed for the site. Based on a review of the proposed development plan, the NFA issued for the site in 2012 will not be affected and no further actions are needed. As is presented in the NFA, a health and safety plan should be developed prior to site redevelopment activities as per OSHA 1910.120. If contaminated media are encountered during construction, the materials should be handled in accordance with all applicable regulations.

Decode for NarcdID: Site History
NARR Comments: Historical use of the property included residential from 1909 to approximately 1957. In 1957, a 5,000 ft2 commercial building was constructed on the south side of the property that included a garage, office space, and a living area for a rock crushing equipment repair and resale business. A 2,000-gallon HOT provided heat to the building until it was removed in 2003. In 1967, the residence on the northern portion of the property was demolished and replaced with an asphalt parking area and gravel storage lot. In 2004, the commercial building was demolished and the concrete slab removed from the site. The site is currently a grass-covered, vacant lot.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Feb 2017] Site redevelopment completed in 2015/2016. Minor petroleum-contaminated soil reportedly encountered during site grading and excavation work was removed and taken to Hillsboro Landfill for disposal. One 2,200-gallon heating oil UST was found in 2015, decommissioned and removed. No contamination was found associated with this UST. Project details were provided to DEQ via phone, no closure report was submitted.

 [Jan 2012] DEQ concludes that environmental conditions at the site do not pose an unacceptable risk to human health or the environment, and therefore, the property meets requirements of Oregon Environmental Cleanup Laws. No further action is required. A health and safety plan should be developed prior to site redevelopment activities as per OSHA 1910.120. If contaminated media are encountered during site redevelopment, the materials should be handled in accordance with all applicable regulations.

NARR Comments: A service station operated at the property from approximately 1936 through 1964. 3 USTs and a hydraulic hoist were decommissioned by removal. Low levels of petroleum-contaminated soil remain following soil removal and confirmation soil sampling. On the southern portion of the property, pcs was encountered at approximately 11 feet bgs during geotechnical drilling. additional subsurface investigation indicated that pce extended to between 50 and 60 feet bgs in this area. Owner will be redeveloping the property for urban residential use. Owner plans to remove 18 feet of overburden soil for a parking garage below the living quarters. Consultant has proposed engineering controls.

NARR Comments: Since at least 1909 a sash and door company with a small planing mill operated at the site. The property was a vacant lot from 1935 through 1944. In the mid 1940s, several adjoining single-story buildings were constructed on the eastern portion of the property. After construction of the buildings in the 1940s, the site has been used by a saw sharpener, a machine shop, and most recently as small engine repair (e.g. lawn mowers and chainsaws) and automotive repair shop.

NARR Comments: (2/18/00 JMW/SAP) During construction of the Courtyard Hotel, CSM's contractor encountered contaminated soil in a demolished church basement on-site. Soil and concrete basement floor were removed. Soil under basement floor was clean. Site entered the Independent Cleanup Program (ICP) in April 1999. Based upon submitted information, DEQ determined no further action (NFA) is required to address contamination for the area of the site where the excavation took place (former church basement).

Environmental Interest/Information System:
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Decode for NarcdID: General Site Description
NARR Comments: A fire broke out at an abandoned 1.8-acre warehouse at 1300 N River St. in Portland (the Site) on the evening of May 14, 2017. The warehouse, in a densely populated, mixed residential and commercial area, was constructed with asbestos containing materials (ACM). Airborne releases of ACM occurred during the fire and residual ACM remains at the Site in the fire s aftermath. The U.S. Environmental Protection Agency (EPA) and DEQ formed a unified command and conducted an emergency action in May/June 2017 to find, collect, and properly dispose of all wind-dispersed ACM in a three square mile area of downtown Portland. EPA is now conducting a time-critical removal of remaining ACM in the former building s debris pile. The warehouse, with a history of safety, structural, and other violations, was constructed about 30 feet above water level on the bank of the Willamette River. The structure extended over the river, supported by wooden pilings. From information provided to EPA, the warehouse was 30 to 40 feet tall, with a calculated interior volume of about 115,000 cu. yds. Based on the former building s size, age, and type of roofing material, industry experts estimated the debris pile size at about 20,000 cu. yds., all of which is considered extremely friable ACM.

Decode for NarcdID: Site Ownership
NARR Comments: Mr. Stan Herman, with a mailing address of 5609 NE 60th Ave., Vancouver, WA 98661, owns the former warehouse and land above the ordinary low water line for the Willamette River. In the aftermath of the fire, EPA determined that while he has been cooperative, Mr. Herman was unable to undertake the needed time critical work. EPA then proceeded with its time critical removal at the Site, intending to recover its expenses from the owner at a later date.

Updated Date: 10/23/2018
Decode for NarcdID: Current Site Summary Statement
NARR Comments: After the fire, EPA bulk samples from the debris pile, analyzed by Polarized Light Microscopy, showed 16 layers of material, four containing chrysotile asbestos. These samples contained less asbestos (40%) than off-Site debris samples collected immediately after the fire (60% to 90%); this may be due to thermal degradation of chrysotile in the hottest part of the fire. If this is the case, higher percentages of asbestos may be present further into the debris pile where the fire burned cooler and for a shorter period.

RIVER STREET WAREHOUSE FIRE SITE (Continued) **S114555078**

Furthermore, EPA collected samples from easily accessible on-site locations that may represent only about 20% of the total material/area. All Site debris is considered ACM, due to extreme friability in the burned roofing material and the fact that Site wastes are comingled. EPA initially used a temporary adhesive compound (tackifier) to mitigate additional releases of asbestos fibers, but a more permanent remedy was needed. As a result, in late September 2017, after obtaining Site access from the property owner, EPA began removing ACM from the decking of the former warehouse structure. However, inspections revealed major concerns about the stability of existing pilings and decking, which are degrading and threaten continued release of asbestos fibers. Although EPA had previously installed temporary metal pilings to support the working platform needed to safely remove remaining debris, EPA initiated construction of two trestles to enhance safety in completing the job. During trestle construction, EPA discovered that the decking contained another layer of asbestos. EPA advised DEQ that they could not remove it, because the cost to do so would exceed EPA s authorized removal funding (due largely to the additional cost of debris disposal), and go beyond what was permitted under the owner s Site access agreement. Through October 2017, EPA had removed about 30% of decking debris. In early November 2017, DEQ and EPA met to discuss options to complete ACM removal from the Site. EPA indicated that it could perform removal of the decking but lacked the funds to dispose of the removed ACM. EPA estimated disposal costs at approximately $400K - $500K.) DEQ suggested the possibility of using funds from the Orphan Site Account for ACM disposal costs. If DEQ Orphan funding is approved, completion of construction of the second trestle and subsequent debris removal could be expected by early January 2018. Once ACM debris is removed and disposed of, EPA intends to remove the trestles and temporary metal pilings, as well as demobilize all personnel and equipment. Prior to demobilization, the upland and riverbank were capped with 2 or more feet of clean rock for stability purposes. Following emergency response actions, sampling of the site bankline and beach (exposed land below the toe of the bankline during low water) were sampled by an EPA contractor. Numerous contaminants were detected at modest levels (see Webdocs for results). EPA and DEQ have determined that the site upland and riverbank do not represent a signficant recontamination concern given the presence of cover materials.

NARR Comments: (1/24/03 SMF/SAS) DEQ Northwest Region s Underground Storage Tank (UST) Program referred the site to Site Assessment in November 2002 after perchloroethylene (PCE) vapors were detected in subsurface soils and indoor ambient air at the Former Portland Cleaning Works facility. The PCE vapors were discovered during an investigation of off-site petroleum migration from a historic bulk-petroleum storage facility (Sunset Fuel Company, DEQ LUST log #26-91-0181) located immediately north of the former dry-cleaning facility.

NARR Comments: Residential properties adjoin the Cleaning Works site on the east, southeast, and south. Since the full extent of subsurface PCE contamination has not been defined, PCE vapors could represent a potential vapor intrusion threat to these nearby residences. Further investigation of PCE concentrations in the building s indoor ambient air appear warranted. Houses adjoining the Former Portland Cleaning Works site are 60-112 years old. Given their age, foundations of these adjoining property structures are probably unable to adequately attenuate high soil vapor concentrations of PCE or its potential breakdown products (trichloroethylene, dichloroethylenes, vinyl

SAVING GRACE WILLIAMS LLC (Continued) **S105959691**

chloride). Subsurface contamination at the Cleaning Works site could also represent a significant health threat for potential utility trench workers.

NARR Comments: (1/24/03 SMF/SAS) The full horizontal and vertical extent of on-site contamination remains to be determined; it also remains unclear if all contaminants beneath the Cleaning Works building foundation originated from on- or off-site releases. However, it seems likely that the PCE vapors originated from an on-site release. Further investigation is therefore needed, under a high priority, to determine the full extent of contamination beneath the former dry cleaner building foundation. Additional indoor ambient air monitoring will also be needed to assure that contaminant vapors within the former dry cleaner building do not present unacceptable health risks to the building s occupants. Because PCE was detected in shallow soils beneath the former dry cleaner building s foundation at a level above EPA s Target Soil Gas Concentration for potential intrusion into buildings, the site was added to DEQ s Confirmed Release List (CRL). (12/20/10) Soil vapor extraction system in place and operating passively. Additional indoor air samples being collected to evaluate effectiveness of system in winter conditions. (7/16/12) Conditional NFA issued.

NARR Comments: Mortenson Development submmitted an ICP report for the construction of a new Hyatt Regency Convention Center Hotel. The report adressed a remedial action to remove 3 historic USTs and a hydraulic elevator shaft. Soil sample confirmation indicated PAHs were exceeding RBCs in five locations; and a soil excavation was completed to remove all soil with contaminant detections exceeding residential RBCs, extending from ground surface to 15 feet. Five out of 34 samples had arsenic concentrations exceeded residential RBCs, however, a 90% upper confidence limit calculation determined that the arsenic concentrations site-wide are below corresponding background (8.8 mg/kg).

Updated Date: 04/07/2006
Decode for NarcdID: Contamination
NARR Comments: Soils containing limited heavy petroleum contamination (3-4 cubic yards containing up to 636 ppm of PS-300) were left in place along the southeast foundation of the Albers Mill Building following a 1989 underground storage tank (UST) removal. Low level petroleum contamination (172 ppm) was also detected when a 1,000 gallon PS-300 UST was decommissioned in place at the northwest corner of the Albers Mill Building in 1988. A pushprobe boring (P-12) advanced about 135 feet northwest of the Albers Mill Building in July 2003 encountered soils with a heavy oil concentration of 905 ppm at 8-12 feet below ground surface (bgs). The full vertical and horizontal extent of this contamination was not defined. The boring was located about 200 feet north of the heating oil tank decommissioned at the northwest corner of the mill building in 1988, and appears unlikely to be related to the minor tank release detected in 1988. Groundwater sampled from a temporary well (B-1) near the middle of the site's southwestern property line in April 2005 contained copper at a concentration of 88 ppb. The Federal Recommended freshwater Contaminant Maximum Criterion for copper is 13 ppb. Various borings advanced on the northwestern two-thirds of the site encountered fill debris, including bricks, concrete, wood, metal, glass, and organics, at depths ranging from 0- to 25 feet bgs (borings B-5 from August 1988, and B-3 through B-8 from February 2004; Figure 11)(pushprobes P-6 and P-10 through P13 from July 2003; Figure 12) . Similar debris was encountered in fill on the Waterfront Pearl Condominium Construction site (ECSI #4535), just beyond the Albers Mill Property's northwestern property line. Elevated concentrations of metals and polynuclear aromatic hydrocarbons (PAHs) appear to be associated with debris buried on the Waterfront Pearl site. Soils initially excavated just northwest of the Albers Mill Property contained concentrations of PAHs that exceed residential soil Preliminary Remediation Goals (PRGs) (see Figures 9 and 10). Elevated concentrations of arsenic (up to 16 ppm) were also detected in some of the initially-excavated soils. Subsurface soil samples collected across the two Waterfront Pearl tax lots in October 2005 through February 2006 contained concentrations of copper, lead, mercury, and nickel above local background concentrations, although lead was the only metal detected at a concentration that exceeded residential soil PRGs; lead concentrations exceeded the residential soil PRG in less than 3-percent of the samples, though. Like the neighboring Waterfront Pearl Condominium Construction site, buried debris has frequently been encountered in subsurface at the Albers Mills site. Contaminants have also been detected in the Albers Mill site's subsurface soils and groundwater, although it is not known if the character and extent of contamination is similar to that found at the nearby Waterfront Pearl or Union Station Parcel A North sites. Subsurface soils and groundwater at the nearby Union Station Parcel A North site (ECSI #1962) are contaminated with elevated concentrations of petroleum (PAHs) and metals; PCBs are also present in subsurface soils at the Union Station Parcel A North site.

NARR Comments: The concrete-steel bow sections from salvaged Liberty ships were incorporated in the fill material on Tax Lot 400, just beyond the Albers Mill Property's northwestern property line. It is unclear if Liberty ship hulls are also buried on the Albers Mill Property. There may be potential contaminants associated with these hulls, such as asbestos or PCBs. There is no indication that Liberty shipp hulls recovered from Tax Lot 400 were examined for potential contamination.

Decode for NarcdID: General Site Description
NARR Comments: The 5-story Albers Mill Building, a former cereal and grain mill listed on the National Register of Historic Places, is located on the southeastern third of the site, and is now used as a commercial office building. The northwestern two-thirds of the site is occupied by a partially-landscaped, asphalt-paved, pay parking lot associated with the Albers Mill Building. The Willamette River forms the site s northeastern boundary; NW Naito Parkway forms the site s southwestern boundary. The Waterfront Pearl Condominium Construction site (ECSI #4535) lies along the site s northwestern property line; an elevated section of the Broadway Bridge overlooks the site at its southern boundary. The McCormick Pier Condominiums are located along the south side of the Broadway Bridge. The Union Station Agricultural Marketing Center site (also known as Union Station Parcel A North) (ECSI #1962) is located directly across NW Naito Parkway, southwest of the site. The upstream boundary of Portland Harbor federal superfund cleanup site (ECSI #2068) lies 1.9 miles downstream from the site.

Updated Date: 10/23/2014
Decode for NarcdID: Project Issues Summary
NARR Comments: There has been very limited chemical characterization of subsurface fill on the northwestern two-thirds of this site. Debris encountered in the subsurface appears very similar to that encountered on the neighboring Waterfront Pearl Condominium Construction site. Subsurface soils excavated from the Waterfront Pearl site contained concentrations of PAHs and lead that exceeded residential soil PRGs. Further investigation is needed to characterize potential contamination in fill on the northwestern two-thirds of the Albers Mill Property. A groundwater sample collected along the southwestern edge of the Albers Mill Property contained a concentration of copper that exceeded the Federal recommended freshwater CMC (acute aquatic toxicity) for copper. Groundwater with elevated copper concentrations could represent a threat to aquatic life in the Willamette River. Detectable chromium and zinc were also present in the groundwater.

ALBERS MILL PROPERTY (Continued) **S108663486**

However, groundwater metals concentrations were lower near the center of the property. It is possible that the site's groundwater contamination originated at the nearby (upgradient) Union Station Parcel A North site, so it may be premature at this time to propose adding the Albers Mill Property to the Confirmed Release List or Inventory based on existing groundwater analyses - the site may simply lie within a local groundwater contamination area.

NARR Comments: Subsurface soil and groundwater contamination is present beneath a portion of the site that is largely covered by an asphalt-paved parking lot. Contaminated groundwater on this portion of the site could eventually discharge to the Willamette River, and adversely affect aqauatic life within the river. A stormwater sewer line that discharges to the Willamette River is located along the northwest side of the Albers Mill building. The stormwater line and bedding could act as a preferential migration pathway for contaminated groundwater to reach the river. The site's subsurface contamination could also represent a potential human health threat to future utility trench workers or future construction workers if the property is redeveloped for condominium construction. The planned Waterfront Pearl condominiums will have underground parking structures that will likely require a long term groundwater dewatering system. Dewatering activities at the Waterfront Pearl site could intercept or otherwise alter groundwater contamination at the Albers Mill Property, or a potential groundwater contamination plume originating at the nearby Union Station Parcel A North site. Further investigation is needed to define the source and extent of groundwater contamination beneath the Albers Mill Property.

NARR Comments: The parcel immediately north of the Albers Mill site is being redeveloped for residential use; residential redevelopment has also been proposed for the northwestern two-thirds of the Albers Mill site. Contaminated subsurface soils exposed during potential future excavating activities at the Albers Mill site could represent a potential health threat to residents, as well as to future construction workers and utility trench workers. Contaminated groundwater at the site could represent a potential ecological threat to freshwater aquatic life in the Willamette River.

NARR ID: 5748009

Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: Oregon Water Resources Department (OWRD) has records for five industrial wells within 0.5 mile south of the site. The nearest is a well owned by SP&S Railroad, located about 500 feet southeast of the site, although OWRD records indicate that the well was buried without decommissioning. Three industrial wells are located along NW Hoyt Street, about 0.25 mile south of the site. Fifteen dewatering wells are located near NW 12th and Marshall Street, between 0.25- and 0.5 mile west of the site. Day Lite Meat Market installed a 180-foot deep well just over 0.5 mile south of thwe site, although its well log indicates that the well is not used. The nearest well specified for domestic use was constructed about 0.75 mile south of the site in 1911 (located near SW 5th and Washington). It is not known if the well is still being used. It appears very likely that dewatering wells will be installed at the Waterfron Pearl Condominium site immediately north of the site.

NARR Comments: Direct contact with any subsurface contamination is quite limited under the site's current configuration: the Albers Mill Building occupies the southeastern one-third of the site; the northwestern two-thirds of the site is predominantly covered by an asphalt-paved

ALBERS MILL PROPERTY (Continued) **S108663486**

parking lot. However, limited landscaping is present on the paved parking area, along the parking area's southwestern edge, and as a greenspace buffer between the parking area and river. Future redevelopment of the site could expose construction workers to potential uncharacterized subsurface contamination. A municipal stormsewer passes along the northwestern edge of the Albers Mill Building, from NW Naito Parkway and the Willamette River. There are four underground municipal water supply lines associated with the site, originating along NW Naito Parkway: 1) a water line passes along the full length of southeastern side of the Albers Mill Building, 2) one enters the central southwestern foundation of the Albers Mill Building, 3) one extends about 50 feet onto the property near the center of the southwestern property line, and 4) one appears to extend about 50 feet onto the property about 50 feet south of the property's northwest corner. Subsurface contamination could represent a potential human health risk for future utility trench workers.

NARR Comments: The Albers Mill Company at one time operated the largest cereal and grain manufacturing company on the Pacific Coast. The Portland mill was originally constructed in 1909-1911. At least as far back as 1889, the site was occupied by docks and grain storage warehouses that were constructed on pilings. The warehousing was demolished in 1965-1966. Addition of 5-30 foot of fill to the northwest end of the site was begun in 1966. The fill may have included concrete-steel bow sections of scrapped Liberty ships. Aerial photographs indicate that additional fill may have been placed along the river and northwest property line sometime after 1980. The mill itself was renovated in 1989 for use as a commercial office building. A 1,000 gallon PS300 fuel oil storage tank installed at the northwest corner of the mill building in 1963 was decommissioned in December 1988 by filling with cement grout. Soil with low-level petroleum-contamination (172 ppm) near the tank was left in place. Six other USTs (one 12,000 gallon, four 1,000 gallon, and one 500 gallon) installed beneath the Broadway Bridge in 1950 were removed by the Port of Portland in January 1989. Approximately 1,200 cubic yards of petroleum-contaminated soil was removed; 3-4 cubic yards of soil containing up to 636 ppm petroleum was left in place along the Albers Mill Building foundation. The northwestern two-thirds of the site was paved with asphalt, and is used as parking for the Albers Mill Building, as well as a pay-parking lot. In October 2005, excavation was begun on property adjoining the northwest edge of the site for construction of the Waterfront Pearl Condominiums. Design plans originally specified construction of four 10-story buildings on undeveloped portions of three adjoining tax lots. Two buildings were to be constructed on the two northwestern tax lots (Tax Lots 300 and 400), owned by the H. Naito Corp; two were to be constructed on the parking lot area on the northwestern two-thirds of Tax Lot 100 (the Albers Mill Property), owned by the Albers Mill Building Partnership. However, a sales agreement between the two property owners had not been reached by May 2005, so construction proceeded only on the two northwestern

ALBERS MILL PROPERTY (Continued) **S108663486**

buildings. Construction plans at the Albers Mill Property remain unclear at this time.

Created By: SFORTUN
Created Date: 12/14/2005
Updated By: CHARMAN
Updated Date: 11/07/2006
Decode for NarcdID: Contamination
NARR Comments: Petroleum, PAHs, and metals have been detected in subsurface soils at the site. Soils being excavated from Tax Lot 400 are contaminated with concentrations of benzo(a)anthracene, benzo(b)fluoranthene, and benzo(a)pyrene that exceed EPA Region IX Residential Soil Preliminary Remediation Goals (PRGs). Benzo(a)pyrene has been detected in subsurface soils at concentrations that exceed the Industrial PRG. Subsurface soils have also contained chromium, copper, lead, mercury, and zinc above DEQ Ecological Risk Assessment screening values for plants, birds, invertebrates, and/or mammals. Deeper soils initially excavated from the site and hauled to Scappoose for disposal contained arsenic, barium, and leachable lead above DEQ Ecological Risk Assessment screening values for plants, birds, and/or freshwater aquatic life. Excavated soils are currently being sent to Hillsboro Landfill for disposal, although debris-free soils will be sent to a Tigard Sand and Gravel pit for disposal as clean soils. (11/7/06 CWH/SAP) Between November 7, 2005 and April 7, 2006 approximately 74,000 tons of soil, primarily historic fill materials, were delivered to the Hillsboro Landfill. Between March 14 to April 4, 2006 soils were sampled from the excavation walls and bottom to determine residual concentrations of PAHs and metals (Pb, Hg, Zn). The confirmation samples from the excavation were developed into exposure point concentrations and evaluated for risk to human health in a residential setting for the contaminants of potential concern -

WATERFRONT PEARL CONDOMINIUMS CONSTRUCTION SITE (Continued) **S107543475**

benzo(a)pyrene and dibenz(a,h)anthracene. No unacceptable risks to human health were calculated. The most likely ecological exposure pathway was determined to be surface runoff from the site to the Willamette River. To evaluate this pathway, two soil samples were taken from the remaining embankment along the river in August of 2006. These soil samples were evaluated for PAHs and the metals lead, mercury and zinc. All concentrations were below freshwater sediment Probable Effects Concentrations (PECs) for benthic invertebrates establish as part of the Joint Source Control Strategy (JSCS) for Portland Harbor (see http://www.deq.state.or.us/nwr/PortlandHarbor/JSCS.htm) - except for one sample (BURM01) that measured lead at 128 ppm - equal to the sediment PEC for lead.

NARR Comments: Soils that were first excavated from the site (Tax Lot 400) were initially sent to Scappoose for disposal as clean soils. Those soils have now been removed to Hillsboro Landfill for disposal. Site soils are currently being visually examined for debris as they are being excavated. Soils with significant wood debris are being sent to Hillsboro Landfill for disposal. Soils with no visible wood debris will be sent to a Tigard Sand and Gravel pit for burial as clean soils.

Updated Date: 02/22/2006
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Local environmental attributes and special receptors of note: This site is located within DEQ's definition of a Vulnerable Area (VA) for surface waters, (water quality limited for toxics and Oregon Health Division Health Advisory, mercury in fish tissue). This site also lies directly across the river from a high poverty area. The site was formerly a paved parking area, as well as the location of the former Liberty Ship Memorial Park, but is now being redeveloped for condominiums. Fill was placed on the site at some time in the past. Soils being excavated from Tax Lots 400 are contaminated with concentrations of benzo(a)anthracene, benzo(b)fluoranthene, and benzo(a)pyrene that exceed EPA Region IX Residential Soil Preliminary Remediation Goals (PRGs). Benzo(a)pyrene has been detected in subsurface soils at concentrations that exceed the Industrial PRG. Excavated soils are currently being sent to Hillsboro Landfill for disposal, but debris-free soils will sent to a Tigard Sand and Gravel pit for disposal as clean soils. Subsurface contaminants could represent a potential threat to construction workers or utility trench workers. Contaminated groundwater could discharge to the Willamette River, which is migratory habitat for Threatened and Endangered salmonids.

Updated Date: 11/07/2006
Decode for NarcdID: Remedial Action
NARR Comments: (11/22/05 SMF/SAP) Site recommended for site screening; contamination discovered during site construction. (11/7/06 CWH/SAP) Waterfront Pearl Limited Partnership entered into DEQ's Voluntary Cleanup Program via a letter agreement dated January 17, 2006. Removal of soils, primarily historic fill, occurred between November of 2005 and April of 2006. Approximately 74,000 tons of the fill material was removed and taken to the Hillsboro Landfill. Confirmation sampling of excavation bottom and accessible sidewalls took place near the end of the excavation activity in March and April of 2006. Confirmation samples were evaluated for PAHs and several metals. Contaminants of Potential Concern (COPCs) for human health in a residential setting, were determined to be benzo(a)pyrene and dibenz(a,h)anthracene, based on frequency of detection in confirmation samples. A quantitative risk assessment (RA) showed that there were no unacceptable risks to human health. Ecological risks were evaluated by comparing two surface soils samples, acquired from the near shore area of the site in August of 2006, to freshwater sediment Probable Effects Concentrations (PECs) for benthic invertebrates developed as part of the Joint Source Control Strategy for Portland Harbor. The soil samples were tested for PAHs, lead, mercury and zinc. Lead was detected in one sample at 128 ppm, which was equal to the PEC, but all other concentrations were below the PEC levels. Based on the

WATERFRONT PEARL CONDOMINIUMS CONSTRUCTION SITE (Continued) **S107543475**

Human Health Risk Assessment and screening-level ecological risk assessment, DEQ has determined that no further action is necessary. DEQ will go out for public comment on December 1, 2006.

NARR Comments: The site is predominantly former blacktop-paved parking lots and the location of the former Liberty Ship Memorial Park, where concrete hulls from scrapped liberty ships were buried sometime after World War II. Much of the site was filled at sometime in the past. Waterfront warehousing and a riverfront pier occupied the site, historically. An abandoned railroad spur is located along the southwestern edge of the site. The vacant portion of the site are currently being redeveloped for construction of hi-rise condominiums.

Updated By: KDANA
Updated Date: 05/16/2019
Decode for NarcdID: Site History
NARR Comments: The buildings that comprised Centennial Mills were constructed on the northwestern two-thirds of the current site from 1910 through the 1930s. The southeastern third of the current site, where a ferry landing had been located, was acquired by Centennial Mills in 1936. By 1950, the area had been filled in for use as a parking lot. The Portland Development Commission (PDC), now known as Prosper Portland, acquired the site in 2000. In 2001, the parking lot was remodeled for use as a horse paddock for the City of Portland's Mounted Patrol Unit. The PDC entered the site into DEQ's Voluntary Cleanup Program in January 2009. Five underground storage tanks (USTs) were present at the site. A 1,000-gallon gasoline UST, a 1,000-gallon diesel UST, and a 300-gallon diesel UST, all used for fueling fleet vehicles, were installed between 1943 and 1953 and were decommissioned by removal in 1989. A 12,000-gallon heating oil tank (HOT), used to fuel the mill boiler, was also installed around 1950 and was decommissioned in-place in 1990. (The PDC subsequently removed the tank in 2001). Finally, a 1,500-gallon HOT, likely installed in 1910 and used prior to the installation of the 12,000-gallon HOT, was decommissioned by removal in 2009.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Centennial Mills operated a flour mill on the west bank of the Willamette River from 1910 to 2000. The mill complex remains in the northern site, while the south portion of the site is now occupied by the Portland Mounted Patrol horse paddock. PMP also occupies a small portion of the mill building; the historical mill building complex is otherwise vacant. A series of investigation events have occurred at the CM site to determine the nature and extent of site-related contamination. these have included sampling of upland soil, groundwater, and stormwater, and sampling of Willamette River sediment adjacent to the site. Modest levels of metals and PAHs have been detected in soil, some exceeding risk-based concentrations for urban residential or occupational exposure. Groundwater impacts are minimal, with the exception of petroleum contamination including some free product located in backfill around the Tanner Creek Sewer, which crosses the site before discharging to the Willamette. This contamination may be from both on and off-site sources, but is very localized. Remedial investigation activities have been completed. A draft source control evaluation was submitted to DEQ in January 2012 (the site is located at the upstream end of the Portland Harbor Superfund site), and a revised SCE in April (dated March 21, 2013). Source control concerns appear to be mininal, and DEQ will proceed with a source control decision for the site. On a separate track, site owner Portland Development Commission is proceeding with completion of a risk assessment and feasibility study for the upland portion of the site, which is slated for redevelopment. Based on modestly elevated levels of metals and PAHs in soil, site capping will likely be necessary as part of site development. (November

CENTENNIAL MILLS DIV - ADM MILLING CO (Continued) **1000642461**

2013), A draft SCD has been completed by DEQ and will be submitted shortly to EPA and the Tribes for consideration, indicating that the site is not a signficant source control concern. A final risk assessment was submitted to DEQ in November 2013 and approved by the Department. The PDC is proceeding with a feasibility study. October 2014. April 2014 feasibility study approved by DEQ. DEQ staff report outlining proposed site remedy (minor hot spot removal and capping) completed October 2014. Public notice to occur in November 2014. ROD issued by DEQ in December 2014. In recent years, a number of site buildings have been demolished with limited environmental oversight by DEQ. Sale and redevelopment of the property may be pending, and DEQ has been contacted regarding a potential PPA for site purchaser. An Upgradient Data Gap Investigation was completed for Tanner Creek Sewer contamination (May 2017). Addressing TCS contamination remains on hold as of September 2018 pending site redevelopment activity. September 2019: Prosper Portland is developing a two-part plan for addressing TCS contamination. DEQ is hopeful that at least a portion of the work can be implemented in 2019. A boom is maintained at the TCS to address any TPH releases. Site redevelopment is on hold as of this date.

NARR Comments: Union Station and its associated railyards were built with fill placed over the former Couch Lake in the 1890s. A hundred years later, Union Station was still open for passenger rail traffic, but the railroad switching yards were no longer needed. In the mid-1990s, PDC (the Portland Development Commission) acquired railyards both north and south of the Broadway Bridge (Parcel A North and Parcel B South, respectively). Parcel A North was acquired from the Portland Terminal Railroad Company. PDC signed a Letter Agreement with DEQ's Voluntary Cleanup Program (VCP) in late 1996, requesting review of a Remedial Investigation and other activities that were already taking place at the site. (The Remedial Investigation was completed in October 1996). Investigation identified elevated PAHs, lead, and arsenic in shallow and deeper soil, with concentrations in shallow soil (only) exceeding risk-based concentrations. Groundwater is not significantly impacted.

NARR Comments: Union Station - Parcel A North. Also known as Union Station, Lot 1 and Union Station, Lot 2. Located in 1N1E Section 34 BB. Lot 1 has been developed as the Oregon Statue Universit/Oregon Dept. of Agriculture - Food Innovation Center. Lot 2 to the south remains undeveloped but has a temporary clean soil cap. The site is located on the NW by NW Naito Parkway, on the south by the Union Station-Parcel B South site, on the southwest by Union Station as associated rail tracks, and on the northwest by NW Ninth Avenue. The Broadway Bridge crosses over the southern section of Lot 2.

NARR Comments: Union Station is located in Northwest Portland, adjacent to the Broadway Bridge. The Willamette River is about a block to the east. The area is a transportation hub, receiving regional and national Amtrak passenger rail traffic at the station, national bus service at the Greyhound Station (about three blocks south), and local Tri-Met bus traffic from the transit mall on 5th and 6th Avenues. High density residential housing is present within a couple of blocks to the south and west.

NARR Comments: (2/18/2003 ACV/VCP) In December 1997 the Risk Assessment and Feasibility Study were completed. After a public comment period in March 1998, the Record of Decision was finalized in August 1998. However, construction of an engineered cap and building on Lot 1 was started in May 1998. Lot 1 was sold to Oregon State University (OSU) and redeveloped as the Union Station Agricultural Marketing Center. The Center was completed in the spring of 1999. Construction has yet to begin on Lot 2.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [May 2014] Site investigation was begun in 1991; the majority of soil and groundwater investigation was completed in 1996 under DEQ's voluntary cleanup program. Elevated PAHs, lead, and arsenic were detected in shallow soil. Groundwater was not determined to be significantly impacted. A 1997 risk assessment identified risk to site occupants from contamination in shallow soil and so-called <quot>black layer<quot> soil present at less than 5 feet bgs. A 1997 feasibility study evaluted remedial options for shallow soil, including capping and excavation/disposal. Given the area of contamination and a lack of hot spots, soil capping and institutional controls were recommended. DEQ staff report recommended engineering and institutional controls as a site remedy consistent with the FS. Public notice of the proposed remedy was issued in 1998; no comment were received. The site remedy was memorialized in a June 1998 Record of Decision. A (final) Remedial Action Work Plan for the entire site was completed in February 1999 and approved by DEQ. Lot 1 capping was completed in 1998/1999 as part of site development. Lot 1 is now capped by the OSU Food Innovation Center and associated parking and landscaping. Cap inspections were performed from 1999 to 2009 on an annual basis. In April 2010 DEQ approved modification of the cap inspection schedule to once every five years. A conditional NFA was issued for the Food Innovation Center (Lot 1) in 2019. A cap inspection was also completed, and the next is due in 2023. The Lot 2 portion of the site owned by Madrona Park LLC (Winkler) has not been capped or developed, nor has the Prosper Portland-owned parcel. In 2019, a temporary cap was installed on a portion of the PP parcel, under a work plan approved by DEQ, to facilitate the Oregon Harbor of Hope houseless community navigation center. This does not represent a final remedy but is considered protective for temporary use. Access to the remainder of the PP parcel/lot is restricted by fencing. In 2018, planning began for development of Harbor of Hope on the southern portion of the site, which would involve short-term (~5 years) use. A draft Remedial Action Plan was submitted to DEQ in August 2018, outlining plans for installation of clean fill and hardscape in HOH use areas. The plan is currently under review. DEQ approved the plan in 2018, and construction of the temporary cap was completed in 2019. An implementation report was submitted in October 2019 and found to be acceptable. Formal cap inspections will be completed every six months.

NARR Code:	Contamination
Created By:	KDANA
Created Date:	08/03/2011
Updated By:	KDANA
Updated Date:	03/21/2012
Decode for NarcdID:	Contamination

NARR Comments: (01/31/2012 KPD/ICP) Contamination was encountered at eight separate locations along the project alignment: 1) Petroleum-contaminated soils (PCS) associated with a former manufactured gas plant were encountered beneath roadways surrounding the intersection of NW 9th Avenue and Lovejoy Street. Sampling identified diesel, heavy oil, and PAHs in the soil, and 417 ppb diesel in the groundwater (23-25 ft bgs). 2) Lead-contaminated paint was sandblasted off of the Broadway Bridge from March-August 2010. Samples of the paint chips found total lead concentrations ranging from 26,900 parts per million to 121,000 ppm. 3) An underground storage tank (UST) was identified near the NE corner of the intersection of NE Weidler Street & Victoria Avenue in April 2011. The site address was given as 51 NE Weidler Street. PCS was identified atop the tank, a sample of which found 4,630 ppm gasoline and 883 ppm diesel. 4) A 370-gallon capacity UST was discovered on the SE corner of NE 2nd & Broadway in February 2010. Sampling found up to 726 ppm gasoline in the soil. 5) A pole for the overhead catenary system (OCS) was installed on the north side of NE Broadway between MLK & Grand (at 425 NE Broadway). Sampling found 279 ppm gasoline in the excavation hole. 6) An OCS pole needed to be installed at 418 SE Grand Avenue, where a basement for the adjacent building extended beneath the sidewalk. The pole was ultimately installed through the sidewalk and through the basement. In February 2011, PCS was encountered beneath the basement floor in the excavation for the pole foundation. A soil sample from 2 feet below the floor (10 ft bgs) found 1,480 ppm diesel and 1,320 ppm heavy oil, along with low levels of PAHs. 7) PCS was encountered beneath the intersection of SE MLK Jr Blvd & Alder Street during installation of a manhole and sewer pipe. 8) The OMSI Viaduct was built to carry the

PORTLAND STREETCAR LOOP (Continued) **S110818297**

Streetcar line over existing railroad tracks, and extends from SE MLK at Harrison Street to SE Water Avenue. In September 2009, soil samples were collected from borings at the south end of the viaduct. The samples found up to 154 ppm diesel and 1,280 ppm heavy oil, along with 396 ppm lead. Soil sampling at Bent 3 (between the railroad tracks) in April 2010 found up to 672 ppm lube oil. (See ECSI #5392 for more information on the OMSI Viaduct).

NARR Comments: (01/31/2012 KPD/ICP) In addition to the contaminated areas, seven potential underground storage tanks were encountered along the project alignment but were not sampled or decommissioned: 1) A potential UST was encountered along NE Broadway between 3rd Ave & MLK Jr Blvd. The address was given as 307 NE Broadway. The UST was left in place beneath a landscape planter. 2) A potential UST was encountered on the north side of NE Weidler Street (beneath the sidewalk) west of MLK Jr Blvd in January 2010. The location was given as 76 ft west of MLK and 9 ft east of a utility pole. 3) A potential UST was encountered on the east side of NE Grand Avenue (beneath the sidewalk) south of Holladay Street in April 2010. The UST was described as being 1.5 ft west of the overhead catenary system (OCS) pole. The site address of the adjacent building was 518 NE Grand Avenue. 4) A potential UST was encountered on the east side of NE Grand Avenue (beneath the sidewalk) between Irving & Oregon Streets in April 2010. The UST was described as being 13 ft north of the OCS pole. 5) A potential UST was encountered on the SE corner of the intersection of Grand Ave & Burnside in March 2010. A Streetcar station is now located on the corner. However, a cap for the tank fill pipe is reportedly still visible in the sidewalk. 6) A potential

PORTLAND STREETCAR LOOP (Continued) **S110818297**

UST was encountered on the west side of SE Martin Luther King Jr Blvd (beneath the sidewalk) midway between Oak & Stark Streets. The tank reportedly was already filled with grout (i.e. had been decommissioned in-place). 7) A potential UST was encountered on the east side of SE Grand Avenue between Alder & Morrison Streets. The UST was described as being 35 ft south of the OCS pole.

NARR Comments: (01/31/2012 KPD/ICP) Removals were conducted at seven separate locations along the project alignment. Except as indicated, the removals were of petroleum-contaminated soil (PCS). NW 9th & Lovejoy - A total of 624.7 tons of PCS were removed from around the intersection and shipped to the Hillsboro Landfill for disposal. 51 NE Weidler St - A total of 14.32 tons of PCS were excavated from atop the UST and shipped to the Hillsboro Landfill for disposal. The soil was removed from the bottom 6-8 inches of the planter between Victoria & 1st Avenue on Weidler. The UST was not decommissioned. 228 NE Broadway - About 9 tons of PCS were excavated from around the UST and shipped to the Hillsboro Landfill for disposal. The UST was decommissioned in-place with controlled-density fill (CDF). 425 NE Broadway - About 12.5 tons of PCS were removed from an OCS pole excavation and disposed of at the Hillsboro Landfill. 418 SE Grand Ave - Approximately 5 cubic yards (9.1 tons) of PCS and 500 gallons of groundwater were removed from an OCS pole excavation and disposed of at the Hillsboro Landfill. SE MLK & Alder - Approximately 20 cubic yards of PCS were removed from beneath the intersection and disposed of at the Hillsboro Landfill. OMSI Viaduct - A total of 937.01 tons of PCS were removed as part of the viaduct construction and shipped to the Hillsboro Landfill for disposal. Contaminated soils were excavated from Bent 2 (200.51 tons), Bent 3 (213.59 tons), and Bent 4 (17.19 tons), as well as for construction of the south ramp (505.72 tons). No contaminated soil was excavated from Bent 1. (See ECSI #5392 for more information on the OMSI Viaduct).

NARR Comments: (6/17/93 KPD) Dreyfus hired PEMCO in June 1992 to perform a Level 1 Site Assessment at its facility. PEMCO found petroleum contamination in a pit at the facility's maintenance shop. The pit (16 x 3.5 x 5 ft.) had a gravel bottom and was used for changing oil. 15 - 20 cubic yards of contaminated soil was removed with a backhoe in October 1992. More could not be reached because of the confined spaces. Two confirmation samples found 62 and 2700 ppm TPH. PEMCO recommended

LOUIS DREYFUS FACILITY (Continued) **S111761895**

sealing the pit with concrete and leaving the remaining contamination in place. The remaining contamination could be removed if and when the maintenance shop were ever torn down. In addition, two underground storage tanks containing gasoline and diesel were removed from the site at the end of 1991. See LUST Log 26-92-0001 for more information on the tank removal.

NARR Comments: (3/28/94 KPD/SAS) The potential for groundwater contamination should be further assessed. Site Assessment recommends that the owner/operator enter the Voluntary Cleanup program, or else perform its own groundwater investigation and report the results back to DEQ. The site is a low priority for further action.

NARR Comments: (12/16/2002 DJH/VCP) Union Station and its associated railyards were built when the former Couch Lake was filled in in the 1890s. A hundred years later, Union Station was still open for passenger rail traffic, but the railroad switching yards were no longer needed. In the mid-1990s, the Portland Development Commission (PDC) acquired the railyards, both north and south of the Broadway Bridge (Parcel A North and Parcel B South, respectively). The PDC signed a Letter Agreement with DEQ's Voluntary Cleanup Program (VCP) in July 1996, requesting oversight of investigation activities that were taking place at the site. A number of phases of soil and groundwater investigation work were subsequently completed at the site in 1996 and 1997 under VCP oversight. The investigations showed shallow soils to be contaminated with petroleum hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), lead and arsenic. Deeper soils were found to contain elevated levels of PAHs. A separate area of crude oil contamination was found in soils in the southern portion of the site (the B-11 Area). Groundwater was determined not to be significantly impacted. See ECSI #1962 for information on Parcel A North.

NARR Comments: Union Station is located in Northwest Portland, adjacent to the Broadway Bridge. The Willamette River is two blocks to the east. The site is a transportation hub, receiving regional and national Amtrak passenger rail traffic at the station, national bus service at the Greyhound Station (one block south), and local Tri-Met bus traffic from the transit mall on 5th and 6th Avenues. The site has been partially redeveloped for high-density housing.

Updated Date: 03/11/2011
Decode for NarcdID: Remedial Action
NARR Comments: (12/16/2002 DJH/VCP) A Remedial Investigation and Feasibility Study (RI/FS) for site soils was completed in September 1996. (No further action was necessary for the groundwater contamination). After a public comment period in October, the Record of Decision was signed in November 1996. Contaminated soil in the B-11 Area was to be landfilled, but in January 1997 DEQ decided to change the remedy to allow for thermal treatment of some of the excavated soil. After a public comment period in February 1997, the change was approved in March 1997. Excavation and treatment of contaminated soil in the B-11 Area was completed in May 1997. Capping of the northernmost portion of the site (Lot 3) was started shortly thereafter. The cap was completed in the spring of 1998, concurrent with the development of multi-family residential housing on Lot 3 (The Yards at Union Station). Capping and redevelopment of Lot 4 (Phase II of The Yards) started in September 1998 and was largely completed in December 1999. Capping of two undeveloped portions of Lot 4 is cpmplete, and a final Closure Report for the lot was accepted by DEQ. Cap inspection reports have been periodically submitted for both Lots 3 and 4. After July 2010 cap inspection, DEQ determined that cap inspection and reporting for Lots 3 and 4 can change to a five-year schedule pending the receipt of any new site information, with next reporting due in late 2015. Capping and redevelopment of Lot 5 has not been scheduled.

Decode for NarcdID: Institutional Control
NARR Comments: Lots 3 and 4 of the subject site are capped with a combination of soil (2') and harscape (buildings, paving, etc.). After July 2010 cap inspection, requirements for capping have been decreased by DEQ to once every five years. Next inspection is to be completed in July 2015, with reporting to DEQ with 45 days. Engineering and institutional controls will be recorded with the property deed for Lot 5 once capping is completed as part of site development.

Updated By:	KDANA
Updated Date:	03/28/2019
Decode for NarcdID:	Contamination

NARR Comments: (03/15/2019 KPD/SRP) Contamination was first noted at the Hoyt Street Yard in the 1970s, when petroleum product was observed at Tanner Creek's outfall to the Willamette River. A Subsurface Investigation of the train yard was conducted in 1987. By the end of 1990 a total of 78 test pits, 48 soil borings, and 28 monitoring wells had been installed at the site, and 16 Areas of Concern had been identified on and adjacent to the site. Eight additional monitoring wells were installed in 1992. DEQ added the <quot>Hoyt Street Train Yard<quot> to the Confirmed Release List in 1991. DEQ signed an Order on Consent with Burlington Northern Railroad (BNR) in August 1995. BNR agreed to conduct a Remedial Investigation and Feasibility Study for the site, along with Human Health and Environmental Risk Assessments and any Interim Removal Measures that might be necessary. DEQ approved a work plan for the RI/FS in December 1995. Initial soil sampling was

HOYT STREET RAILYARD (FORMER) (Continued) **S111429244**

completed that same month, and quarterly groundwater monitoring was conducted in 1996. The most-contaminated areas were the Historic Fueling Area (1911 to mid-1940s) with up to 29,000 ppm TPH in the soil and 18.6 ppb total dissolved PAHs in the groundwater, and the Second Fueling Area (mid-1940s to 1998) with up to 44,000 ppm TPH in the soil and free-product on the groundwater. A former Battery Service Area had over 400 ppm lead in the soil. The Remedial Investigation report and groundwater beneficial use determination were completed and approved in May 1997. The Risk Assessment was completed in April 1998, and the Feasibility Study was completed in September 1999. DEQ completed a Record of Decision (ROD) in December 2000. At the time the ROD was completed, soil and/or groundwater samples had been collected from 203 test pits, 89 borings, and 42 monitoring wells at the site.

Decode for NarcdID: General Site Description
NARR Comments: In the early 1990s the project was referred to as the Hoyt Street Yard and was divided into two parcels, separated by the Lovejoy Viaduct. Parcel 1, south of Lovejoy, consisted of eight blocks bounded by Lovejoy, Hoyt, 10th & 12th and two blocks bounded by Lovejoy, Johnson, 9th & 10th. Parcel 2, north of Lovejoy, extended north between 9th & 12th to Front (Naito) and included additional blocks bounded by Front, Quimby, 12th & 13th and Front, Raleigh, 13th & 14th. Soil samples were collected from seven test pits in Parcel 1 in November 1990. Four additional test pits and six groundwater monitoring wells were installed in March-April 1993. The soil samples were analyzed for petroleum hydrocarbons and lead. Only a handful of elevated lead concentrations were detected (up to 270 ppm total lead and 31 ug/L leachable lead). Groundwater samples were analyzed for PAHs; none were detected. The investigations covered the eight blocks bounded by Lovejoy, Hoyt, 10th & 12th. In early 1994 Burlington Northern Railroad (BNR) entered into negotiations with DEQ to investigate and clean up the Hoyt Street Yard. DEQ signed an Order on Consent with BNR in August 1995. The Consent Order covered all of Parcel 2 and two blocks from Parcel 1 (bounded by Lovejoy, Johnson, 9th & 10th) that were impacted by Areas of Concern. The new project site (ECSI #1080) was named <quot>Hoyt Street Railyard<quot>. In October 1994, during the negotiations with BNR, Parcel 1 was transferred to DEQ's Site Assessment program under a different ECSI file number (#1624). In July 1996, after the Consent Order had been signed, DEQ determined that the remaining eight blocks of Parcel 1 were insufficiently contaminated to require further investigation or cleanup. The ECSI file number (1624) was reassigned to the block bounded by Kearney, Johnson, 9th & 10th. Hoyt Street Properties subsequently numbered most of the new city blocks that would be created from the Hoyt Street Yard. Parcel 2 was divided into blocks numbered 8 to 30. Six of the original Parcel 1 blocks (bounded by Lovejoy, Irving, 10th & 12th) were numbered 2 to 7. For undetermined reasons, four of the Parcel 1 blocks were not numbered, and there is no Block 1.

NARR Comments: The 26-acre Hoyt Street Railyard site was purchased in 1906 by the Portland & Seattle Railway Company (later known as the Spokane, Portland & Seattle Railway Company). SP&S was acquired by Burlington Northern Railroad in 1970. BNR transferred ownership of the site to a property management subsidiary, Glacier Park Company, in 1988 and continued to lease the site through the end of 1998. Glacier Park sold the site to Walker Road Partners in 1990. Prendergast & Associates served as the managing agent for Walker Road until 1994, when Walker Road sold the site to Hoyt Street Properties LLC. As

HOYT STREET RAILYARD (FORMER) (Continued) **S111429244**

redevelopment of the site has progressed, HSP has gradually transferred ownership of individual blocks to developers and homeowner associations.

NARR Comments: The site was filled in with 10-20 feet of material in the 1880s. The fill was a mixture of sands, silts, clays and industrial debris (sawdust, bricks, slag, cinders, glass, etc.). Beneath the fill was 5-10 feet of sandy clay and/or silty clay (the original wetland soils) followed by layers of Pleistocene sand and gravel to about 90 ft bgs. Tanner Creek originally flowed across the site to the Willamette River. The creek was initially diverted into a brick-lined sewer beneath NW 9th Avenue. That line was sealed off in 1916 and replaced by a 6.5-10.0 foot diameter line beneath NW 10th Avenue. The 10th Avenue line was later supplemented by a 27-inch branch line beneath 9th Avenue. The groundwater flow direction at the Hoyt Street Railyard was originally to the north-northeast, toward the Willamette River. Since 2007, however, monitoring wells in the vicinity of Fields Park have shown groundwater flowing southeast toward the Tanner Creek line. The change is likely due to development in the area, including the construction and dewatering of subsurface garages and the installation of impervious surfaces.

Decode for NarcdID: Remedial Action
NARR Comments: (03/15/2019 KPD/SRP) Recovery of free-product petroleum atop the groundwater began in 1975 with the installation of four product recovery wells along NW 9th Avenue. The wells were pumped regularly until 1980. Operation of the system gradually decreased through the 1980s and two of the wells were abandoned. In 1992 two new recovery wells were installed along 9th Avenue. Treated groundwater was discharged to the Willamette River via the Tanner Creek sewer line under an NPDES permit. The product recovery system was incorporated into the August 1995 Order on Consent as an interim removal measure. Two additional recovery wells were added in 1996. The system recovered about 2,900 gallons of floating product from 1995 to 2001. In the fall of 2001 approximately 18,800 tons of impacted soils were excavated from the former fueling area and removed from the site, along with an additional 1,900 gallons of floating product. The recovery system was decommissioned in 2002. Two 15,000-gallon diesel USTs were decommissioned by removal from the site in 1988. (See UST Facility ID #3308). A 1,800-gallon lube oil UST was removed from the site in August 1992 along with soils contaminated with up to 9,000 ppm diesel. (See LUST file #26-92-0234). Hoyt Street Properties (HSP) began redevelopment of the railyard in 1998. A Consent Decree between DEQ, HSP, and Burlington Northern Santa Fe (BNSF) Railway to

HOYT STREET RAILYARD (FORMER) (Continued) **S111429244**

implement the December 2000 ROD was negotiated in 2001 and recorded in February 2002. HSP agreed to remediate the soils at the site. The remedial action consisted of the excavation and off-site disposal of contaminated soils; the capping of residual soil contamination with clean soil, buildings or pavement; and the filing of Licenses and Declarations of Restrictions to protect and maintain the caps. BNSF assumed responsibility for the groundwater contamination. Six long-term monitoring wells were installed around the [future] Fields Neighborhood Park in August 2006. The wells were sampled quarterly for PAHs in 2007, semi-annually in 2008 and 2009, and annually thereafter. By June 2002, when an RD/RA Work Plan was finished, five interim remedial actions had been completed. Removal of a PAH Hot Spot was completed by August 2000. Soil remediation in Phases 1 & 2 (covering Blocks 8-13) was completed by February 2001. All USTs were removed from the site by April 2001. Lead-impacted soils were removed from a former railyard battery dump at 10th & Overton by February 2002, and LNAPL-impacted soils and groundwater were removed from Block 16 by April 2002. In October 2002 DEQ signed the first Certification of Completion, covering Blocks 8, 10, 11 & 12. Phases 3 & 4 of the cleanup (covering Blocks 14-22 and Block 25) were conducted from May 2003 through February 2004. Asbestos-containing insulation was removed from pipes within a steam tunnel system beneath parts of Blocks 15, 18 & 19 in August 2003. DEQ signed a second Certification of Completion in December 2004, covering Blocks 13, 16, 18 & 21. Phase 5 of the cleanup (covering Blocks 23 & 24 and Blocks 26-30) was completed in February 2006. A third Certification of Completion, covering Blocks 9, 14 & 19, was signed in April 2008. In January 2011 DEQ issued an Explanation of Significant Difference (ESD) to the 2000 ROD, decreasing the required cap thickness in park areas from 3 ft to 2 ft and the required cap thickness in play areas from 5 ft to 3 ft. The changes were based on experience with actual park uses, and were applied to The Fields Neighborhood Park. A Certification of Completion for The Fields (Blocks 18, 21, 22 & 25) was signed in June 2014. A second ESD, extending the anticipated project completion deadline from 2015 to 2025, was issued in November 2015. A fifth Certification of Completion, covering Blocks 15 & 17, was signed in September 2016. A Certification of Completion for Block 27 was signed in April 2018.

NARR Comments: The Hoyt Street Railyard is being redeveloped into a high-density urban residential neighborhood. Clean soil utility corridors, 50 feet wide and 5 feet deep, have been established beneath the streets. The portions of each developed city block not capped by buildings or pavement are capped by at least 2-3 feet of clean soils. Institutional controls (referred to as a <quot>License and Declaration of Restrictions<quot>) are being recorded on each city block prior to sale and redevelopment that require long-term maintenance of the cap. Fencing and/or other site security measures are to be installed and maintained for all areas where a cap is not yet constructed to restrict public access.

Decode for NarcdID: Site History
NARR Comments: The area was originally marshlands associated with Tanner Creek and the Willamette River. In the 1880s the area was filled in with 10-20 ft of soil and industrial debris (sawdust, bricks, slag, cinders, glass, etc.). Early industries included a sawmill and fueling facility at the north end of the site and a woolen mill. Tanner Creek was diverted into a subsurface pipe and incorporated into Portland's combined stormwater and sanitary sewer system. The Hoyt Street Yard was constructed in the first decade of the 20th century and operated until the end of 1998. Fueling and maintenance activities were conducted in the northern portion of the railyard until the mid-1940s, when they were relocated to the east-central portion of the site. Recovery of free-product petroleum from the groundwater began in the second (relocated) fueling area in 1975. Hoyt Street Properties (HSP) acquired the railyard in 1994 and leased it back to the railroad through the end of 1998. In September 1997 HSP signed a Development Agreement with the City of Portland to redevelop the railyard as a high-density, mixed-use neighborhood, with parks along the Tanner Creek alignment and a Streetcar line running through the area. The development would be part of the city's River District, which extended north of Burnside Street between Interstate 405 on the west and north and the Willamette River on the east. HSP would begin development of the blocks south of Lovejoy Street by the end of the 1998 and the blocks north of Lovejoy starting in 1999, working from south to north. Around the year 2000, the portion of the River District between I-405 and NW Broadway became known as the Pearl District.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The Hoyt Street Yard was a 40-acre railroad switching and fueling yard that operated on the north side of Portland's downtown core from at least 1897 to 1998. DEQ's Hoyt Street Railyard site is a 26-acre portion of the original yard, generally extending north from NW Lovejoy Street between 9th & 12th Avenues to Quimby Street, then following the south side of Naito Parkway to Interstate 405 and the Fremont Bridge. Soils and groundwater on the Hoyt Street Railyard site were contaminated with petroleum and petroleum constituents. (The remaining portion of the Hoyt Street Yard was largely uncontaminated). Hoyt Street Properties purchased the railyard for redevelopment in 1994, and Burlington Northern Railroad entered into negotiations with DEQ to investigate and clean up the yard at the same time. A Remedial Investigation report was completed in 1997, followed by a Risk Assessment in 1998 and a Feasibility Study in 1999. DEQ completed a Record of Decision for the site in December 2000. Hoyt Street Properties generally assumed responsibility for the

HOYT STREET RAILYARD (FORMER) (Continued) **S111429244**

contaminated soils, and Burlington Northern assumed responsibility for the groundwater. (Cleanup of the groundwater had begun back in 1975). The most-contaminated soils were largely removed by 2002. Residual contaminated soils in the area are being capped by buildings and pavement, and by 2-3 feet of clean soils in parks and other vegetated areas. All portions of the former Hoyt Street Yard south of Quimby Street have been redeveloped into a high-density urban residential neighborhood. Three-and-a-half city blocks north of Quimby and west of 11th Avenue remain to be developed. Development is expected to be completed by 2025.

Decode for NarcdID: General Site Description
NARR Comments: The Fields site is governed by the Record of Decision (ROD) for the Hoyt Street Railyard (HSRY) Property, dated December 15, 2000. The site consists of blocks 18, 21, 22, and 25 that are located on the northeast section of the HSRY site north of Overton Street and east of NW 11th Avenue. Remediation of groundwater at the site is being performed under a Consent Order and Consent Decree between DEQ and Burlington Northern Santa Fe Railway (BNSF) and is not associated with the remedial action performed at The Fields. The remedial action for soil included : excavation and treatment and/or landfill disposal of hot spot soils; excavation, stabilization (as needed), and landfill disposal of soil containing lead and classified as hazardous waste; excavation in utility corridors where concentrations exceed construction worker RBCs in the upper 5 feet of soil; capping the site with either hardscape (pavement, buildings) or clean soil to a depth of 2 feet in the park area and 3 feet in the childrens' play area; developing a park user RBC for the greater park area. An Easement and Equitable Servitude (EES) was filed with Multnomah County in November, 2013. The EES restricts groundwater use, the construction of habitable structures on the property, and disturbance of the soil/hardscape site cap. The remedial action was conducted as part of park develpoment and was completed in May, 2013. DEQ issued a conditional No Further Action determination and Partial Certificate of Completion for the site in June, 2014. Annual cap inspections have been performed since 2014. The current cap inspection is available on WebDocs below.

NARR Comments: From 1911 to 1994, the site was owned by BNSF and operated as a fueling and maintenance facility. Underground and above-ground petroleum storage tanks were present until the rail yard was abandoned and dismantled in the late 1990s. Concentrations of petroleum, polycyclic and aromatic hydrocarbons, and metals were found in soil and groundwater during previous site investigation. Groundwater remediation is being conducted as part of the Hoyt Street Rail Yard site investigation and under a Consent Order and Consent Decree between DEQ and BNSF.

Decode for NarcdID: Remedial Action
NARR Comments: A Remedial Action Work Plan (RAP) and Contaminated Media Management Plan (CMMP) were submitted by AMEC, on behalf of the City of Portland in April 2013, and subsequently approved by DEQ. In addition to presenting the plan for implementing the remedial actions during development of the park, the RAP also included a Soil Data Summary Report that compared the site cap PAH soil concentrations to the site-specific RBCs approved in the ESD. This information was used to determine the design of the protective cap elements at the park, described below. In July 2013, a Remedial Action Closure Report was submitted by AMEC that discussed the remedial actions completed at the site between April 2012 and December 2013. The Closure Report also included a Site Inspection and Maintenance Plan, Worker Notification and Protection Plan, and Soil and Groundwater Management Plan to address long-term management requirements. Hot Spot Removal In April 2012, 201 tons of soil was excavated from soil sample location 18-11, where benzo(a)pyrene was detected above the site-specific RBC of 0.21 mg/kg at 0.837 mg/kg. Greater Park Area The park development plan required mass grading of the site. Concentrations of PAHs in existing cap soil for the Greater Park Area were at or below the site-specific RBCs for park users. The existing cap soil in this area did not require remediation and was designated as Managed Soil . Managed Soil was reused within the Greater Park Area to construct a minimum of a two-foot thick cap over remaining contaminated soil. Contaminated soil beneath the demarcation fabric was designated as Special Handling Soil . Special Handling Soil was reused at the site by placing it below the restored demarcation fabric, or under hardscape. Construction of utility trenches, rain gardens, and tree plantings required replacement of demarcation fabric over Special Handling Soil and/or over-excavation. Over-excavation for tree plantings was completed to a minimum of 24 inches around the rootball and was backfilled with clean fill or Managed Soil. Children s Area Concentrations of PAHs were detected

HOYT ST. RAIL YARD - THE FIELDS (Continued) **S110764046**

above the site-specific RBCs in the Children s Area soil. Therefore, remedial action cap elements consisted of a combination of sand, blended compost, woodchips, and decomposed granite. The cap elements were a minimum of three-feet thick over the existing demarcation fabric and remaining contaminated soil. Easement and Equitable Servitude In November 2013, an EES was filed with the Multnomah County Circuit Court that restricted the use of site groundwater, prohibited the construction of habitable structures and required protection and maintenance of the soil cap. In addition, the EES required adherence to the Site Inspection and Maintenance Plan, Worker Notification Plan, and Soil and Groundwater Management Plan, all of which were included in the Remedial Action Work Plan. DEQ issued a partial certificate of completion and conditional No Further Action determination for the site in May, 2014, following a 30-day public comment period where no comments were received. The annual cap inspection was performed in October, 2014 with no maintenance or repairs noted. The inspection report is available on WebDocs for review and will be replaced with the 2015 cap inspection report when received.

NARR Comments: Since 1911 the HSRY site operated as a railroad service yard. Fueling and maintenance activities were performed in the northern and central portions of the site. Underground and above-ground storage tanks for petroleum fuels and service buildings (including a locomotive roundhouse equipped with a turntable) were utilized in this process. Burlington Northern Santa Fe Railroad (BNSF) owned and operated the site from the early 1900s until 1988. The site was sold and successively leased back to BNSF until it was purchased by Hoyt Street Properties, LLC (HSP) in 1998. The railyard was abandoned and dismantled in 2008, and many of the blocks in the site were developed as condominiums and commercial businesses. The City of Portland Bureau of Parks and Recreation purchased the lots associated with The Fields site in 2010, and assumed responsibility for completing the remedial actions required in the Consent Decree. Remedial actions were conducted during park development, which was completed in May, 2013.

NARR Comments: [Oct. 2014] The Fields Park opened to the public on May 6, 2013. A minimum of a two-foot protective cap consisting of hardscape or soil meeting site-specific park user risk-based concentrations is present at the site. Contaminated Special Handling soil containing petroleum, PAHs, and metals remain on the property beneath demarcation fabric. An Easement and Equitable Servitude, or E&ES (posted below) was filed with Multnomah County in November 2013. It requires maintenance, inspection, and protection of the site cap, notifications to and protections of site workers, and restrictions on groundwater use and construction of habitable structures at the site. DEQ issued a conditional No Further Action determination in June 2014, indicating that as long as controls in the E&ES remain in place, the park is safe for public use. [February, 2019] Cap inspections have been conducted annually since 2014 are available for review at DEQ's NWR office. The current cap inspection is available on WebDocs below.

Site Comment: Installation of a two-foot soil cap with chemical concentrations less than or equal to site-specific park user RBCs in all landscape soil areas and a three-foot soil cap with chemical concentrations less than or equal to urban residential child RBCs in playground structure areas. In both areas, an underlying demarcation layer is required between contaminated and capping soil. A hardscape cap consisting of buildings or pavement in lieu of a soil cap is acceptable. Cap inspection performed on 10/9/14 by City of Portland BES staff. o concerns noted, cap is intact with no maintenance work performed. Next inspection report due October 2015.

HOYT ST. RAIL YARD - THE FIELDS (Continued) **S110764046**

Control Description: Cap, non-engineered
FK Type Code: 2
Group Code: SB
Group Description: Surface Barriers
Type Code: E
Type Description: Engineering
Comments: Installation of a two-foot soil cap with chemical concentrations less than or equal to site-specific park user RBCs in all landscape soil areas and a three-foot soil cap with chemical concentrations less than or equal to urban residential child RBCs in playground structure areas. In both areas, an underlying demarcation layer is required between contaminated and capping soil. A hardscape cap consisting of buildings or pavement in lieu of a soil cap is acceptable. Cap inspection performed on 10/9/14 by City of Portland BES staff. o concerns noted, cap is intact with no maintenance work performed. Next inspection report due October 2015.

NARR Comments: Two site investigations were completed in 2018, and included sub-slab vapor, indoor air, and soil sampling. None of the sub-slab vapor samples concentrations were above DEQ's RBC for occupational use, but one was above the RBC for urban residential. PCE and TCE are elevated

FIVE STAR CLEANERS BROADWAY (Continued) **S125154557**

in indoor air above RBCs. TCE levels in soil gas are relatively low compared to PCE, yet TCE is higher than PCE in indoor air. This suggests that TCE is being used as a spotting agent. vapor. They should be similar if vapor intrusion is occurring.

Decode for NarcdID: Contamination
NARR Comments: (03/27/2019 KPD/VCP) The site was initially investigated as part of the Hoyt Street Railyard project (ECSI #1080). Soil samples were collected from six test pits on and adjacent to the site in October 1998, finding up to 350 ppm lead. One soil sample from the center of the block showed 450 ppm diesel and relatively high concentrations of PAHs. The site was re-investigated in September 2016 just prior to development. Three soil samples were collected from each of 14 borings and analyzed for diesel, oil, metals, and PAHs. Diesel (up to 1,180 ppm), oil (up to 1,320 ppm), arsenic (27.6 ppm), and lead (5,240 ppm) were detected in the samples, along with PAHs. Methane samples were collected from wood debris (encountered in about half of the borings). Methane concentrations ranged up to 20%.

Decode for NarcdID: Site History
NARR Comments: The area around the site was originally marshlands associated with Tanner Creek and the Willamette River. The area was filled in with soil and industrial debris in the 1880s. The Hoyt Street Railyard was established by 1911 and was operated by Burlington Northern Railroad and its predecessors. In 1994 the railyard was sold to Hoyt Street Properties for redevelopment. Hoyt Street leased the railyard to Burlington Northern from 1994 through 1998, after which rail activity ceased. In August 1995 Burlington Northern signed an Order on Consent with DEQ to investigate and clean up environmental contamination at the railyard. Burlington Northern completed a Remedial Investigation in October 1996, a Risk Assessment in February 1998, and a Feasibility Study in July 1999. DEQ issued a Record of Decision for the railyard in December 2000.

Site Comment: A network of four-inch-diameter perforated pipes were placed within a six-inch gravel blanket below the building foundation and wrapped with a filter sock. A blower sized for three air exchanges per hour was connected to five vent risers extending to the 6th floor roof level. The system is intended to operate continuously, and alarms will sound in the event of system failure. Six sub-slab monitoring probes were installed around the edges of the building.

Group Sequence #: 6
Control Code: SVA
Control Description: Soil venting, active
FK Type Code: 2
Group Code: LTC
Group Description: Long-Term Controls
Type Code: E
Type Description: Engineering
Comments: A network of four-inch-diameter perforated pipes were placed within a six-inch gravel blanket below the building foundation and wrapped with a filter sock. A blower sized for three air exchanges per hour was connected to five vent risers extending to the 6th floor roof level. The system is intended to operate continuously, and alarms will sound in the event of system failure. Six sub-slab monitoring probes were installed around the edges of the building.

NARR Comments:	A Phase 1 Environmental Site Assessment was completed in April 1999,

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

and the Portland Development Commission (PDC) entered the site into DEQ's Independent Cleanup program in July 1999. The site was transferred to the Voluntary Cleanup program a year later at the PDC's request. Field work for a Remedial Investigation was conducted from October 1999 to June 2002, and included the collection of soil and/or groundwater samples from 123 borings. Fourteen of the borings were completed as monitoring wells. RI reports for soils and groundwater were completed in July 2002 and December 2002, respectively. Hot-spot levels of PAHs were identified in near-surface soils in the southwest corner of the site (northeast of the intersection of 9th & Lovejoy), along with free-product and dissolved-phase contamination in the groundwater to a depth of 70 feet bgs. The worst of the contamination appears to have been associated with a former Pintsch manufactured gas plant that operated on the southeast corner of 9th & Lovejoy from the late 1800s to the 1920s. Contamination associated with railyard operations (petroleum, metals, and PAHs) was present in near-surface soils across much of the rest of the site.

Decode for NarcdID: General Site Description
NARR Comments: The demolition of the former Lovejoy Aqueduct and construction of the new Lovejoy Ramp was completed in 1999. The utilities and roads to service the new development were built in 2003. The first phase of building construction, which included the Station Place Tower (Lot 1), parking garage (Lot 3), and surface parking beneath the Lovejoy Ramp, was completed in 2004. Construction of the Ziba Headquarters building on Lot 2 was completed in 2009. Conditional NFAs have been issued for all of these lots within the subject site. Development on Lot 4 is slated to begin in lated 2012.

Decode for NarcdID: Project Issues Summary
NARR Comments: Site work initiated by Portland Development Commission (PDC) as independent cleanup action (ICP) project with limited DEQ oversight in 1999. DEQ review of Phase I conceptual work plan completed 10/99, and feedback to PDC present in same month. Site investigation subsequently completed in Oct. and Nov. 1999. Based on results and perceived site complexity, site moved to standard VCP oversight in 2000. A number of additional phase of soil and groundwater site investigation work completed in 2000 to 2002. Soil Remedial Investigation (RI) completed in July 2002, and Groundwater RI including comprehensive on-site risk assessment completed in December 2002. On-site Feasibility Study completed in March 2003. Public notice and comment on proposed site remedy (hot spot removal, engineering and institutional controls) completed in April 2003, and Record of Decision issued on May 9, 2003. Remedial Action Work Plan for remedy implementation completed in June 2003. In late June, remedy implementation began at the site in conjunction with site development work. First phase of work consisted of capping of Lot 7, followed by development of Lots 1 and 3. Development on all three lots is now complete, as is additional off-site assessment to evalute

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

impacts from remaining shallow groundwater contamination to utilities below NW 9th Avenue. While some impacts were observed, they attenuated to non-detectable levels downgradient of the site (within the Tanner Creek Sewer). A conditional NFA was issued for Lot 1 in February 2006. A Closure Report for Lot 8 (earthen fill portion of the Lovejoy Ramp) was submitted in February 2007 and accepted by DEQ. NFAs were issued for Lots 3 and 7 on May 5, 2008, and development of Lot 2 is in progress with nearly all capping activity complete. Development and attendant capping on Lots 4 and 5 has not yet begun. Five years of post-ROD groundwater sampling has been completed, and DEQ is satisfied that while MGP-related contamination extends downgradient of the site, it does not reach the Willamette River (nor is it expected to do so given the age of the release). A Revised Final Annual Groundwater Monitoring Report - 2008 was accepted by DEQ in January 2009. No additional site groundwater monitoring is expected to be needed. Lot 2 Closure approved by DEQ in 2010. Subsequent cutting and repair of Ziba building vapor barrier approved by DEQ to facilitate building improvements, with last work completed in 2011. Following recording of a site easement, DEQ issued a condition NFA letter for the lot on October 18, 2012.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site generally consist of miscellaneous fill (including bricks, wood, and slag) underlain by dredge sand to depths up to 25 feet below ground surface. Sandy silts (alluvial deposits) and gravels (the Troutdale Gravel Aquifer) underlie the fill. Groundwater is typically encountered at 10 feet bgs and extends up to 100 feet bgs. Shallow groundwater (10-20 ft bgs) in the western part of the site flows west (toward the abandoned Tanner Creek storm sewer line beneath 9th Avenue). Shallow groundwater on the eastern part of the site, along with deeper groundwater, flows toward the Willamette River, 800 feet to the northeast. As of 2018, the site has been completely capped by development. A Level 1 (Scoping) Ecological Risk Assessment, completed in September 2001, identified no ecological habitats or terrestrial receptors at the site. The nearest sensitive environment is the Willamette River, home to two threatened species (Chinook salmon and Steelhead).

Updated Date: 02/07/2019
Decode for NarcdID: Remedial Action
NARR Comments: In January 2001, 105 cubic yards of near-surface soils with hot-spot levels of PAH contamination were removed from the southwest corner of the site, followed by an additional 677 cubic yards in November and December 2002. The hot spot levels of manufactured gas plant wastes could not be fully removed to the south and west without undermining the Lovejoy Ramp and sidewalk along 9th Avenue, respectively. A proposed on-site remedy was submitted for 30-day public comment in April 2003; no comment was received. The remedy was memorialized in a DEQ Record of Decision on May 9, 2003. The selected on-site remedial action consists of: 1) removal of all soil hot spots; 2) capping of all site lots; 3) vapor mitigation measures on Lots 1 and 2; 4) monitoring of site groundwater; and 5) institutional controls. A Remedial Action Work Plan was completed in June 2003, and remedy implementation begun thereafter in conjunction with site development. 2003 site development includes construction of a surface parking lot on Lot 7, 14-story senior high-rise on Lot 1, and multi-story parking structure on Lot 3. Off-site migration assessment was submitted in

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

February 2005 and approved by DEQ. As of October 2006, capping work at Lots 1, 3, and 7, and installation of a vapor mitigation system on Lot 1, have been completed. A conditional NFA was issued for Lot 1 in February 2006; conditional NFAs were issued for Sites 3 and 7 in May 2008. September 2009. Capping of Lot 2 has been completed, and closure reports approved by DEQ. EES for Lot 2 has been completed and DEQ is awaiting a recorded document to issue an NFA for the lot. Conditional NFA subsequently issued for Lot 2. April 2013. Development and capping of Lot 4 is in progress. Development consists of construction of a hotel (Pearl Mariott) on Lot 4, with capping completed concurrently. work is being overseen by DEQ, with periodic site meetings during construction. As of April 2013, approximately 6,000 tons of contaminated soil have been removed from the site as part of site grading/utility installation/development, and transported to Hillsboro Landfill for disposal. Much of the site is now capped with concrete hotel structures. June 2014. Capping as part of site redevelopment on Lot 4 completed in 2012-2013. Closure report approved by DEQ in April 2014. NFA issued on June 27, 2104.

Updated Date: 03/04/2019
Decode for NarcdID: Health Threats
NARR Comments: Residual soil and groundwater contamination remains at the site. However, the risk of direct contact with contaminated soils is low, as the entire site has been capped by development. Contaminated groundwater does not extend to the Willamette River, and future beneficial use of groundwater in the area is not likely. Deed restrictions recorded with each of the lots prohibit penetrating the cap or extracting groundwater for beneficial use without notifying DEQ.

NARR ID: 5753008
NARR Code: Institutional Control
Created By: DHAFLEY
Created Date: 03/11/2011
Updated By: DHAFLEY
Updated Date: 10/11/2015
Decode for NarcdID: Institutional Control
NARR Comments: Lots 1, 2, 3, and 7 of the site are currently capped with clean soil and/or hardscape (paving, buildings, etc.). Lots 1 and 2 also contain passive vapor mitigation systems below building slabs to prevent groundwater vapors from entering site buildings. Indoor air monitoring for both Lots 1 and 2 has been completed, with no significant impacts observed. Additional vapor monitoring is not required. Easements have been recorded with the relevant lot deeds identifying the nature of residual contamination, the types of engineering and institutional controls that are in place, and monitoring requirements and prohibitions on groundwater use. Yearly cap inspection and reporting to DEQ are currently required for Lots 1,2, 4 and 5. In 2011, DEQ approved of decreasing the frequency for cap inspections for Lots #3 and #7 to once every five years following the review of five years of consecutive inspections showing no notable concerns. Lots 4 and 5 at the site will ultimately be capped

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

and require controls. Lot 4 capping is scheduled to take place during construction of a hotel on the lot starting in late 2012. In August 2013 DEQ determined that ongoing inspection of (public) roadways and the earthen fill portion of the Lovejoy Ramp, located within the site, do not require ongoing inspection. Maintenance of the caps (roadways) will be performed by the City as a normal activity. October 2015. Lot 4 now developed/capped, and first annual inspection completed. Lot 3 and 7 are on five-year review schedule, with next inspection required in 2020. Inspection of Lots 1 and 2 appear to be in arrears.

Decode for NarcdID: Site History
NARR Comments: The Station Place Redevelopment site was originally part of a wetlands area associated with Couch Lake (to the southeast), Tanner Creek (to the west), and the Willamette River (to the northeast). The area was filled in with 10-20 feet of imported soils in the late 1800s, and by 1908 the area had been developed as a railyard. A parking garage for an adjacent commissary building was constructed near the southwest corner of Station Place in 1942. The Portland Development Commission (PDC) purchased the Station Place site in 1987, and removed the rail lines from all but Lot 6 in 1988. [Lot 6 was subsequently dropped from the Station Place site]. By 1990, the parking garage had been renovated into a <quot>horse barn<quot> (stables) for the Portland Mounted Police, and a corral was constructed north of the barn (along the east side of 9th Avenue). The Mounted Police vacated the site in late 2001.

Updated Date: 10/22/2019
Decode for NarcdID: Current Site Summary Statement
NARR Comments: Union Station Horse Barn (aka Station Place Redevelopment) consists of six lots located at the northeast corner of NW 9th and Lovejoy in Portland's Pearl District. Comprised of Lots 1, 2, 3, 4, 5, and 7. Assessed and remedy selected under DEQ as one site. With redevelopment, a number of site owners and developments are not present as follows. Remedy for all site lots including requirement for soil cap and prohibition on groundwater use. Lots 1 and 2 also require a soil vapor barrier. Lot 1. Conditional NFA issued. Currently occupied by a high-rise residential structure, and owned by the Housing Authority of Portland. Conditional NFA issued for this lot. Lot 2. Conditional NFA issued. Currently occupied by commercial building owned and partially-occupied by Ziba design firm. Conditional NFA issued. Lot 3. Conditional NFA issued. Current occupied by parking structure, and owned by PDC. Conditional NFA issued. Lot 4. Hotel currently being developed on site; site cap will be installed during development. The hotel (Pearl Mariott) is well underway as of spring 2013 and expected to be completed in fall or

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

winter 2013. DEQ is expected to issue an cNFA for Lot 4 in early 2014. (April 2014) Site capping has been completed, and a Remedial Action Closure Report submitted (March 2014). DEQ has prepared a closure staff report and will publish notice of a proposed conditional NFA decision starting May 1, 2014. Lot 5. Undeveloped with temporary gravel cap at this time. Owned by the Portland Development Commission. Lot 7. Conditional NFA issued. Currently occupied by paved surface parking lot. Owned by Williams and Dame. Lovejoy Ramp and roadways. The earthen fill portion of the Lovejoy Ramp, immediate east of NW 9th Avenue and south of Lot 1, is capped by roadway materials (concrete). Given that this is a permanent structure that does not contain underlying utilities, DEQ determined in August 2013 that ongoing inspection of the roadway as a <quot>cap<quot> is not necessary. The roadway will be inspected and maintained by the City of Portland as city infrastructure. DEQ further determined that since all roadways within the historic Horse Barn site are now owned by the City, and have 5 feet of clean fill beneath the roadway (as required by the City), contact with contaminated soil is unlikely to occur. Inspection and maintenance under DEQ is not necessary, but will be completed by the City of Portland as necessary as part of infrastructure maintenance. 6/27/14. Capping as part of site redevelopment on Lot 4 completed in 2012-2013. Lot is occupied by the Pearl District Marriott Residence Inn. Most of the site is capped by hardscape including the hotel foundation, terrace, and walkways, with a few small landscape areas capped by 2 feet of clean fill. Closure report approved by DEQ in April 2014. NFA issued on June 27, 2104. Lot 5 redeveloped and awaiting a NFA determination from DEQ (EES needs to be filed). Lot 3 Cap Inspection Report submitted September 2015 by PDC and approved. Next cap inspection report to be submitted to later than October 2020. Lot 7 cap inspection report submitted in October 2, 2015. Next inspection report 2020. Lot 4 cap inspection report also submitted October 2015. Next inspection report in 2016.

Last Updated Date:	10/11/2015
Site Comment:	Lots 1, 2, 3. 4 and 7 of the Horse Barn (aka Station Place Redevelopment) site have been capped with a combination of soil (2' in landscaped areas) and hardscape (approximately 1' consisting of aggregate subbase and overlying concrete or asphalt). Landscaped cap is underlain by a black geotextile fabric separating contaminated soil from clean cap. Lots 1 and 2 also have passive vapor mitigation systems consisting of subslab vapor collection systems and vapor barriers. The Lot 1 vapor barrier consists of a yellow multi-ply <quot>Rhino-Wrap<quot> barrier, while that for Lot 2 consists of a blown-on <quot>Liquid Boot<quot>. Post-construction monitoring at both Lots 1 and 2 has confirmed that residual soil and groundwater contamination below buildings on these lots is not impacting above-ground air quality, and that no additional air monitoring is necessary pending the receipt of new information. DEQ will confirm

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

that cap inspection at Lots 1, 2, 3, and 7 is up-to-date. Some reduction in the frequency of monitoring may be appropriate after the initial 5-year period of annual review is completed for individual lots. A cap inspection was completed for site roadways and the earthen fill portion of the Lovejoy Ramp in June 2013. All capping elements were in good condition. Based on the nature of these areas, DEQ will not require ongoing inspection of the ramp and City of Portland streets within the Horse Barn (aka Station Place Redevelopment) site. Cap inspection reports for Lots 4 and 7 submitted to DEQ in October 2015 and both in good condition. Lot 7 is on five-year review schedule, with next inspection scheduled for 2020. Lot 4 is in annual review through 2019.

Site Comment: The high-rise residential tower constructed over Lot 1 is underlain by a vapor mitigation system to address benzene in shallow groundwater. The system consists of a vapor barrier below the building slab, and a PVC vapor collection system connected to underground vaults. The site remedy specifies semi-annual or annual sampling for 5 years to confirm that the vapor mitigation system is effective. Monitoring has been completed. No additional air monitoring at Site 1 is necessary. A vapor barrier was likewise constructed below the Lot 2 building, and two rounds of air monitoring completed. No impacts were observed and addtional air monitoring is not necessary. Lots 1, 2, 3, and 7 all have surface caps and underlying demaracation material present in, at a minimum, where soil caps are prsent.

Type Code: E
Type Description: Engineering
Comments: The high-rise residential tower constructed over Lot 1 is underlain by a vapor mitigation system to address benzene in shallow groundwater. The system consists of a vapor barrier below the building slab, and a PVC vapor collection system connected to underground vaults. The site remedy specifies semi-annual or annual sampling for 5 years to confirm that the vapor mitigation system is effective. Monitoring has been completed. No additional air monitoring at Site 1 is necessary. A vapor barrier was likewise constructed below the Lot 2 building, and two rounds of air monitoring completed. No impacts were observed and addtional air monitoring is not necessary. Lots 1, 2, 3, and 7 all have surface caps and underlying demaracation material present in, at a minimum, where soil caps are prsent.

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

Last Updated Date: 10/11/2015
Group Sequence #: 9
Control Code: CPE
Control Description: Cap, engineered
FK Type Code: 2
Group Code: SB
Group Description: Surface Barriers
Type Code: E
Type Description: Engineering
Comments: Lots 1, 2, 3. 4 and 7 of the Horse Barn (aka Station Place Redevelopment) site have been capped with a combination of soil (2' in landscaped areas) and hardscape (approximately 1' consisting of aggregate subbase and overlying concrete or asphalt). Landscaped cap is underlain by a black geotextile fabric separating contaminated soil from clean cap. Lots 1 and 2 also have passive vapor mitigation systems consisting of subslab vapor collection systems and vapor barriers. The Lot 1 vapor barrier consists of a yellow multi-ply <quot>Rhino-Wrap<quot> barrier, while that for Lot 2 consists of a blown-on <quot>Liquid Boot<quot>. Post-construction monitoring at both Lots 1 and 2 has confirmed that residual soil and groundwater contamination below buildings on these lots is not impacting above-ground air quality, and that no additional air monitoring is necessary pending the receipt of new information. DEQ will confirm that cap inspection at Lots 1, 2, 3, and 7 is up-to-date. Some reduction in the frequency of monitoring may be appropriate after the initial 5-year period of annual review is completed for individual lots. A cap inspection was completed for site roadways and the earthen fill portion of the Lovejoy Ramp in June 2013. All capping elements were in good condition. Based on the nature of these areas, DEQ will not require ongoing inspection of the ramp and City of Portland streets within the Horse Barn (aka Station Place Redevelopment) site. Cap inspection reports for Lots 4 and 7 submitted to DEQ in October 2015 and both in good condition. Lot 7 is on five-year review schedule, with next inspection scheduled for 2020. Lot 4 is in annual review through 2019.

STATION PLACE REDEVELOPMENT (Continued) **S105614268**

Type Description: Institutional
Comments: A E&ES has been recorded with the property deed for Lots 1 and 2 outlining the cap and vapor mitigation maintenance requirements, and prohibiting use of groundwater beneath the site. EES documents for Lots 3 and 7 are likewise in place requiring cap inspection and maintenance, and prohibiting groundwater use. Not vapor barriers are necessary for Lots 3, 4, 5, and 7 (4 and 5 not yet developed as of 2011).

Comments: An EES was recorded with the property deed for Lot 1 in January 2006, restricting beneficial use of groundwater and requiring maintenance of a cap, vapor barrier, and passive vapor ventilation system. Easements were recorded with the property deeds for Lot 3 and Lot 7 in February 2008, restricting beneficial use of groundwater on each lot and requiring maintenance of their respective caps. Amendments to each EES were recorded in September 2012, reducing the frequency of cap inspections from annually to once every five years. An EES was recorded with the property deed for Lot 2 in September 2011, restricting beneficial use of groundwater and requiring maintenance of a cap, vapor barrier, and passive vapor ventilation system. An EES was recorded with the property deed for Lot 4 in May 2014, restricting beneficial use of groundwater and requiring maintenance of a cap. An EES for Lot 5 has not yet been recorded.

NARR Comments: (03/31/2017 KPD/ICP) The site was initially investigated as part of the Hoyt Street Railyard project (ECSI #1080). Soil samples were collected from four test pits at the site in October 1998 and were analyzed for diesel, oil and lead, finding up to 210 ppm diesel, 500 ppm lube oil, and 1,300 ppm lead. A site-specific investigation was conducted in May 2013 when soil samples were collected from 17 borings advanced in a grid pattern across the site. Diesel (up to 1,670 ppm), heavy oils (up to 5,830 ppm), and lead (up to 277 ppm) were detected, along with PAHs. In October 2013 composite soil samples were collected from 3-foot intervals (0-3 ft, 3-6 ft, etc) down to 12 ft bgs in each quarter of the site. Diesel (up to 599 ppm), heavy oils (up to 3,460 ppm), and lead (up to 265 ppm) were detected. PAHs were also detected, with the highest concentrations in a sample from 6-9 ft bgs. A final round of soil sampling from the limits of the building excavation in December 2014 identified high levels of heavy oils (7,310 ppm) and PAHs remaining in subsurface soils (8-18 ft bgs). Three methane monitoring probes installed at the site in August 2014 detected methane in soil gas at concentrations up to 53.8 percent by volume. Follow-up sampling in April and July 2015 (during building construction) detected almost no methane. Post-construction sampling found no methane in March 2016, but concentrations up to 40.2 percent were detected beneath the completed building in June 2016.

NARR Comments: Soils at the site generally consist of fill materials. The upper layer of fill is described as either silty sands or sandy silts with gravel and brick fragments and extends on average 8-12 feet bgs. This is underlain by a layer of wood chips and sawdust that extends to the maximum explored depth of 15 feet bgs. Groundwater was generally encountered at 10 feet bgs. The groundwater flow direction was not determined but is likely north or northeast towards the Willamette River, 450 feet from the site.

Updated Date: 04/13/2017
Decode for NarcdID: Remedial Action
NARR Comments: (03/31/2017 KPD/ICP) From November 2014 to May 2015 a total of 30,653 tons (approx. 22,860 cubic yards) of soil and debris were excavated from the site and disposed of at the Riverbend Landfill, and 225,900 gallons of stormwater and groundwater were discharged to Portland's combined sewer system under permit. Soils at the site are capped with a combination of buildings, pavement, and 2-3 feet of clean soils to prevent direct contact with residual contamination. To address the methane concerns, 16 methane sensors have been installed in the parking garage and other subsurface enclosed spaces at the site. If methane is detected in any sensor at a concentration above one percent by volume, one or more fans will activate to vent the methane and bring in fresh air. Deed restrictions recorded on the property require long-term maintenance of the soil cap and long-term operation and maintenance of the methane monitoring and mitigation system.

Decode for NarcdID: Health Threats
NARR Comments: Heavy oils and methane are contaminants of concern at the site. Residents and occupants of the site are protected from direct contact with residual contaminated soils by a cap of buildings, pavement, and/or 2-3 feet of clean soils at the site. Residents and occupants are protected from methane by a methane monitoring and mitigation system installed in the parking garage and other subsurface enclosed spaces at the site. Long-term maintenance of the soil cap is required by a License and Declaration of Restrictions recorded with the property deed. Long-term operation and maintenance of the methane monitoring and mitigation system is required by an Easement and Equitable Servitudes recorded with the property deed.

Updated Date: 03/29/2017
Decode for NarcdID: Site History
NARR Comments: As of 1889 the site was part of the Willamette Steam Mills Lumbering and Manufacturing Company facility and was being used for lumber storage. The mill was gone by 1901, and by 1911 the site had been incorporated into a rail yard (the Fremont Yards) owned and operated by the Spokane, Portland & Seattle (SP&S) Railway Company. A blacksmith shop and three garages were constructed on the southwestern portion of the site around 1940. The shop and garages were replaced by an oil house around 1960. Burlington Northern appears to have acquired SP&S around 1970. The oil house was removed in the 1980s. In 1994 the facility, now known as the Hoyt Street Railyard, was sold to Hoyt Street Properties, LLC for redevelopment. Hoyt Street leased the railyard to Burlington Northern from 1994 through 1998, after which rail activity ceased. In August 1995 Burlington Northern signed an Order on Consent with DEQ to investigate and clean up environmental contamination at the railyard. Burlington Northern completed a Remedial Investigation in October 1996, a Risk Assessment in February 1998, and a Feasibility Study in July 1999. DEQ issued a Record of Decision for the railyard in December 2000. BRIDGE Housing Corporation acquired the site in 2014. Construction of The Abigail, a 155-unit apartment complex in two six-story buildings, began in November 2014 and was completed by the end of 2015.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: The Abigail Apartments were constructed in 2015 on Block 27 of the former Hoyt Street Railyard. Soils at the site were contaminated with diesel, oil, lead and PAHs. A decomposing subsurface layer of wood chips and sawdust from a late-1800s lumber mill was also present, generating methane. Over 30,000 tons of soil and debris and 225,000 gallons of stormwater and groundwater were removed from the site during construction. Residual soil contamination at the site is capped by buildings, pavement, and/or 2-3 feet of imported clean soils. Sensors were installed in the subsurface parking garage to detect and vent any accumulations of methane.

NARR Comments: (9/29/92 RP/NWR) Diesel-contaminated soil was discovered 8/20/92 during reconstructive work on Track #5. (3/28/95 SS/NWR) Portland Terminal Railroad (PTRR) owns Track #5 but has an operating agreement with Amtrak. (9/26/95 TER/VCS) Amtrak is the Responsible Party for

UNION STATION - TRACK #5 (Continued) **1006867351**

the contamination, which appears to be due to releases during refueling of trains from 1973 until 1992 at the Track # 5 site. Most likely during that time period, no effort was made to contain diesel fuel that overflowed when filling the railroad car tanks. The Portland Development Commission (PDC) is acting as Amtrak's agent for the investigation and cleanup, and is also representing PTRR. PDC is undertaking a development project at Union Station areas adjacent to Track #5.

NARR Comments: Limited soil contamination remains in place under the tracks following the '92 removal. A determination of the potential threat posed by this soil if it is to remain in place is necessary. Quarterly groundwater monitoring is ongoing. A spill of diesel fuel occurred at the Track 5 location in February 1996 during locomotive refueling. Investigation of the spill was conducted by Cascade Earth Sciences on behalf of the spiller, Blue Flame Oil Company. Additional cleanup may be warranted. Stockpiled soils from the 1992 removal were disposed of off-site after sampling confirmed elevated TPH levels. Investigation of the soil under the stockpile will be conducted.

NARR Comments: The area of the site is relatively flat and is largely covered with grass and gravel. Surrounding land use is currently commercial and industrial, although a residential development is planned for an adjacent area. Surface water most likely drains through the gravels and soil and migrates to the east toward the Willamette River. Shallow groundwater exists at approximately 10 feet below ground surface. There are no known water supply wells in the locality of the facility.

NARR Comments: (GMW/SAS) Modified options letter sent 8/30/93. (4/25/95 SS/VCS) VCS approved Workplan & Addendum for further investigation 11/22/94. Soil borings and Geoprobe water samples collected 12/7/94 through 12/9/94. Workplan for monitoring well installation received 3/23/95 and approved 4/12/95. Monitoring wells installed 4/19/95 and 4/20/95. Report on first round of groundwater monitoring received on 6/12/95. Second Quarterly Groundwater Monitoring report received 8/25/95 and comments provided. Removal Work Plan reviewed, revised and approved 10/95. Removal Completed 10/26. Report received 12/95. Third and Fourth Quarterly monitoring completed through April 1996. A report on investigation and cleanup of a fuel spill which occurred in February 1996 at the site will be submitted to DEQ the week of July 15, 1996. DEQ proposed No Further Action (NFA) with contamination in place under the railroad tracks and a hazard notice attached to the property deed, 1/14/97. Notice of Hazard recorded with Multnomah county to identify residual contamination beneath the railroad tracks. Contaminated soil should be addressed if it becomes

NARR Comments: In 1987, the Portland Development Commission purchased approximately 17 city blocks in inner northeast Portland to make way for the Oregon Convention Center. Rose City Plating Works had been operating on one of those blocks since 1944. Investigations in 1988 found soil and groundwater contamination at the Rose City site. Soil contamination extended as much as 32 feet below the surface. Close to 1600 tons of contaminated soil and debris were removed from the site and properly disposed of. DEQ signed off on the cleanup, and construction of the convention center was completed in 1989. Rose City Plating, meanwhile, relocated its operations to 7884 SE 13th Ave., in the Sellwood district of Portland. (See ECSI #269 for more information on

NARR Comments: Soils at the site consist of a mixture of silts, sands, and gravels, generally grading from silts near the surface to gravels at depth. The water table is approximately 60 feet below the site; the groundwater flow direction appears to be to the south-southwest. The site is now completely built over/paved over.

NARR Comments: (1/31/2003 DH/VCP) Nature's Fresh Northwest, a specialty food retailer, conducted Phase I and II Environmental Site Assessments in 1995 in anticipation of purchasing the property. PCE was detected in soil surrounding one of six on-site storm water catch basins at very low levels (0.1 ppm). The catch basin was behind a dry cleaner's store (Cox's One Hour Martinizing) located in a storefront on the property. Subsequent investigations revealed low levels of PCE-contaminated groundwater (<35 ppb) at 150 feet bgs, and a second nearby catch basin that had been buried and covered with asphalt sometime before Cox's moved in in 1987. Soil surrounding the buried catch basin was impacted with PCE at concentrations up to 25,000 ppm.

Updated Date: 08/16/2005
Decode for NarcdID: Remedial Action
NARR Comments: (1/31/2003 DH/VCP) Nature's joined DEQ's Voluntary Cleanup Program in June 1996. Cox's applied to DEQ's Dry Cleaner Program in January 1997. Nature's signed a Prospective Purchaser Agreement (PPA) with DEQ in March 1997. The PPA limited Nature's liability for PCE contamination at the site, but required Nature's to spend up to $140,000 in remedial work to reduce the threat posed by PCE soil contamination at the site. Nature's purchased the site in 1998 and Cox's left the site. Nature's removed the contaminated catch basin in November 1998 and installed a soil vapor extraction (SVE) system to remove the remaining PCE contamination. Nature's also demolished and remediated the former Sevier Texaco Service Station, located on the southeast corner of the property. Nature's completed its redevelopment of the property in 2001. The SVE system, which operated starting in July 1999, was shut down in May 2002 because of diminishing vapor recovery. During operation, an estimated 178 gallons of PCE were removed. In July 2002, confirmatory sampling was performed in the CB-7 area. While PCE concentrations had decreased significantly in some area (particularly in coarse-grained soil), PCE was detected to 25,000 mg/kg in fine-grained soil around CB-7. Confirmation sampling still found PCE in the soil around the catch basin. In subsequent sampling of two source area wells, no solvents were detected. Indoor and outdoor air sampling was completed in late 2002 to assess whether the remaining contamination poses a significant threat. Low (but potentially actionable) levels of PCE vapors were detected in the Nature's building, and higher concentrations in the operating dry cleaner next door. Based on these results, DEQ determined that residual contamination in the CB-7 area should be addressed, and recommended furher action under a low priority. Because Nature's commitment to site work under a 1997 PPA has been fulfilled, the site is referred to DEQ's Dry Cleaner Program for further action. Funds for site work may become available in early 2004.

Created By: Not reported
Created Date: 12/17/2002
Updated By: DHAFLEY
Updated Date: 10/16/2003
Decode for NarcdID: Health Threats
NARR Comments: The site is a low priority for further action based on the limited potential for PCE vapors, eminating from the catchbasin #7 area, to migrate through soil and accumulate in site buildings. Indoor air sampling in 2002 by flux chamber showed PCE to be below available RBCs, with ambient air samping showing slight exceedances. The source

SHOPPING CENTER PROPERTY - NATURE'S FRESH NW (Continued) **S105754745**

of some or all of the PCE could be adjacent operating dry cleaners. Flux and air sampling in the dry cleaner building identified elevated PCE. It is unclear what portion of the detections are attributable to current activities. During October 2002 re-sampling of site wells, no chlorinated solvents were detected. The threat to groundwater uses is therefore not existent.

Decode for NarcdID: Site History
NARR Comments: The area around the site was formerly marshlands associated with Couch Lake. The area was filled in with 10-20 feet of material around 1900. The Hoyt Street Railyard was established by 1911 and operated by Burlington Northern Railroad and its predecessors. In 1994 the railyard was sold to Hoyt Street Properties, LLC for redevelopment. Hoyt Street leased the railyard to Burlington Northern from 1994 through 1998, after which rail activity ceased. In August 1995 Burlington Northern signed an Order on Consent with DEQ to investigate and clean up environmental contamination at the railyard. Burlington Northern completed a Remedial Investigation in October 1996, a Risk Assessment in February 1998, and a Feasibility Study in

HOYT STREET RAILYARD - BLOCK 29 (Continued) **S119162025**

July 1999. DEQ issued a Record of Decision for the railyard in December 2000.

Name: Not reported
Address: 800 NW 6TH AVE
City,State,Zip: PORTLAND, OR 97209-3715
Facility ID: 2012-0399
Incident Status: Archive
Material: Diesel fuel
Quantity: 60
Unit of Measure: Gallons
Release Date: 02/06/2012
Description: Approximately 60 gallons of diesel fuel was released when a tanker truck from Pioneer Oil was refueling an engine between track #5 and the main track at the terminal. Spill was the result of a failed valve gasket. Pioneer oil took responsibility. Amtrak, Union Pacific and Pioneer oil will be meeting tomorrow. Amtrak's Environmental Department coordinates the cleanup efforts (Jeffery White 510-295-7549). The road crew (on site) is 503-586-6197. The release was stopped. A lot of the diesel fuel was contained by placing buckets under the leaking hose but a 10X10 gravel contaminated area remains.

Decode for NarcdID: Contamination
NARR Comments: (03/10/2016 KPD/ICP) The site was initially investigated as part of the Hoyt Street Railyard project (ECSI #1080). Soil samples were collected from test pits at the site in October 1998 and were analyzed for diesel, oil and lead, finding up to 290 ppm oil and 300 ppm lead. Additional soil samples were collected from 12 borings advanced through the streets around the block in May 2003. Oil (up to 931 ppm) and lead (up to 3,260 ppm) were detected, along with PAHs. Ten borings were advanced on the block in January 2013, and three soil samples were collected from each boring to depths of 12 ft bgs. The 30 soil samples were analyzed for petroleum and PAHs, along with either total lead or metals and VOCs. Low levels of oil, lead and PAHs were detected. Ten additional borings were advanced to 28 ft bgs in July 2013, and three soil samples were collected from each boring from 12-28 ft bgs. All 30 soil samples were analyzed for diesel, oil, PAHs and lead. Generally low levels of contaminants were detected.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site were generally a sandy silt fill to 4 ft bgs, underlain by sand (4-24 ft bgs) and clay (24-28 ft bgs). Groundwater was encountered at about 20 ft bgs. Groundwater flows northeast toward the Willamette River, approximately 750 ft from the site. Stormwater is directed to the City of Portland's combined sewer system.

NARR Comments: (03/10/2016 KPD/ICP) Between May 2003 and February 2004, Block 17 and surrounding blocks and streets were raised several feet with imported clean fill as part of the remediation of the Hoyt Street Railyard

HOYT STREET RAILYARD - BLOCK 17 (Continued) **S115330274**

(ECSI #1080). With the exception of the pre-existing NW 12th Avenue, geotextile markers and five feet of fill were placed beneath the streets around Block 17 to provide clean utility corridors. Construction on Block 17 began in February 2014. Excavations for the building foundation and two levels of subgrade parking were conducted from February through November 2014. The excavation pit covered an area 200 ft x 200 ft and extended 17-24 ft bgs. Additional excavations for stormwater lines and vaults were conducted in May 2015. A total of 43,785 tons (29,600 cubic yards) of soils were removed from the site and shipped to the Hillsboro Landfill for disposal. Approximately 6,258 tons of clean fill (aggregate) were brought onto the site for use as backfill. All soils outside the building foundation were covered by a geotextile marker and five feet of clean fill, and capped with sidewalks or landscaping.

Decode for NarcdID: Health Threats
NARR Comments: Residual concentrations of PAHs and other soil contaminants posed potential direct contact risks to urban residents and occupants of Block 17. To address the risks, the site was capped with buildings, pavement, and/or five feet of clean soil. A License and Declaration of Restrictions requiring maintenance of the cap was recorded with the Block 17 property deed in December 2013.

Decode for NarcdID: Site History
NARR Comments: The area around the site was originally occupied by Couch Lake and surrounding marshlands. The area was filled in with 10-20 feet of material around 1900. The Hoyt Street Railyard was established by 1911 and operated by Burlington Northern Railroad and its predecessors. In 1994 the railyard was sold to Hoyt Street Properties, LLC for redevelopment. Hoyt Street leased the railyard to Burlington Northern from 1994 through 1998, after which rail activity ceased. In August 1995 Burlington Northern signed an Order on Consent with DEQ to investigate and clean up environmental contamination at the railyard. Burlington Northern completed a Remedial Investigation in October 1996, a Risk Assessment in February 1998, and a Feasibility Study in July 1999. DEQ issued a Record of Decision for the railyard in December 2000.

Updated By: KDANA
Updated Date: 07/24/2019
Decode for NarcdID: Contamination
NARR Comments: (07/24/2019 KPD/VCP) The site was initially investigated as part of the Hoyt Street Railyard project (ECSI #1080). Soil samples were collected from two test pits at the site in October 1998 and were analyzed for diesel, oil and lead, finding up to 360 ppm oil and 280 ppm lead. Four borings were advanced at the site in late December 2014 as part of an environmental assessment for the Portland Development Commission. Heavy oils and lead were detected in the northeast quarter of the site along with high concentrations of PAHs. Five additional borings were advanced at the site in May 2016 on behalf of a prospective purchaser (Innovative Housing). High

HOYT STREET RAILYARD - BLOCK 26 (SW QUARTER) (Continued) **S118673052**

concentrations of diesel and oils were detected in the northwest corner of the site, along with a high lead level at the east end of the site. Elevated concentrations of arsenic were present across the site. Soil gas monitoring for methane found elevated concentrations that decreased rapidly over time, suggesting residual pockets of methane rather than a continuous source. A total of 32 soil samples were collected from 18 borings in May and June 2017 to determine the extent of clean and contaminated soils at the site. Elevated concentrations of arsenic and lead were present in a third of the samples.

NARR Comments: Soils at the site were described as 20 feet of fill underlain by native sandy silts. The fill consisted of a mixture of clayey and sandy silts, interbedded (on the north half of the site) with layers of wood pulp and sawdust 3-6 feet thick. Groundwater was first encountered 10-19 feet bgs. The flow direction was not determined but is expected to be toward the Willamette River, about 750 feet northeast of the site.

Decode for NarcdID: Remedial Action
NARR Comments: (07/24/2019 KPD/VCP) A total of 3,906 tons of contaminated soils and wood wastes were excavated from the site in July and August 2017. The excavations extended from six to 15 feet bgs, with deeper excavations on the north half of the site to remove the wood wastes. The excavations also extended 14-15 feet bgs along the entire length of 14th Avenue and along most of Raleigh Street to replace utility lines beneath the sidewalks. The deeper excavations were subsequently backfilled with imported clean soils. A 60-mil high-density polyethylene (HDPE) vapor barrier was installed across the building foundation as an additional protective measure given the initial methane detections at the site. The Vibrant Apartments opened for

NARR Comments: As of 1889 the site was part of the larger Willamette Steam Mills Lumbering and Manufacturing Company site and was used for lumber storage. In the late 1930s the site was occupied by Willis E. Sumner Fuel. The adjacent property to the east was occupied by a variety of railroad shops (including a pipe shop, electrical shop, tool house, oil house, and welding shop) from at least 1955 to 1985. The adjacent property to the north was occupied by a variety of manufacturing companies (manufacturing batteries, brake liners, and nuts and bolts) from at least 1950 to 1980. From the 1950s through the 1980s the subject site appeared to be used as storage or overflow for one or both of these adjacent sites.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: This site was part of the Hoyt Street Railyard from 1911 to 1998, and was acquired by Hoyt Street Properties (HSP) in 1994 for urban residential redevelopment. HSP donated the site to the City of Portland in 2015 for development of affordable housing. Raleigh Housing entered into a Prospective Purchaser Agreement with DEQ in 2017 to clean up and redevelop the site. Over 3,900 tons of soils were excavated from the site in the summer of 2017, and the 12-story Vibrant Apartments building was constructed on the site. Residual contaminated soils remain at the site, but are capped by the building foundation and sidewalks. A 60-mil HDPE vapor barrier is also present beneath the building as an additional protective measure. A License and Declaration of Restrictions was recorded on the property deed requiring long-term maintenance of the cap and notification to DEQ if the cap is penetrated.

NARR Comments: (12/17/2015 KPD/ICP) The site was initially investigated as part of the Hoyt Street Railyard project (ECSI #1080). Soil samples were

HOYT STREET RAILYARD - BLOCK 15 (Continued) **S116734840**

collected from test pits at the site in September 1998 and were analyzed for diesel, oil and lead, finding up to 4,300 ppm diesel and 830 ppm lead. Additional soil samples were collected from 16 borings advanced through the streets surrounding the block in May 2003. Diesel (up to 3,840 ppm), heavy oils (up to 4,280 ppm), and lead (up to 1,280 ppm) were detected, along with numerous PAHs. A site-specific investigation was conducted in July 2012, with soil samples collected from 10 borings on the block. Heavy oils, lead and PAHs were detected in all of the analyzed samples, with by far the highest concentrations of lead and PAHs in boring DP-6, in the northeast corner of the block at 13-14 ft bgs.

NARR Comments: Prior to the start of construction in 2014 soils at the site consisted of 10-20 feet of fill material (a mixture of sands, silts, clays and industrial debris). Beneath the fill was 5-10 feet of sandy clay and/or silty clay (wetland soils) underlain by layers of sand and gravel to at least 90 ft bgs. Groundwater was encountered at depths from 12-15 ft bgs. The groundwater flow direction was north-northeast toward the Willamette River, approximately 850 feet from the site.

Decode for NarcdID: Remedial Action
NARR Comments: (12/17/2015 KPD/ICP) Remedial actions were initially conducted at the site in 2003 as part of the Hoyt Street Railyard project (ECSI #1080). Imported fill soils were brought in to raise the grade of the block and provide five feet of clean fill in the adjacent street rights-of-way. Geotextile markers were placed on the ground surfaces prior to fill placement. In August 2003, asbestos-containing materials were removed from steam tunnels that ran beneath the site. A License and Declaration of Restrictions, requiring that the block be capped with buildings, pavement, and/or 2-3 feet of clean soil, was recorded on the property deed in December 2013. Construction of the current condominium tower (<quot>Cosmopolitan on the Park<quot>) began in July 2014. Soils were excavated from the site from July to November 2014 and temporarily stockpiled on Block 24 of the former Railyard (three blocks NNW of the site). The stockpiled soils were shipped to landfills from October 2014 through March 2015. A total of 13,379 tons of soil were shipped to the Riverbend Landfill in McMinnville and 2,544 tons of soil were shipped to the Hillsboro Landfill.

NARR ID: 5755100

Decode for NarcdID: Site History
NARR Comments: The area around the site was originally a lake bed and marshlands connected to the Willamette River. The area was filled in with 10-20 feet of material in the late 1800s. The Hoyt Street Railyard was established by 1911 and operated through 1998. The Block 15 site was utilized as a paved parking lot (with a small community garden at the north end) from 2010 until 2014, when construction of the current condominium tower began.

ABANDONED TANNER CREEK SEWER (Continued) **S110479141**

NARR Comments: Contamination is present in and around the abandoned Tanner Creek Sewer located below NW 9th Avenue between NW Lovejoy and Northwest Marshall (at a minimum). Contamination has also been observed in the sewer near NW Naito beneath the Centennial Mill site. The suspected source of the contamination is the Pintsch gas plant that operated at the southeast corner of NW 9th and Lovejoy (on the current USPS site and adjoining Lovejoy Ramp) in the late 1800s and early 1900s. Contaminants are petroleum hydrocarbons, hydrocarbon constituents including VOCs and PAHs, and perhaps cyanide.

NARR Comments: The Abandoned Tanner Creek Sewer is a 72<quot> brick-lined arch-top sewer that was constructed in 1887 and abandoned in 1917, apparently due to structural issues. A newer Tanner Creek Sewer was subsequently installed beneath NW 10th Avenue, and is still in use. The Abandoned Tanner Creek Sewer runs beneath NW 9th Avenue, including immediately adjacent to the former Pintsch gas plant at NW 9th and Lovejoy. It is assumed that there were connections from the plant to the sewer; what appears to be gas plant-related waste including free product has been observed at a number of locations near/in the sewer during previous investigation work. The extent of contamination within and around the sewer is not fully known.

Decode for NarcdID: Project Issues Summary
NARR Comments: Investigation at both the Union Station-Horse Barn (ECSI#2407) and USPS (2183) sites has identified gas plant-type contamination both within and immediately around the Abandoned Tanner Creek Sewer. The suspected source of the contamination is releases from the Pintsch Gas Plant that operated at the southwest corner of NW 9th and Lovejoy in Portland in the late 1800s and early 1900s. DEQ has determined that contamination is not related to activities performed at either site during recent times. Contamination at/around the pipe has been identified at NW Lovejoy, NW Marshall, and near NW Naito in the general area of the Willamette River. Investigation is necessary to fully define the nature and extent of gas plant contamination associated with the sewer, and determine whether ongoing impacts to the Willamette River are possible. The (former) discharge point for the sewer lies within the Portland Harbor Study Area.

NARR Comments: (12/26/16 DJH/VCP) A draft report was submitted to DEQ in January 2015. PDC comments on the report were submitted to DEQ in May 2015. As of October 2015, DEQ review of submitted documents on hold because of time/priority constraints. Investigation Summary Report submitted in late 2015, and DEQ comments sent out in February 2016. Response to comments submitted by CH2M HILL in October 2016. In a October 12, 2016 letter response, DEQ requested immediate action to move site forward, otherwise the voluntary agreement would be terminated and enforcement pursued. A Revised Investigtion Summary Report was submitted to DEQ in December 2016 and is currently under review.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Dec. 2016] Portland Terminal RR has signed a voluntary agreement to complete an evaluation of contamination below NW 9th Avenue in the vicinity of NW Lovejoy. Contamination previously found in the subsurface in this area appears to be attributable to the Pintsch gas manufacturing facility that operated at the SE corner of NW 9th and Lovejoy in the late 1800s and early 1900s.

 The primary purpose of the investigation will be to determine whether subsurface contamination represents a potential threat to the Willamette River via <quot>facilitated transport<quot> in or around existiing subsurface utilities.

NARR Comments: The property is a 4,900 ft2 residential lot and a 2,943 ft2 residence located in Northeast Portland. The property contains a single-family two-story home with a basement and detached garage. The home was constructed in 1920 and renovated in 2007. In 2006, a release of heating oil from an underground storage tank (UST) on the south side of the residence was reported to DEQ s Heating Oil Tank (HOT) Program. Xavier Environmental removed the UST and excavated approximately 4.74 tons of contaminated soil from the property for disposal at Hillsboro landfill. Confirmation samples collected from the limits of excavation showed remaining levels of petroleum contamination in soil. Additional soil removal was not possible due to the proximity of the residence to the south and concern over undermining the foundation at the property. Xavier Environmental performed an additional investigation to determine the extent of remaining contamination in soil. No groundwater was encountered during the investigation. Additional soil samples collected beyond the excavation indicated that approximately 925 cubic yards of petroleum contaminated soil remained. Up to 38,600 mg/kg total petroleum hydrocarbons (TPH) were detected in residual soil, but concentrations of TPH, volatile organic compounds (VOCs), and polycyclic aromatic hydrocarbons (PAHs) were below applicable DEQ risk-based concentrations (RBCs) for residential exposure. In November of 2006, Xavier Environmental submitted a HOT certification report to DEQ indicating that the investigation was conducted in accordance with applicable federal, state, and local laws. DEQ s HOT Program registered the certification and closed the site on January 31, 2007. In 2007, the residence on the property underwent extensive renovation with a new, two-story residential structure constructed on the pre-existing foundation and expansion of the east side of the first floor over a crawlspace. Following the renovation, the property was purchased in August, 2007 and the occupants began experiencing unusual indoor odors and health impacts.

Updated By: RWELLS
Updated Date: 09/14/2012
Decode for NarcdID: Remedial Action
NARR Comments: In 2008, indoor air samples were collected in the basement of the residence by Bureau Veritas for VOC and formaldehyde analysis using methods TO-15 SIM low level and NIOSH 2016. Concentrations of carbon tetrachloride, benzene, and formaldehyde were observed at 7.2 ug/m3, 3.1 ug/m3, and 8.7 ug/m3 respectively, which exceeded the DEQ s residential air RBCs of 0.41 ug/m3, 0.31 ug/m3, and 0.19 ug/m3, respectively. It should be noted, however, that carbon tetrachloride and formaldehyde are not commonly associated with heating oil. In May 2009, PBS Engineering and Environmental conducted a site investigation that included the collection of soil, sub-slab soil vapor, and indoor air samples to determine if indoor air quality concerns were associated with remaining levels of petroleum contaminated soil. Two soil samples were collected from the east and west ends of the former UST cavity and analyzed for TPH-diesel (TPH-Dx), VOCs and PAHs. TPH-Dx was detected at 6,290 mg/kg on the west end of the UST cavity and 16,000 mg/kg on the east end. Ethylbenzene was detected at 0.832 mg/kg from the sample collected on the east end of the UST cavity, which slightly exceeds the vapor intrusion soil RBC of 0.82 mg/kg. The soil sampling data reflected the information presented in the 2006 Xavier Environmental HOT certification report. Three sub-slab soil vapor samples were collected through the southern basement foundation wall and analyzed for VOCs by method TO-15, and TPH-Dx and naphthalene by method TO-17. None of the contaminants detected were above residential soil vapor RBCs. It should be noted that a leak was present in the sub-slab sampling train, which could have resulted in biased low concentrations of contaminants in the sample results. Indoor air samples were collected from the first floor, the basement, and the crawl space of the home. One outdoor air sample was also collected from the porch on the east side of the residence. Air samples were analyzed for TPH-Dx using method TO-17, naphthalene and VOCs using method TO-15, and formaldehyde using method TO-11A. TPH-Dx concentrations were below the residential RBC of 100 ug/m3 in all air samples. Naphthalene and benzene concentrations were above the residential RBCs of 0.072 ug/m3 and 0.31 ug/m3, respectively, for all samples collected. However, the samples collected from the basement and crawlspace had lower concentrations of contaminants than the samples collected on the first floor of the residence. In addition, levels of ethylbenzene and 1,2,4 trimethylbenzene were not detected in the basement and crawlspace, but were above their respective residential RBCs of 0.97 ug/m3 and 7.3 ug/m3 on the first floor or the residence. Formaldehyde was also present above the residential RBC of 0.19 ug/m3 in all of the air samples collected from inside of the residence, however the concentrations of formaldehyde in the basement and crawlspace samples were less than the concentrations found on the first floor of the residence. As stated previously, formaldehyde is not typically associated with heating oil. The concentrations of contaminants in the outdoor air sample collected from the east side of the residence had generally lower concentrations of contaminants than samples collected inside of the residence. The PBS report concluded that remaining levels of petroleum impacted soil did not appear to be the source of indoor air quality concerns, because higher levels of contaminants were found on the first floor, rather than the basement and crawlspace of the

WARKOV RESIDENCE (Continued) **S108246704**

residence immediately adjacent to the remaining contamination. PBS suggested that off-gassing VOCs from new building materials could be the source of the air quality issues. In June of 2010, Kennedy/Jenks Consultants conducted an indoor air, ambient air, and sub-slab soil vapor investigation to determine if remaining levels of petroleum contaminated soil was adversely affecting indoor air quality. Three sub-slab soil vapor samples were collected through the basement floor nearest to the south wall of the residence. Two air samples were collected from the first floor of the residence, one air sample was collected from the crawlspace, and one air sample was collected from the basement. One outdoor ambient air sample was collected from the porch located on the west side of the residence. All air and soil vapor samples were analyzed for TPH-Dx and naphthalene using method TO-17, and VOCs using method TO-15. Similar to the indoor air samples presented in the 2009 PBS indoor air assessment, levels of contaminants, including naphthalene and TPH-Dx, were detected at higher concentrations on the first floor of the residence than in the basement or crawlspace. For all indoor air samples, concentrations of naphthalene and benzene exceeded their respective residential RBCs, however TPH-Dx levels did not exceed the residential RBC of 100 ug/m3. Concentrations of contaminants detected in the outdoor air sample collected on the west side of the residence were below all residential RBCs and were generally similar or less than the concentrations of contaminants detected in the indoor air samples collected on the first floor or the residence. All soil vapor samples were below residential RBCs for VOCs and TPH-Dx. Naphthalene was detected in one of the three soil vapor samples at 16 ug/m3, which modestly exceeded the residential RBC. Similar to the conclusion of the PBS report, the Kennedy/Jenks report did not identify a sub-surface source that was adversely affecting indoor air. Between 2009 and 2011, EcoTech LLC and Evren Northwest LLC conducted a soil, soil vapor, and sub-slab vapor investigation and risk assessment to confirm indoor air and soil vapor findings from previous investigations and to determine a current estimate of remaining petroleum impacted soil at the property. Soil samples were collected for TPH-Dx, benzene, ethylbenzene, toluene, xylene, and naphthalene analysis from within and to the north, west, and east of the former UST cavity. The concentrations of contaminants in soil and the vertical extent of contamination was generally similar to the findings presented in the Xavier HOT decommissioning report and showed TPH-Dx levels beginning at ten feet below the ground surface (bgs) and extending to between 25 to 28 feet bgs. TPH-Dx concentrations were non-detect at 28 feet bgs. No groundwater was encountered The lateral extent of soil contamination to the north was assessed by completing three soil borings through the basement floor of the residence to approximately 18 feet bgs and to the east and west by completing eight soil borings outside of the former UST excavation to 28 feet bgs. Based on the soil analyses, the current extent of remaining petroleum contaminated soil was estimated at 502 yd3. This volume is almost half of the estimate previously presented by Xavier Environmental in the 2006 HOT decommissioning report. Xavier Environmental s estimate was based on a conservative model that assumed the extent of petroleum contaminated soil extended under the entire eastern footprint of the residence. Soil vapor samples were collected for TPH-Dx, benzene, ethylbenzene, naphthalene, toluene, and xylene analysis from four locations through the basement floor (sub-slab), two locations adjacent to the former UST cavity

WARKOV RESIDENCE (Continued) **S108246704**

south of the residence foundation, and two locations north of the residence foundation. All of the soil vapor samples collected from outside of the residence foundation were below residential soil vapor RBCs for all contaminants of concern. Two of the four soil vapor samples collected from through the basement floor (sub-slab) had concentrations of naphthalene above the residential RBC of 14 ug/m3, however levels of TPH-Dx, benzene, ethylbenzene, toluene, and xylene were below their respective RBCs. Risk Assessment- Using data collected from this and previous investigations, EcoTech, LLC and Evren Northwest, Inc performed a risk assessment to determine if site conditions associated with remaining petroleum contaminated soil posed a risk to human health and the environment. Current and future residential exposure from volatilization to indoor air and future construction and excavation worker exposure through direct contact with remaining petroleum contaminated soil were identified as potential receptors and exposure pathways in the conceptual site model. No ecological receptors or sensitive environments were identified. Contaminants of concern at the site are associated with remaining levels of petroleum contaminated soil from the release of the HOT. These contaminants include: TPH-Dx, benzene, ethylbenzene, and naphthalene. Concentrations of TPH-Dx in soil are above the residential and construction worker RBCs of 1,100 mg/kg and 4,600 mg/kg, respectively, beginning at five feet bgs. However, resident and construction worker exposure is expected to occur in the upper 3 feet. Therefore, contamination present at a depth greater than five feet bgs is unlikely to pose a risk to residential and construction worker receptors. Concentrations of contaminants in soil vapor are above residential RBCs for naphthalene but below RBCs for all other contaminants of concern. To determine the risk associated with concentrations of naphthalene in soil vapor, an exposure point concentration equivalent to the 90% upper confidence level (UCL) of the arithmetic mean was calculated using the Kaplan-Meier method from the Environmental Protection Agency s ProUCL-90 statistical modeling program. This method is reflective of actual site conditions and assumes that a person will randomly move within the interior of the residence and not spend the majority of time near the highest naphthalene concentrations detected at the property.

NARR Comments: Using data collected from this and previous investigations, EcoTech, LLC and Evren Northwest, Inc performed a risk assessment to determine if site conditions associated with remaining petroleum contaminated soil posed a risk to human health and the environment. Current and future residential exposure from volatilization to indoor air and future construction and excavation worker exposure through direct contact with remaining petroleum contaminated soil were identified as potential receptors and exposure pathways in the conceptual site model. No ecological receptors or sensitive environments were identified. Contaminants of concern at the site are associated with remaining levels of petroleum contaminated soil from the release of the HOT. These contaminants include: TPH-Dx, benzene, ethylbenzene,

WARKOV RESIDENCE (Continued) **S108246704**

and naphthalene. Concentrations of TPH-Dx in soil are above the residential and construction worker RBCs of 1,100 mg/kg and 4,600 mg/kg, respectively, beginning at five feet bgs. However, resident and construction worker exposure is expected to occur in the upper 3 feet. Therefore, contamination present at a depth greater than five feet bgs is unlikely to pose a risk to residential and construction worker receptors. Concentrations of contaminants in soil vapor are above residential RBCs for naphthalene but below RBCs for all other contaminants of concern. To determine the risk associated with concentrations of naphthalene in soil vapor, an exposure point concentration equivalent to the 90% upper confidence level (UCL) of the arithmetic mean was calculated using the Kaplan-Meier method from the Environmental Protection Agency s ProUCL-90 statistical modeling program. This method is reflective of actual site conditions and assumes that a person will randomly move within the interior of the residence and not spend the majority of time near the highest naphthalene concentrations detected at the property. The 90% UCL for naphthalene concentrations at the site was determined to be 12.25 ug/m3, which is below the residential RBC of 14 ug/m3. In addition, previous indoor and ambient air sampling has shown that the highest concentrations of contaminants of concern, including those that are not associated with heating oil, were found on the main floor of the residence and not in the basement or crawlspace. Therefore, it does not appear that remaining petroleum contaminated soil immediately adjacent to the south foundation basement wall or underneath the basement slab is the source of indoor air quality concerns, or that the soil vapor to indoor air pathway for petroleum-related contamination is complete. Conclusions DEQ has determined that the remaining petroleum contaminated soil does not present a risk to human health or the environment, and that no further action is required to address hazardous substances related to the release from the HOT. This decision was based on assessing risk to people and the environment from remaining petroleum contaminated soil, and does not make a determination on the source of other contaminants that may be impacting indoor air quality. Should the residual soil be excavated or otherwise disturbed below five feet during future site development, construction workers should be notified of the remaining petroleum contaminated soil and provided appropriate personal protective equipment. In addition, affected soils should be managed and disposed of according to all applicable local, county and state solid waste regulations.

Updated Date: 11/20/2017
Decode for NarcdID: Site History
NARR Comments: The site was first developed by the Northern Pacific Terminal Company of Oregon between 1890 and 1906 with a railroad engine house and warehouse. The City of Portland acquired the site in 1913 and constructed a fire house. The fire house was operated by the Portland Fire Department until about 1950. The site was conveyed back to Northern Pacific (subsequently known as the Portland Terminal Railroad Company) in 1953. PTRR used the fire house as a carpenter shop until 1980 and then as a small office space. The Portland Development Commission (PDC) acquired the site in 1987, and leased the fire house as office space until 1997. The building has remained vacant since then.

NARR Comments:	The site formerly had USTs that were decommissioned in 1991. Primarily diesel and heavy oil range TPH, along with some associated volatile organic compounds associated with the UST release were detected in soil. During a Phase II ESA perfomed in January 2013, soil samples collected from the vicinity of the former UST contained gasoline, diesel and heavy oil, selected VOCs and PAHs. Also detected in the samples were low levels of PBCs. PAHs were detected in soil at concentrations exceeding urban residential RBCs for the direct contact pathway, although at a depth greater than three feet bgs. PCBs were detected in at concentrations below urban residential RBCs for direct contact and at depths exceeding three feet bgs. (JKS 3-25-14)

Updated Date: 07/31/2018
Decode for NarcdID: Current Site Summary Statement
NARR Comments: DEQ issued non-binding opinion letters regarding the likelihood of requiring further action at the site in 2014. This was possible because the owner at that time was not seeking a No Further Action determination. In February 2016, the new property owner entered the VCP. The plan is to construct two 6-story commercial buildings with sub-grade parking. As a result, the top 19 feet of soil over most of the property will be removed. The owner's consultant (GeoDesign) submitted a Contaminated Media Management Plan describing soil management and confirmation sampling procedures. Due to the location of the site in the Portland Harbor, some consideration of source control will be necessary. Based on consultation with the City of Portland and DEQ's Stormwater Coordinator, the stormwater pathway can be excluded. Some evaluation of the groundwater pathway will be required before the site can be considered for No Further Action status (JKS 5-11-16). In August 2016 Park Office LLC installed eight monitoring wells around the perimeter of the site property for dewatering purpses. The wells were constructed of 4-inch PVC and screened from 20 to 25 feet bgs. Between August and December 2016, soil was removed to depths ranging from 15 to 20 feet bgs across the majority of the site. A total of 32,155 tons of soil was removed from the site and disposed at Riverbend Landfill in McMinnville. Composite soil samples were collected from the floor and sidewalls of the excavation. PAHs were detected in the samples but not at concentrations above the most stringent RBCs. PCBs were detected in only two of 19 confirmation samples. Arsenic was detected in the confirmation samples but not above natural background levels for the area. In March 2017 samples were collected from the wells on the down-gradient side of the property. Diesel and heavy oil range hydrodarbons were not detcted in wells MW-1 through MW-4. Based on the limited occurrence of PCBs, VOCs and PAHs in soil and groundwater prior to the mass removal, groundwater samples from the wells were not analyzed for these compounds. Arsenic (total and dissolved) were detected in the groundwater samples at levels consisent with natural background. The final Source Control Evaluation for the site was submitted by GeoDesign in February 2018. Draft Source Control Decision was prepared in June 2018 and distributed to EPA and its partners. EPA agreed the site was a low priority and as a result, did not perform a formal review of the SCD. In June 2018, The Five Tribes provided comment on the draft SCD. DEQ addressed the comments in a written response and made accompanying edits to the SCD. No comments were received from the Yakama Nation. The SCD was finalized on July 2, 2018. Formal remedy selection was not necessary, owing to the widespread construction related excavation work associated with construction. Low levels of soil contamination remain in the

RAPID TRANSFER CO. (FORMER) (Continued) **S115330275**

excavation footprint but are covered with buildings and associated hardscaping. Storm water will be managed in accordance with the City of Portland's Stormwater Manual. Site qualifies for site-wide NFA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/27/2020

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

RGA LUST: Recovered Government Archive Leaking Underground Storage Tank

The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Quality in Oregon.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 12/27/2013
Number of Days to Update: 179

Source: Department of Environmental Quality
Telephone: N/A
Last EDR Contact: 06/01/2012
Next Scheduled EDR Contact: N/A
Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 01/01/2019
Date Data Arrived at EDR: 05/01/2019
Date Made Active in Reports: 06/21/2019
Number of Days to Update: 51

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

RUSSELL WILLIAMS BLOCK
N NORTH PORTLAND RD
PORTLAND, OR 97227

TARGET PROPERTY COORDINATES

Latitude (North):	45.541528 - 45° 32' 29.50''
Longitude (West):	122.667424 - 122° 40' 2.73''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	525964.8
UTM Y (Meters):	5042946.5
Elevation:	162 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	6067252 PORTLAND, OR
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

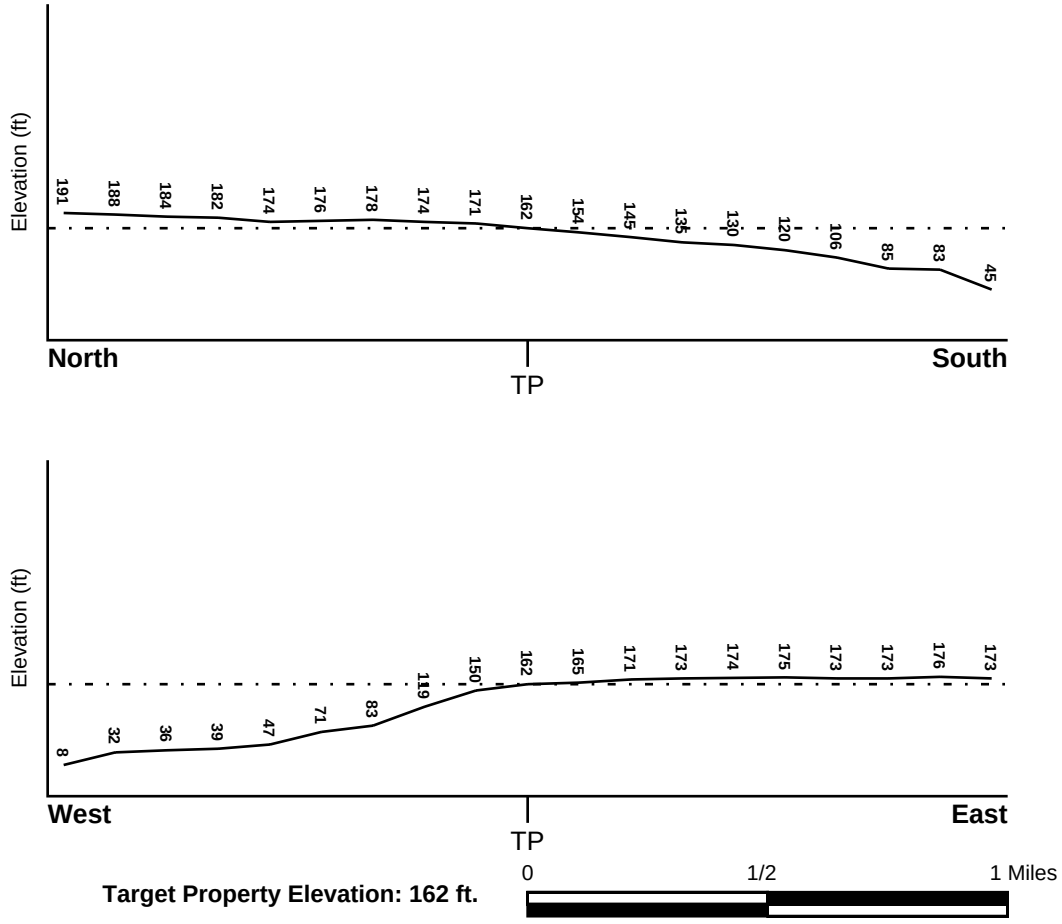
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830091E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830087E	FEMA FIRM Flood data
4101830020D	FEMA Q3 Flood data
4101830035D	FEMA Q3 Flood data
4101830040C	FEMA Q3 Flood data
4101830093E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory Data

Telephone: 503-378-2166

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Radon Levels in Orgeon

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
